Exterior Renovations	275,000	Previously Approved	
	275,000	State Funds - Capital Reserve Fund	275,000
			275,000

Description

The exterior windows of the administrative office area and public use areas of the SC Aeronautics Commission needs to be replaced. The building's windows have begun to show signs of delamination between the panes, and some have had repair work done for leaks. This project requires removal and replacement of the building's exterior windows. The estimated costs are \$75,000.

The exterior of the administrative office area of the SC Aeronautics Commission needs to be painted. The building exterior has begun to show signs of corrosion, which if left untreated would lead to additional maintenance costs in the future. The project requires cleaning and prep work to prepare the surface for paint. The cost are estimated to be \$200,000.

	300,000	State Funds - Capital Reserve Fund	300,000
			300,000

Description

The Main Hangar, Guard Building, and Quonset Hangars have roof leaks that have been patched over time. Due to the age, deterioration, and added damages that continue to develop, it is time to replace the roof coverings on all three buildings. The Main Hangar and Guard Building have roof coatings that can have similar roof replacement products while the Quonset Hangar will need a specialty foam/coating product. Also, the Quonset Hangar will require some sheet metal and paint work on each of its ends. If left unresolved, additional maintenance costs will continue to occur and expand over time. The project requires cleaning and prep work to remove the old roof systems and/or coatings. The estimated costs are \$300,000.

Proposed Permanent Improvement Project Details

Aiken Technical College

Description

Description - ATC proposes to construct a 30,000 square foot building to house the expansion of the Health Science Technologies. This new building would house the Associate Degree in Nursing (ADN) PROGRAM, the Certified Nursing Assistant (CNA) program, the Licensed Practical Nursing (LPN) program and the Emergency Medical Technician (EMT) program. The courses encompass classroom and laboratory study. This building will assist the College in meeting accreditation standards and demand for the programs. Upon relocation of the Nursing programs to the Nursing building the available space in the current Health Sciences building will be utilized to enhance existing programs and expand with additional offerings in the Health Sciences. The Surgical Technology program is proposing expansion to an Associate Degree Surgical Technology. The Medical Coding certificate is proposed to expand to a Health Information Management degree. The Radiological Technology degree proposes to add a Sonography component. A Dental Hygiene Associate Degree is proposed to augment the Dental Assistant diploma. New programs proposed include Pharmacy Technology, Cardiovascular Technology, BIO/Med Laboratory Technology and Dialysis Technicians. Construction of the proposed building will be on College property. No new acreage is required.

Justification - The current Health Sciences building lacks available space for expansion of the Life Science programs necessary to meet the College's service area demand. The addition of a building to house Life Science programs would create available space in the existing Health Sciences building for the remaining Health Science programs to expand.

Alternatives - All available space for academic programs on the Aiken Technical College campus was reviewed and none was found suitable for the Health Science Technologies. The addition of a new building to house the Nursing programs creates available space for the remaining Health Science programs and this was deemed the most appropriate response to meet the growing demand in the community within this field.

Description

Aiken Technical College requests support for the renovation of the second floor of the Ashley J. Little Building. The Ashley J. Little Building is the oldest building on campus, constructed in 1973, and the second floor has never undergone a full renovation. The renovated classroom space would increase the College’s ability to offer technologically updated specialized learning spaces that will attract increasing numbers of STEM and high demand students.

There is a need to expand and/or enhance current offerings in our Science, Technology, Engineering, and Mathematics (STEM) programs to meet area demand. Plans for growth in STEM programs are impeded by the inadequacy of the facilities. The College is preparing new course offerings at the request of incoming and expanding businesses and industries that are dependent on modern teaching and learning spaces. Adding modern classrooms and lecture facilities to the Ashley J. Little building will provide space for expansion of our STEM courses in support of our workforce development initiatives.

The College continuously looks for ways to operate facilities more efficiently and can move aggressively to improve operating systems and work flow with the proposed renovation. Additional classrooms and lecture space will take advantage of more effective technology resulting in operating efficiencies when compared to existing building conditions.

Description

The Gregg-Graniteville Student Activities Center will be renovated to enhance services, spaces and programs for the college. When completed, the student activities center will offer much needed meeting space to provide support for student organization events, departmental functions and college-wide activities. Student Involvement fosters engagement in student-led programs and services that enrich the education experience by maximizing the capacity of students to learn, serve and lead. The renovation will also enhance auxiliary services for the college community.

The completed project provides a core of activity for the campus and expresses the college's commitment to the value of the student experience on campus.

--------------------------------	-------------------	---------------	---------------

Description

Description - Aiken Technical College proposes the renovation of its 300 building. The building is currently vacant and needs health and safety improvements. Completed renovation will result in new educational classrooms to augment existing STEM education. Graduates from academic programs with an intensive STEM focus such as engineering, manufacturing, nuclear, and technology are in high demand to meet the growing workforce development needs of Aiken County.

Justification - In its present state the 300 building is totally unusable without renovation – thus prohibiting the utilization of 9,398 square feet of vacant space. This space is vital if ATC is to meet workforce development demands from academic programs that require STEM education.

There has been no significant renovation to the 300 building since it was built in 1973. Building code changes and improvements to construction standards have left the facility with some health and well-being issues. The original construction of the 300 building did not include restrooms, and the addition of restrooms would be required for the renovations in order to meet all ADA requirements. The building would also require lead paint and asbestos abatement.

This project will include interior building renovations to enhance large STEM classroom and lab spaces as well as exterior improvements. The building is substantially vacated and immediately ready for renovation.

Useful Building Life & Local Match - According to a 2010 Building Condition Survey Report, the replacement value of the building is approximately \$2.4 million which is estimated at a construction cost of \$258/square foot. This is in comparison to the estimated renovation cost of \$100/square foot. The Survey Report indicated that the 300 building has a useful life of 76%, which also makes it a good candidate for renovation, in addition to the per square foot cost savings comparison.

The total cost of the project is \$940,000 and the College is has received \$640,000 in funding. The College will contribute \$300,000 of the cost from existing local funds.

Description

Replace and upgrade HVAC, lighting, and fire alarm system at main and F.E. Dubose campuses that have exceeded life expectancy in multiple buildings. Fire alarm systems in the College's older facilities need to be integrated with emergency notification systems, web access, and other features not available when originally installed. Upgrade T8 lighting to LED in buildings in order to reduce energy costs. Parking lots with large potholes and tree roots need to be resurfaced and leveled. These replacements and upgrades are needed in order to keep the College's facilities operating efficiently and to avoid deferring needed replacements as systems reach the end of their useful lives. The alternative is to defer replacing systems until they no longer function and/or cannot be repaired. In the case of HVAC and lighting, this also costs more in operating costs as the older systems are less energy efficient.

Description

Construct an additional academic building on recently purchased property adjacent to the College's Kershaw campus. The population in this county is growing and the needs are outpacing the College's available space for instruction. The County is currently recruiting industry for one of the few megasites in the state. The existing facility was recently expanded, but there is already not enough space to offer all of the training industry requires, and it is just a matter of time before a new large industry locates in the County, and the College may not be able to fulfill its training needs. This project is for a 30,000 square foot academic building with several training labs for mechatronics and other programs needed by local industry. The alternative is to do nothing, which would not serve local industry needs.

Description

The A.A.S. Natural Resources Management program occupies approximately 100 acres of multiple use land for teaching Forestry, GPS/GIS, Horticulture, Natural History, and a variety of other program areas. Students help to maintain the property as part of the curriculum using large machinery and tools required for the Natural Resources Management (NRM) profession. The property is leased by the college on an annual basis from Sumter County for a nominal fee. The land is near the Sumter Airport and an industrial park. These assets make the property appealing to potential commercial/ industrial developers. The County is interested in repurposing this property for economic development and the college would no longer have access to the property. The facilities used by the NRM program are in need of updating, but renovations are not feasible considering the college does not own the property. The College is evaluating the potential for use of approximately 130 acres, located in Sumter and Clarendon counties near Rimini, SC. This property will be provided at no cost by the Pinewood Development Authority. Phase one of the plan would involve developing the property for multiple NRM uses, construction of a classroom building (approximately 10,000 square feet), and installation of technology infrastructure sufficient to support an outreach campus. The campus would encompass state-of-the-art classrooms and labs, an industrial greenhouse, agricultural fields, forestry management acreage, and easy access to Lake Marion.

Description

Renovate entrances, circulation areas, and office space in buildings 100, 200 & 400. The entrances need to be made more welcoming, modern, and stand out as the entrance. Some of the offices in 400 need to be reconfigured and a hallway added that will create separate entrances to rooms instead of having to go through classrooms to reach certain rooms. The building uses have changed over the years, and some of the spaces we use for offices are now difficult to get to. The alternative is to leave as is, which reduces efficiency and room utilization.

Description

Construction of new student services building for main campus. This is proposed to be a 2 story, 23,000 square foot building to house student services (including admissions, financial aid, testing center, etc), bookstore, auxiliary services and other student services related space. The College has very limited support space and is always having to rearrange offices to accomodate new grants and faculty offices. This facility would allow all of student services to be housed in one building and provide more adequate space for faculty offices and grant programs, as well as bookstore and food service. The College is land locked at main campus, so that the only alternative is to maintain the status quo. This is not a good option, as it limits growth and the College's ability to apply for and receive grants that can provide crucial services for our students.

Description

Replace and upgrade roofing, HVAC, electrical and plumbing at main and F.E. Dubose campuses that have exceeded life expectancy in multiple buildings. These replacements and upgrades are needed in order to keep the College's facilities operating efficiently and to avoid deferring needed replacements as systems reach the end of their useful lives. The alternative is to defer replacing systems until they no longer function and/or cannot be repaired.

Description

This project is to renovate approximately 20,000 square feet of a 34,000 square foot building to house the Water Resources Center and establish a programmatic base for the comprehensive water resources program. The building originally housed Environmental Toxicology research and includes lab and meeting spaces. The renovations will include making building improvements to conduct virtual meetings, on-site training and webinars, replacing building systems and finishes, creating needed office space, and installing new laboratory instruments and equipment.

The building was constructed in 1991 and only a portion of it, renovated in 2016-17, has not been renovated since that time. Its building systems are more than 27 years old, nearing the end of their useful lives and no longer efficient. The near-campus building location is ideal for research, monitoring, analysis, and technical instruction and the site's landscape includes opportunities for research that corresponds with community needs in managing polluted runoff affecting SC waterways. The renovation will allow the team of water resources experts to be consolidated in one location to conduct analytical, water-related research and provide research-based natural resources management, outreach, instruction and demonstration. The building's proximity to campus and research space will unify staff and create capacity for more collaborative research supported by grants and private funding.

Clemson has requested \$7 million in state appropriated funds for this project in the last two years and the General Assembly has appropriated \$5 million, which will be used to renovate portions of the space. Clemson anticipates a budget request of \$2 million for FY 20-21 to complete all needed renovations.

Description

This project is to construct an approximately 30,000 square foot, climate-controlled conference center and a 45,000 square foot, covered open-air arena to expand the equine facilities at the T. Ed Garrison Arena. The Garrison Arena, located near the Clemson campus, is an event venue for livestock and equine events that draws participants and spectators from throughout the Southeast and increases the national reputation of South Carolina's cattle, equine and other agriculture-based industries.

The proposed facility improvements will attract additional large-scale events to the arena and provide meeting, instructional and exhibition spaces that are not currently available in the upstate. The conference center will allow Clemson PSA to recruit regional and national events and trade shows in the Horticultural, Livestock, Small Animal, and Agriculture Equipment industries. The facility will allow Clemson to expand its ability to have educational events for 4-H, FFA and other agriculture youth events. It will also serve the educational needs of the University as a venue for student-centered events and indoor experiential lab space and will further allow Clemson to partner with the surrounding counties and municipalities to host events in the region.

Clemson has requested \$11 million in state appropriated funds for this project in recent years and the General Assembly has appropriated \$7.8 million to date. Clemson anticipates a budget request of \$3.2 million for FY 20-21 to complete funding for the facility.

Description

This project is to provide and expand graduate student housing facilities at the six Research and Education Centers (REC) across the state. The project will provide for the development of new housing for graduate students and visiting scientists as well as the renovation and expansion of existing housing that is currently available at each of the six RECs across the state.

With the addition of 23 scientist positions over the last five years, the demand for additional graduate students to study and conduct research at the six RECs has also grown. Demand for student housing at the RECs has far exceeded the space available for students. The ability to add additional graduate students to study and conduct research at the off-campus RECs will expand the capability of the scientists to conduct research in all regions of the state and provide the state's agriculture and natural resources industry with Masters and PhD trained agriculturists who can help address agriculture and natural resources problems facing South Carolina.

			45,500

Description

This project is to construct an approximately 7,000 square foot research support building for the Baruch Institute of Coastal Ecology and Forest Science in Georgetown, SC. Conceptual designs for the new facility were developed by the Clemson Architecture program. The new building will consist of approximately 6,000 square feet of research space with the balance in restrooms, space for mechanical systems, and hallways. Existing instrumentation will be moved from its current location into the new building and existing space will be repurposed for teaching, grad student space, and flexible project use. Students will be moved out of the attic of Building A, which will also be repurposed for data and sample archiving.

The Institute has doubled the size of its faculty and staff in the last five years and increased the number of graduate and undergraduate research programs at the site. Along with the investment in new faculty has come new research lines which require specialized space. The Institute has 12 faculty, 6 research technicians, 16 graduate and post-doctoral students, and 8-13 summer undergraduate interns, all using approximately 2,229 square feet of lab and research support space, which is about 40% the recommended amount for a viable research program.

Design studies concluded that an addition to the existing building would require the same amount of new space, as current space is over capacity and would be unsuitable for remodeling for the instrument needs of the research program. Multiple new building design options were also considered. The new construction and subsequent repurposing of existing space works best with environmental restrictions at the site.

Description

This project is to construct three new greenhouse facilities at the Pee Dee Research and Education Center (REC). The formation of the Advanced Plant Technology Center at the Pee Dee REC has increased the demands for greenhouse space to support plant breeding programs. The three new greenhouses will support these plant breeding research programs.

Clemson has explored other alternatives and retrofitted existing greenhouse space at the REC as much as possible, which has aided in meeting greenhouse needs; however, the existing greenhouses are not suited for summer use. Construction of modern greenhouses will provide additional winter greenhouse space and provide needed summer space for these programs.

Description

This project is to renovate the existing lab space at Edisto Research and Education Center (REC) to accommodate modern day laboratory needs and analytical equipment. The laboratories at the Edisto REC were originally built as temporary space 35 years ago and were designed prior to the widespread use of desktop computers and laboratory equipment necessary for analysis of plant and soil samples. With the addition of new faculty and modern equipment to support their research programs, the lab facilities are ill-suited to the needs of current research scientists. In addition, existing electrical and HVAC systems in these buildings are inadequate to support equipment and server infrastructure, which prevents any further equipment from being installed and shortens the life and efficiency of existing computer servers housed in the buildings.

The only alternative to renovating this facility would be to build a new lab facility at a much higher cost.

Proposed Permanent Improvement Project Details

Clemson University Public Service and Agriculture

Description

This project is to make needed improvements to the Morgan Poultry Center at the Simpson Research and Education Center (REC). Almost all of the current research barns and facilities at the Morgan Poultry Center were constructed prior to or during the 1970s. The addition of new, active research scientists in the areas of poultry nutrition, food safety, genetics and animal behavior have created long waiting lists for facility use which constrains the amount of research that the facility can support.

The needed work will include upgrading the water and electrical infrastructure on the farm, modernizing research house equipment, and constructing new poultry research units to expand capacity for research. Four existing barns will also be modernized to meet current poultry industry standards for cooling, heating, lighting, water/feed delivery and ventilation. New facilities are necessary to provide (1) space for food safety studies involving salmonella, listeria and other pathogens, (2) facilities and equipment suitable for feed metabolism studies, and (3) facilities suitable for cage layer and aviary research. Further, the entire underground farm water system is composed of galvanized water lines containing extensive iron buildup, limiting flow and impacting water quality for birds. These lines will be replaced from the main water line to all existing and new structures. The existing on-farm power will also be upgraded to allow an automatic whole farm backup generator installation.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Clemson University

Description

This project is to renovate the 68,000 square foot Daniel Hall general classroom building and expand the facility by approximately 60,000 square feet. The renovations will include upgrading the HVAC and fire protection systems, improving accessibility, replacing exterior doors, improving the auditorium and repainting classroom walls. The expansion will include constructing new classrooms, a new 220-seat auditorium, and informal learning spaces.

As design progressed during Phase I, several major issues were uncovered that were not included in the Phase I estimate that must be addressed and that require an increase in the project cost. Site complexity issues include the need for connections at multiple grade elevations and for reconfiguring a portion of the Cooper Bridge to achieve ADA accessibility and for additional site utility work due to the need to replace the aging utility tunnel and run new utilities not anticipated. Renovation costs will be higher due to higher-than-expected construction escalation, particularly in the mechanical, electrical and plumbing trades, and the structural limitations of the existing Daniel Hall, which prevent installing a modern HVAC system either in the current space or on the roof. These limitations were not identified in the feasibility study and will require a west addition, which will accommodate the needed HVAC equipment, enhanced ADA accessibility from the front of the building, and needed collaborative study spaces on each floor limited by the existing facility's configuration and design. Other additional costs result from increases in the cost of steel and additional audiovisual and other equipment needed for a modern classroom building. As the project progressed, the University and design team continued to closely evaluate the needs of the project scope to provide the best value. As a result, the expansion has been reduced to 60,000 square feet, which the University feels provides a better cost/benefit tradeoff.

Daniel Hall was constructed in 1969 and has had minimal renovations since. It is the principal classroom building for and affects nearly every undergraduate student during their enrollment. While Daniel Hall has been well maintained and is in good condition, a complete renovation has not been possible due to heavy course loads and therefore, it is functionally deficient. The expansion will free up the current space and allow renovation without having a detrimental impact on classroom availability and utilization. Since Daniel Hall's construction, enrollment has increased from 6,700 to approximately 25,000 students and is projected to grow another 20% over the next ten years. Expansion is needed to support growing enrollment and to address limited classroom availability and high utilization throughout campus. It will also allow for continuing core undergraduate instruction in an effective learning environment without disruptions from the existing facility's renovation.

--------------------------------	-------------------	---------------	---------------

Description

This project is to renovate the approximately 94,000 square foot Lehotsky Hall, which houses the College of Agriculture, Forestry and Environmental Sciences and the College of Behavioral, Social and Health Sciences. The programs housed in the facility generated 20,819 student credit hours in 2017-18. The renovation will include replacing the HVAC system, making structural reinforcements, installing a fire sprinkler system, making electrical, plumbing, information technology, and ADA improvements, and upgrading the building envelope and building finishes. It will also include reprogramming portions of the interior space and reconfiguring floorplans to meet functional and academic needs.

Lehotsky Hall is 42 years old and is one of the most energy inefficient buildings on the Clemson campus. Its building systems are original to the facility and do not meet current building code requirements. The fire sprinkler and plumbing systems serving the labs are not compliant with current code requirements and need to be modified to ensure occupant safety.

	8,000,000		

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

This project is to make improvements by replacing and upgrading facilities at the Wastewater Treatment Plant that serves Clemson University. The work will include improving the biological process and clarification equipment, providing additional biological process redundancy, installing equipment for biological process equalization and for automation and remote monitoring capabilities, and making wastewater collection system improvements.

The original plant was constructed in 1964 when the main campus enrollment was less than 5,000 students, with current enrollment approximately 25,000. Due to the installation of water conservation measures in recent years, the projected flow is not expected to exceed the design average daily flow over the next 20 years. However, much of the equipment is more than 45 years old, which impacts the system's reliability, redundancy, and operational flexibility. In addition, because the facility is not manned 24/7 and only a portion of the plant is on the plant's control system, there is a need to improve automation, remote monitoring and control capabilities to serve current and future campus facilities.

Recent regulatory findings on sanitary sewer collection piping under DHEC and EPA programs have revealed significant deficiencies in the University's aging underground sewer collection infrastructure, where piping and manhole structures have reached the end of their useful lives and need rehabilitation. Implementing collection system piping rehabilitation as part of this project will expedite the compliance process and provide economies of scale cost savings.

The only viable alternative is to construct a new wastewater treatment plant, which would be more costly.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Clemson University

Description

This project is to create a safer environment for students in the middle of campus while revitalizing the area with student-centered programs. A significant portion of the project will involve constructing replacement facilities at the Ravenel Center to relocate University facilities and related departments from the campus core to the perimeter to increase student safety. The replacement facilities will include constructing approximately 30,000 square feet of office space and approximately 35,000 square feet of shop, warehouse, storage and shed spaces. The project will also address renovating approximately 34,000 square feet of subsequently vacated space for student-oriented uses, such as the Campus Activities Department, the Office of Community and Ethical Standards and other associated programs.

Most maintenance, utility, custodial and associated staff for the University are located in deteriorating space in the heart of the student residential and recreation district. Facilities maintenance shops and warehouses are located within 30 yards of the recently completed Core Campus Residence Hall and are in a path that impedes student movement between main residential areas, student parking and the Fike Recreation Center. Due to the nature of activities performed by the facilities staff, the University has determined it would be safer to relocate these departments outside the core campus. This will remove approximately 100 service vehicles and equipment, including tractors, lifts and backhoes, from the current location and eliminate dozens of daily deliveries and contractor vehicles that must travel in this heavily student pedestrian area. In addition, the replacement facility will allow for other facilities units, including Campus Planning and Capital Projects that are located around campus, to be co-located together, increasing efficiencies. Once University Facilities is moved, the existing shop and warehouse space can be demolished to provide for safer pedestrian access to this core area of campus and the site will be available for future academic or residential development as appropriate.

There are no alternatives at this time other than continuing to operating this critical University function in an area of high student population.

Description

This project is to improve the primary vehicular roadway accessing the University to reduce traffic in the pedestrian-focused campus core. The work will include widening a 1.2-mile portion of Perimeter Road from US 76 to Cherry Road, installing safety lighting, pedestrian and bike paths, and improved signals, and doing other associated work to allow for roadway expansion. Additional safety improvements along Walter T. Cox Boulevard, formerly SC 93, may also be included as planning proceeds. These include adding raised plazas and speed tables and improving pedestrian signals at intersections.

The University's Long-Range Framework Plan, completed in 2017, calls for a significant shift toward pedestrian mobility in the heart of campus to ensure safety. Walter T. Cox Boulevard has seen large increases in pedestrian crossings with the addition of private housing developments downtown and the opening of the University's Douthitt Hills residence halls, providing more than 1,600 beds north of Walter T. Cox Boulevard. When the new College of Business opens in 2020, pedestrian crossings will continue to increase, making it essential for safety that the University encourage vehicles to reroute away from the campus core by using Perimeter Road. While much of Perimeter Road is already four lanes, the 1.2-mile, two-lane section will likely deter additional use as congestion is becoming more frequent during peak times when drivers enter and exit parking areas and roads that intersect Perimeter Road. Studies done for the University in 2018 show that efforts to move vehicular traffic to Perimeter Road have been successful, showing a 33% increase on Perimeter Road and a corresponding decrease on Walter T. Cox Boulevard.

Description

This project is to renovate the approximately 13,165 square foot auditorium in the approximately 95,700 square foot, historic Tillman Hall. The renovated space will create a modern auditorium that will respect its historical significance and become a premier gathering space in the heart of campus. The work will include renovating and improving the Tillman Hall Auditorium to make it function as both a large scale, 700-seat classroom and an auditorium space. It will also include installing new restrooms in a portion of the existing main building, returning the stage to a more manageable scale, installing a new balcony, and opening up the space to natural light. The renovation will further address planned maintenance, including replacing fan coil units, upgrading some interior finishes, and upgrading the fire protection and electrical systems.

Tillman Hall has not been renovated since 1981. The auditorium is not suitable for classroom instruction or for hosting campus speakers for students, faculty and staff. The large stage for theatrical productions is no longer needed and reducing the stage will provide more prime seating opportunities. Further, the auditorium does not meet current ADA standards.

Description

This project is to make comprehensive improvements at Memorial Stadium. The project scope will include five primary areas of improvement including : 1) adding premium seating areas and club spaces; 2) improving ADA accessibility and additional accessible seating, 3) fan experience upgrades including a new videoboard; 4) parking lot enhancements and related site work; and 5) football locker room renovations.

Additional premium seating is needed to meet the significant demand for club and suite seating at the stadium and, as the primary revenue-generating facility for athletics, to meet the need for continued revenue generation and capital gifts for IPTAY. The west end zone area will be expanded with an additional 800-seat concourse-level club and a 240-seat field level club with amenities similar to the West Zone and Younts South Club. In addition, significant accessible and wheelchair plus companion seating in the west end will be included where proper sightlines and on-grade access exist.

Fan amenities for the stadium will be upgraded, including installing a larger main videoboard in the east end, a new audio/speaker system, and LED lighting. Included in the east end design will also be strategically added seats, including accessible and wheelchair plus companion seating, and pedestrian pathways in and around the Hill and Howard's Rock area. The additional seats will offset potential future seat reductions throughout the stadium. Renovations to existing parking lots will include general sitework, potential capacity expansion, reorientations and reconfigurations, and amenity layout improvements for better tailgating experiences for IPTAY donors.

Finally, the locker room will be expanded from 5,500 to 14,000 square feet, including a video-review space within the locker room and the relocation of equipment and sports medicine functions to provide efficient adjacencies.

Description

This project is to expand and upgrade the three existing district chilled water facilities to serve the Clemson campus for current and future growth. The work will include expanding the existing chilled water plants with underground utility distribution piping upgrades, replacing more than 5,400 refrigeration tons of aging centrifugal chiller capacity that will be phased out in the campus Central Energy Facility, and adding 3,600 refrigeration tons of capacity for future buildings and future chiller plant building space and thermal energy storage for cost effective operations and anticipated campus building growth. Portions of the project will involve major thermal distribution piping upgrades for heating and cooling, high efficiency plant pumping and the potential use of high efficiency ground source geothermal heat pump systems.

New campus buildings being planned will exceed available cooling system production and distribution capabilities by 2025 and the aging central energy facility will be phased out over the next ten years. For energy efficient district cooling production to keep pace, the proposed expansions and upgrades to the district chilled water plants serving main campus academic, athletic, housing and other facilities are required to serve future campus growth and chiller plant equipment replacement needs for the next 25 years.

The implementation of a district energy scheme to serve the campus provides the best overall life-cycle benefit to the University and added flexibility in expanding the chilled water system to serve new campus facilities.

Description

This project is to demolish the approximately 256,500 square foot Johnstone Hall and Union Building Complex.

Johnstone Hall was built in the 1950's as temporary housing and is well past its useful life. The Union Building was constructed in 1974 and is in poor condition. Johnstone has been vacated, but is in the center of campus and requires expensive maintenance to ensure the safety of students, faculty and staff living and working in close proximity to it. Both buildings are inefficient, unsuitable for continued use and located in the center of campus, adjacent to Tillman Hall and the recently constructed Core Campus residence halls. The design process will determine what will initially replace these buildings on the site, however, it is expected that the buildings will be replaced with green space for student activities.

Description

This project is to construct an Advanced Materials Science Complex. The Advanced Materials Science Complex will provide a state-of-the-art, approximately 186,000 square foot interdisciplinary research laboratory and teaching facility for the Chemistry, Materials Science and Engineering, and Chemical and Biomolecular Engineering programs and related programs. This facility is essential to support the significant research and enrollment growth in these disciplines and to maintain Clemson's contributions to the State as a top-tier research and top-25 public university. Research expenditures in these fields are expected to reach approximately \$17 million annually by 2026, which is critical to supporting the \$100 million annual research target in the University's strategic plan. Further, enrollment in these high demand science and engineering disciplines is projected to grow by 25-30% by 2026. The current lack of chemistry facilities and laboratory space on campus will limit the University's ability to serve more students in these programs, making this facility critical to serving the State's growing educational and workforce needs.

The Advanced Materials Science Complex will include a variety of classrooms, wet and dry laboratories, faculty and administrative offices, lecture halls, seminar rooms and shared spaces that will encourage greater collaboration among students, faculty, staff and industry partners in the science and engineering disciplines. The facility will support almost 250 research faculty and personnel, as well as contain undergraduate labs that will accommodate more than 12,000 students a week. In addition to replacing buildings built between the 1930's and 1980's that no longer meet the instructional and research needs of a top-tier research and top-25 public university, this facility will allow for the systematic renovation of several antiquated facilities that are very costly to maintain as laboratory facilities.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Clemson University

Description

This project is to renovate the 92,000 square foot Martin Hall for the School of Mathematical and Statistical Sciences. Since the last CPIP submission, the University has continued evaluating the best scope for renovation of this facility. Martin Hall is located in the core of campus and is one of the highest credit-hour buildings on campus. Through a feasibility study, the University has determined that a more substantial renovation than originally envisioned would represent the best return on investment. The original scope of work addressed end-of-life systems needs. However, the renovations now will also enhance the building's functionality and enable better programming, maximizing the existing location and scale.

The work will include enclosing staircases and elevators between building sections which are currently exposed and creating collaborative spaces in those enclosed areas. Additional improvements will include constructing an open stair on the lower level to aid in site circulation and a one-story addition for collaborative space and team rooms on the amphitheater side of the building. It will also include renovating existing spaces to create additional modern classrooms and multi-use/flexible classrooms, reconfiguring faculty and graduate offices, and creating a first-floor front door and Administration Suite for the facility.

Built in 1962, the building has been well maintained but has not had a significant renovation since construction. Martin Hall consists of three buildings connected by exterior stairs that are covered but exposed to the elements, creating slippery and dangerous conditions for students and faculty moving between buildings during rain. In addition, the stairs are compact and become congested when students are going to and from class, and there are very few gathering spaces for students and faculty. The collaborative spaces, connectors and addition will enhance safety, significantly improve the movement of students within and between buildings, and provide breakout areas and study rooms. The interior renovations will provide much needed modern and updated classrooms.

Clemson has requested state appropriated funds for this project in the amount of \$18 million in its last three budget requests and anticipates requesting funds for the project again for FY 20-21. This project is being included in Year 3 as the University continues to refine the renovation scope for Martin Hall.

Description

This project is to renovate the 72,000 square foot Long Hall, an academic building located in Clemson's Historic District. Long Hall was constructed in 1937 as an agricultural studies building and houses offices, conference rooms and labs. The work will include renovating interior spaces, repairing the building envelope, installing a new fire sprinkler system, replacing the plumbing, HVAC, electrical and roofing systems, and abating hazardous materials.

Long Hall is more than 80 years old and has not had a significant renovation in many years. While maintenance work is performed annually on the building which is structurally sound, the building systems are old, not energy efficient and do not meet current safety standards. The interior spaces are not conducive to modern teaching methods and need to be updated. The clay tile roof is original to the building and is in poor condition. The proposed renovations will bring the facility up to modern teaching and building code standards.

Clemson requested state appropriated funds for this project in the amount of \$14 million in its last three budget requests and anticipates requesting funds for the project again for FY 20-21.

Description

This project is to construct approximately 151,000 square feet of apartment style housing at the Lightsey Bridge community and renovate the approximately 7,200 square foot Lightsey Bridge Commons facility. The new construction will add approximately 430 beds in apartment-style housing. The four-bedroom apartments will each include a living/dining room, kitchen, in-unit laundry and bathrooms. The work at the Commons facility will include renovating interior spaces and the entry lobby, adding new meeting/advising/classroom spaces, and updating the kitchen and offices. Site work, roadways and parking improvements will also be made to improve safety, ADA compliance and vehicular circulation.

The University needs to expand housing to replace the outdated and aging Thornhill Village apartments constructed in 1959 and to support anticipated enrollment growth. Additionally, the beds created by this expansion will provide swing space for the University's anticipated renovation of the Bryan Mall residence halls. The University's housing system has averaged 98.3% occupancy over the past ten years and providing housing options and capacity remains important to attracting top students. The new facilities will provide a home and sense of community for undergraduate students, while accommodating current and future growth. The Commons facility was constructed in 1991 and shows significant wear and tear due to constant use by students.

As with all projects, the University will continue to evaluate alternative scopes, however, the proposed plan was determined to be the best option based on available land, current needs, and anticipated demands.

Description

This project is to add approximately 5,000 square feet to the Reeves Football Operations Complex. The addition will include programmed space for football applied science staff and media production studios and will include two floors located on the north facade of the building, serving as a key connection enhancement to the adjacent weight room and indoor practice facility.

The Clemson Applied Science Lab is a quantitative analysis lab housing technology used to inform athletic development plans for student athletes in an effort to reduce injury risk and improve performance. Services made available by this space will include force production analysis, motion capture and movement efficiency evaluations, visual and cognitive performance assessments, gait analysis, load management, and body composition examination. The current quantitative analysis lab sits in a location that is insufficient in size and proximity to student athletes. The proposed project will move the lab adjacent to the weight room, which will improve data collection efficiency and will reduce time constraints on student athletes.

The addition of a production studio will be utilized for photo and video shoots operated primarily by internal creative services and publicity departments, as well as for external media partners (ESPN, ACC Network). This studio will serve as a flexible, multi-purpose space to set up media shoots for current and potential student athletes, complete with different backdrops, lighting and audio capacities. It will also feature workspaces for national media and broadcasters, including helping to fulfill interview shoot requests for the soon-to-launch ACC Network. Current spaces do not provide square footage, ceiling height and proximity to properly accommodate the photo/video shoots necessary for content production.

Description

This project is to construct an approximately 40,000 square foot covered, not enclosed combined practice facility for the men's baseball and the University's newly announced women's softball programs.

Currently, there is no facility that provides the ability for these teams to practice during inclement weather. A combined practice facility for both teams will provide for practice during inclement weather while leveraging efficiencies from the adjacent co-location of the baseball and softball facilities.

Additionally, other varsity sport programs, including men's and women's soccer, will have the opportunity to utilize the facility as available. Programming and design will be multifunctional to accommodate the desired comprehensive nature of the facility.

Description

This project is to renovate the 19,600 square foot McFadden Building that currently houses Athletic Department administration offices, coaches' offices and meeting rooms. The work will include updating and redesigning the entry lobby, renovating the building's interior, and making exterior enhancements to update the building.

The McFadden Building serves as the "front porch" for the athletic department. With the recent completion of other athletics projects, coaches housed in McFadden will be relocated to the Jervy Building. Once McFadden is renovated, the athletics department will be able to house all athletic administration under one roof. The interior design will also provide a more collaborative working environment for the Marketing and Communications departments to reflect their changing work environments.

Description

This project is to renovate the approximately 420,000 square feet in the Bryan Mall housing facilities. Bryan Mall consists of three high-rise buildings and three low-rise buildings that house 1,900 undergraduate students. The buildings no longer meet the preferences of students in key areas of bathroom privacy and common space and many building systems are past their useful lives. The University is currently evaluating the renovation needs and potential scopes to determine the most efficient and best long-term investment to extend the useful life of these facilities. The work will include repairing the building envelopes, improving accessibility, installing new fire sprinkler systems, replacing the plumbing, HVAC, electrical and roofing systems, and abating hazardous materials. Additionally, the project may include renovating interior spaces, renovating bathroom and common spaces to accommodate modern student preferences, and improving the existing courtyard, currently used for parking, to contribute to the student experience.

The buildings were built between 1963 and 1972 and have had minimal renovations since construction. While maintenance is performed annually on the buildings, the building systems are old, not energy efficient, and not compliant with current code requirements. The interior spaces are not conducive to modern student needs and require updating. The roofs are in poor condition and need replacing. The proposed renovations will bring the facilities up to current standards.

Description

The new enrichment center is planned to be a 40,500 plus square foot building which will contain computer labs, seminar offices, and study lounges that will be built with an eye toward creating an environment that will encourage various experiential learning endeavors. A catwalk connecting the academic enrichment building to the existing Kimbel Library and Bryan Information Commons will add a cohesiveness between this complex and the existing campus. In addition to the academic space, a 17,000 plus square foot lecture hall with seating capacity for approximately 1,000 people is planned. This new space will allow for a greater quantity and larger events to be scheduled on campus as well as free up the existing Wheelwright Auditorium to be dedicated to the Theatre Department. Alternatives to this project would be to continue in our Wheelwright Auditorium space and miss out on opportunities for learning. This alternative limits our ability to provide the best experience we are able for students and the campus community.

Description

This project consists of the complete renovation of the existing facility's HVAC system to include demolition of the entire existing system and installation of a new chilled and hot water system to include air handlers, VAV boxes, boiler, piping, valves, electrical and controls. The removal of the existing HVAC system will require the demolition of the existing ceiling and installation of a new suspended ceiling and associated lighting. In addition, the existing electrical system will need to be upgraded to accommodate the new HVAC and lighting systems. The current system is 42 years old and will not maintain proper humidity levels for the library. There are no other practical solutions.

Description

The Eaglin Residence Hall houses 394 students. This building is in need of a new HVAC system, electrical upgrades, updated technology, fire and sprinkler systems, mass notification systems and interior refurbishment to enhance the living environment for the students. Eaglin Hall was built in the year 2000. Due to normal wear and tear, the age of the building dictates that the indicated upgrades are needed to ensure that the University maintains a safe and healthy living environment for our students and staff. Alternatives considered are to defer the maintenance and risk more costly expenditures in the future, or to build new residence halls, which may cost an estimated \$25 million plus.

Description

The current Lib Jackson Student Center was constructed in 1978 when enrollment was 1,760 students. In the Fall 2016 semester, enrollment was 10,479 students. This increase in population has created a major deficiency in student life space. An additional 100,000 square feet is suggested by national standards to support our projected student headcount. One step towards this goal was realized when the addition of an annex providing approximately 40,000 square feet was opened on the campus in December 2014, making the center a total of 71,000 square feet. Plans are to construct a second annex to be approximately 55,000 square feet which will bring the University close to the national standard for area dedicated to student life activities. Also included in the annex will be an auditorium with seating capacity for approximately 1,000 people, allowing for lectures and meeting space for larger events such as new student orientations. This project coincides with our goal to build a campus community which will foster informal learning and promote retention of students by the University. An alternative would be to forego this addition and allocate penny sales tax money, levied for the purpose of campus growth, to another campus project.

Description

This building is planned to be built on the core campus to be approximately 54,000 square feet. This will bring an increased level of classroom and office space for the growing campus community. The need for additional space is made evident by the classroom usage statistic, reported by CHE, which shows Coastal Carolina University having 63 square feet per FTE student dedicated to academic support, compared to an average of 107 square feet per FTE student reported by other comprehensive universities in South Carolina. This space will provide a multidisciplinary focus with humanities being the featured discipline. Additionally, given our expanded honors population of over 700 students, this facility will house the Honors College, providing students a smaller class size experience and, thus, higher levels of interaction with faculty. An alternative to be considered is to use the penny sales tax fund, levied for the purpose of campus growth, for another project.

Description

The PGM Facility is intended to house the PGA Golf Management Program at CCU. A 23,010 square foot building is planned to replace the current structure which was built in 1969. The new facility would include classrooms, offices, an instructional lab, a student lounge, a pro shop, as well as a food service area. The PGA Golf Management Program at Coastal Carolina University prepares students for a successful career in the golf industry by combining academic studies and professional golf-training experiences. The program's curriculum has been carefully developed to offer students the opportunity to simultaneously complete the requirements for a Bachelor of Science in Business Administration, acquire valuable training experiences in the golf industry and complete the PGA of America's membership requirements. In fall 2018, there were 255 students enrolled in the PGA Golf Management Program.

Description

The HTC Center was built in 2012 and is used primarily as a Convocation Center and home of the Chanticleer Volleyball and Mens and Womens Basketball teams. It has been determined that there is a need for additional space to properly store staging, athletic equipment, and operational/production items and provide covered, climate controlled area for faculty and graduate line-ups during commencements, convocations and other events requiring such space. By building the attached space on the North side of the HTC Center, we could add up to 10,000 square feet for practice facilities. This would allow an additional 5,000 square foot of storage for future acquisitions of event equipment such as outdoor staging, folding chairs. The additional space would provide cost savings by eliminating the need to lease space off campus. During events such as Commencement, there would also be space to line up students that would give them easy access to the gymnasium without having to wind them through narrow, stuffy hallways. An alternative to adding an extension would be to continue using current space, which has limited space available for extra needs.

Description

This building is planned to be approximately 54,000 square feet and will provide additional classroom and office space for our growing campus. As new programs are added, demand for classrooms and faculty offices increases. Coastal Carolina University currently has the lowest amount of academic space per FTE student of any other SC comprehensive teaching institution. This additional space would bring us more in line with the state average.

Description

This building is planned to be approximately 14,000 square feet and will serve as the Student Health and Wellness Center. The Center will be constructed in a central, convenient location for students and will provide quality primary care and prevention and education services with an emphasis on teaching personal responsibility for health and wellness. The facility that currently serves as the Student Health Center is adjacent to the Department of Public Safety and can subsequently be upfitted to provide Public Safety additional, needed space.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) McAlister Residence Hall is a 152,142gsf six-level 535-bed facility built in 2002. No significant renovations since construction have occurred. This project will address moisture intrusion/damage & IAQ issues, replacing roof, windows, plumbing fixtures, railings, lighting, elevator controls, damaged sheetrock/studs, FFE, finishes & 75% of exterior stucco. Structural repairs will be made to areas damaged by moisture intrusion. 130 HVAC units will be replaced by a centralized system to increase efficiency & alleviate the "heat tunnel" effect from the current exhaust design. Ductwork, millwork & doors will be cleaned, repaired &/or replaced as needed. Telecommunications will be upgraded. A previous project similar in scope was withdrawn after destructive testing revealed moisture intrusion/damage was far worse than originally anticipated. The College will seek Phase I approval to begin the design process in late 2019 to early 2020 & hopes to obtain Phase II approval for construction to commence in May 2021 & conclude in July 2022.

(Justification) McAlister Hall was in the Tier Four housing fee structure until the 2018-19 academic year. It was downgraded to Tier Three for 2019-20 due to deteriorated building conditions, causing a revenue loss of about \$1M. The College has received many complaints about IAQ issues & continues to encounter moisture intrusion issues.

(Alternatives Considered) Demolition & replacement on the same parcel was considered, but deemed too costly. There appears to be no other alternative than to move students to swing space, close the building for one year & implement a proper renovation.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Simons Center for the Arts is an 80,587gsf four-level facility built in 1979. No significant renovations since construction have occurred. 66,025gsf of existing space will be renovated. 14,562gsf of existing space will be selectively demolished and rebuilt in the existing footprint. 10,113gsf of additional space will be constructed in/over an existing courtyard. Newly renovated/constructed gsf will be 90,700. The project will provide for the renovation and expansion requiring infrastructure renovation/replacement, upgrades to meet current building/accessibility codes and space utilization alterations to meet current and future program needs. Specifically, the project will provide a small central energy plant to power this building and two adjacent structures. The Simons Center building will house a state-of-the-art black box theatre; expanded storage and studio space for the costume shop; renovated support spaces for performance areas; renovated Emmett Robinson Theatre; upgrades to printmaking, sculpture, and painting studios; new computer and design labs; a radio and music production studio; and faculty/staff offices.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 33 out of a possible 100 points. All infrastructural systems have exhausted their life cycles and their hub locations are susceptible to flooding. There are immediate safety concerns, since the facility does not meet current accessibility, egress, safety or seismic codes. The main lobby violates occupant codes for assembly space outside of the three performance venues. The satellite central energy facility will relieve overcapacity from the main energy plant and provide service to the Simons Center as well as two adjoining buildings. The self-contained facility will negate the need for under-street piping and subsequent repairs that usually involve public street closures and pavement resurfacing.

(Alternatives Considered) Demolition and replacement would be more costly than renovation. Demolition would most likely be denied by the City of Charleston since the building is considered to be a significant representative of the architectural period in which constructed. Comparable space does not exist in the vicinity to accommodate the required atypical programmatic needs. (Examples include high ceilings for theatre set construction, reinforced foundations to accommodate heavy sculpture projects and acoustically protected spaces for music instruction and practice.)

Phase I approval was granted June 27, 2012. As of June 13, 2019, Phase II has been approved by CHE, but still requires approval from JBRC and SFAA at their upcoming scheduled meetings.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) Wentworth Parking Garage is a 210,600gsf five-level 515-space facility built in 1984. The College performed the most recent major repairs in 2005. This project will address structural deficiencies, elevator modernization, restriping & access control system/equipment replacement. During the design process, we will explore opportunities to add additional parking levels. If feasible, the scope of the project will be expanded to include the addition. If additional levels are not feasible, the College will seek Phase I approval to begin the design process in fall 2019, followed by Phase II approval for construction to commence in May 2020 & conclude in July 2020. If additional levels are feasible, the College will still seek Phase I approval in fall 2019, but adjust the Phase II approval & construction schedule accordingly.

(Justification) A structural assessment of the garage was completed May 21, 2018 that indicated the garage is in poor condition & major repairs are required. The structure was deemed suitable to remain operational while the deficiencies are addressed, provided repairs commence in the 2019-20 fiscal year. The exterior stairwell's foundation appears to have settled, causing the stairwell structure to pull away from the garage structure. A corbel supporting a breezeway beam has cracked in half. The breezeway slabs have separated from the garage by 1-2". Rusting exposed steel reinforcing in concrete beams, columns, slabs & stairwells is leading to cracking, spalling & water intrusion. Masonry mortar joints are deteriorating. A large crack in the masonry elevator shaft indicates several blocks on the corner of the shaft separating from the shaft. Vehicular barriers are non-existent. Metal guardrails & handrails between levels are inadequate, ADA noncompliant & rusting. The machine room roof & façade of the elevator are severely damaged with part of the metal siding missing. The access control equipment is approximately 20 years old, experiencing routine failures & beyond its useful life. The technology used to operate the equipment is outdated & does not allow for automation.

(Alternatives Considered) Parking is at a premium on campus & throughout the City. The closure of this garage due to structural failure would lead to a significant financial loss of parking revenue & a severe shortage of parking in the area.

Description

(Description) The Multicultural Center (Richard Brenan House) at 207 Calhoun Street is a four-level, 8,287gsf prominent historic building at the western gateway of campus. It was constructed in 1817 & last renovated in 2005. The last renovation consisted primarily of interior upgrades & reconfigurations. This project will address envelope issues (roof & stucco repairs); exterior repairs/restorations to wood columns, windows, railing & trim; structural repairs to the two-level piazza; addition of an ADA compliant entry/exit ramp, infrastructure modernization, landscaping, parking area hardscaping & a refresh of the interiors.

(Justification) The Multicultural Center has significant structural issues on the piazzas, decayed structural/aesthetic wood elements stucco cracks, minor roof leaks & awkward ADA access. The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 33 out of a possible 100 points. Certain portions of the entry porch are closed for structural issues. If left unchecked, it could be a threat to the safety of the College community & the public.

(Alternatives Considered) As a historically protected building, demolition is not an option. No alternatives to renovation exist. It is most prudent to address building problems as soon as possible before further decay occurs.

College of Charleston

Description

(Description) The Silcox Physical Education and Health Center is a 48,904gsf four-level facility built in 1939 as a WPA project. No significant exterior renovations have occurred since construction. The last interior renovation was in 1995. The building materials reflect the time of construction & labor intensive installations - stucco over masonry, wood sash windows with divided glass, metal roof trusses with wood decking, some exterior ironwork & a slate roof. The building houses a mix of classrooms, offices, indoor sports & labs. This project entails an exterior renovation to correct envelope deficiencies & an interior renovation of the 1st floor (18,059gsf) to upgrade restrooms to ADA compliance, replace classroom technology & furnishings, improve emergency egress & better utilize existing space.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 28 out of a possible 100 points. The building is approaching a state of disrepair. Wood windows were previously repaired but are reaching the end of their life cycle. Stucco is failing at rusting lintels, displays stains & cracks. The roof decking shows deflection & signs of water infiltration. The moisture intrusion is creating indoor air quality issues, requiring the College to find alternate spaces for some classes & student activities.

(Alternatives Considered) Demolition & replacement of this facility is not an option, since this is one of a very small quantity of WPA projects in the City. Alternative specialized recreation space is not available near campus.

Description

(Description) The Barnard Elliott House at 58 George Street is a four-level, 6,327gsf prominent historic building in the heart of campus. It was constructed in 1803 & last renovated in 1987. It was taken offline in 2015 due to structural instability & remains vacant. This project will include full interior/exterior renovations, structural repairs, infrastructure modernization & demolition/reconstruction of a small addition to include accessible restrooms, elevator & infrastructural system hubs. The Edward McCrady House at 44 St. Philip Street is a two-level 1,790gsf historic building adjacent to 58 George. Constructed in 1770, it is one of the oldest buildings on the College campus. Mr. McCrady owned McCrady's Tavern, where George Washington was entertained in 1791. It was last renovated in 1987 & needs a complete renovation to address structural, envelope, MEP, accessibility & safety issues. The building will be an "annex" to 58 George to eliminate the need for a larger 58G building addition. A study will be conducted to determine the feasibility of connecting the two buildings to provide ADA access to both structures.

(Justification) 58 George has significant structural issues. The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 17 out of a possible 100 points. If left unchecked, it could be a threat to the safety of the College community & the public. Until repair needs are addressed, the building cannot be safely occupied. 44 St. Philip has similar issues, but not as severe. The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 33 out of a possible 100 points. It is prudent to renovate both structures at once to achieve economies of scale & minimize new construction at 58 George.

(Alternatives Considered) As historically protected buildings, demolition is not an option. No alternatives to renovation exist.

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Stern Student Center is a 66,794gsf four-level mixed-use facility built in 1975. The last major renovation was in 2005. Exterior work will include envelope repairs to address water intrusion. Interior work will reconfigure the two-level pool area to insert an additional floor for student recreational space, refresh circulation, study & conference areas/rooms for student organizations & reconfigure student support offices for better utilization. The project will also renovate the 100-seat food court & courtyard. A catering kitchen will be added adjacent to the food court kitchens to support functions campus wide from a central preparation point, share the existing loading dock & delivery vehicle parking spaces & perhaps share kitchen equipment. A study will be conducted to investigate the feasibility of a building addition to house more student support/service functions, centralize departments & free up other campus space. The study will also explore connecting the building addition to an adjacent historic structure at 67 George Street (CPIP 2018 Y2P3). Integrating this building into the scope allows for sharing of infrastructure & ADA access.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 67 out of a possible 100 points. The conversion of the pool wing will allow the College to repurpose approximately 19,000asf of vacant space in the heart of campus for a better & higher use. (The College terminated its collegiate swim teams due to operational costs for the program & the facility.) The pool is in poor condition, requiring significant capital investment to correct maintenance issues & does not meet current NCAA size/depth requirements. The renovated pool wing should allow the College to bring the student fitness center back to the Stern Center. The College is currently leasing private space at \$500K per year for its student fitness center. This move will not only save money, but also bring traffic and activity to the student union. The Food Court contains four retail food service concepts that must comply with national food service brand requirements. The College's catering operation must relocate since it is currently housed on the ground floor of Craig Residence Hall, a building scheduled for renovation/replacement.

(Alternatives Considered) The 2012 Campus Master Plan suggested creating a satellite student union on the north side of campus. Our students & Student Affairs staff perceived this as a disjointed approach. The creation of this satellite facility in an existing building would uproot several academic departments & was proven prohibitively expensive.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) Addlestone Library is a 151,306gsf three-level facility built in 2004. The last significant renovation was in 2011, a \$5M project to replace static shelving with compact shelving on the second & third floor to expand student study space, add power to all study areas, & accommodate the collections of the South Carolina Historical Society. The scope of that project was limited to the interiors of the third floor only. The exterior & remaining floors were unaffected. Exterior work for this project will include envelope repairs to address water intrusion from the roof, windows & exterior wall failures. Interior work will modernize two computer labs; centralize circulation & reference desk functions to release current staff space for student use; divide an existing office to create a student-use seminar room; construct a collaborative learning zone, expand access to power & data for students; add student seating & study space; & relocate the John M. Rivers Communications Museum (temporarily closed) from its former location at 58 George Street.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 78 out of a possible 100 points. Some moisture intrusion has damaged furniture & collections. Addressing these issues in an early stage will prevent further deterioration & property damage. The equipment & purpose of the computer labs have become functionally obsolete. One lab will be converted to a Digital Media Lab for movie/video editing & post-production. The other lab will be equipped with flexible furnishings to function as a classroom as well as a lab. The centralization of circulation & reference desks will create space for the Communications Museum, allow for increased staffing efficiency & improve the customer experience by creating one consolidated customer service desk. The museum will relocate an existing collection & highlight technological innovations that transformed electronic communications leading up to & throughout the 20th century. Drawing from the evolving mission of College of Charleston Libraries to promote digital media & learning, the museum will provide powerful insights into technologies of the past that transformed how we communicate today. We anticipate the relocation of the museum & the partnership with CofC Libraries will substantially increase attendance & awareness of this interesting historic collection.

(Alternatives Considered) There are no alternatives to addressing the envelope repairs. Moisture intrusion & property damage will only increase. The College considered several sites to relocate the John M. Rivers Communication Museum, but no alternatives could display the collection as prominently, nor duplicate the synergy by collaborating with CofC Libraries. The ability to view the vintage collection & learn about modern digital media in a participatory setting is not replicable elsewhere on campus.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) Berry Residence Hall is an 183,514 six-level 630-bed residence hall constructed in 1989. The last significant renovation was in 2003. This project will address MEP issues, roof repairs, elevator upgrades & a complete interior refresh consisting of new paint, flooring, lighting, millwork, plumbing fixtures, furniture & signage. A feasibility study will investigate expansion of Honors College spaces to create a true living/learning environment & possibly add usable space by enclosing the existing entrance breezeway. The College will seek Phase I approval to begin the design process in early 2020, followed by Phase II approval for construction to commence in May 2023 & conclude in July 2024.

(Justification) Prospective students & parents consider campus living environments to be among the top criteria in choosing a college or university. With an increasing supply of private student housing coming online in Charleston, it is important to have clean, up-to-date, well-maintained & reasonably priced housing facilities that can uniquely offer a sense of campus community. Berry Hall is in the Tier Two housing fee structure. If the building condition continues to decline, the College may need to downgrade the building to a Tier One fee structure. This could cause a revenue loss of about \$283K per year. The College has received complaints about mechanical, elevator & moisture intrusion issues that will only increase if left unattended.

(Alternatives Considered) Considering there are no alternate housing locations for this quantity of students, the only alternative would be to repair issues slowly while residents are in place. This will cause serious infrastructure disruptions, noise & construction dust, all of which would be detrimental to the student living & studying experience. The result would be increased cost, longer duration & damaged student/parent/College relations.

			4,000,000

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

(Description) The College's five-year plan factors in potential land acquisitions in the event that an opportunity to expand the College's footprint should arise. The 2012 Master Plan found that utilization of existing facilities exceeds standards, yet the College faces a significant, growing space deficit. The Plan identified several land parcels located on the fringes of the existing campus that would enable the development of needed facilities as well as enhance the vibrancy of prominent city streets. Please see the attached Master Land Acquisition Plan for more detail.

(Justification) The 2012 Master Plan identified a growing space deficit at the College. Given the College's unique location within the city center and a historic zone, growth opportunities within the existing footprint are limited.

(Alternatives Considered) No alternatives exist other than continually improving the utilization of existing space. However, that is not expected to fulfill long-term space needs.

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) College Lodge is a 71,375gsf six-level 200-bed residence hall constructed as the Downtowner Motor Inn in 1963. The College purchased the building in 1975. The last significant renovation was in 2004. The upper five floors are double-capacity student rooms. The ground floor has community space & contains a ground floor retail market operated by Dining Services. This project will start with a feasibility study to determine if the building should be renovated, replaced or a combination of both. This decision will be mostly driven by the City of Charleston's permission to demolish the existing structure. If the College is required to retain & renovate the building, it will require all new MEP infrastructure, a new code-compliant curtain wall system, structural repairs to the cantilevered balconies, envelope repairs/resealing, new fire sprinkler/alarm system, new code-compliant stairwells/elevators, ADA upgrades, seismic retrofits, complete bathroom renovations, new finishes & new furniture. The structurally deficient two-level parking deck will require major structural work. The College wishes to convert this underutilized space to revenue producing student rooms. A full-service dining venue will be added to the ground floor. We anticipate a lengthy design & approval process with the City, so the College will seek Phase I approval in FY2020-21, Phase II approval in FY2022-23 & construction in FY2023-25.

(Justification) An independent consultant study from 2013 indicates MEP systems are in poor condition. We experience continued failures that negatively affect the student experience. There are structural deficiencies & building envelope issues that are allowing water intrusion. The single-paned original curtain wall system of floor-to-ceiling windows creates significant solar heat gain, causing cooling systems to work overtime, create condensation/moisture issues & fail prematurely. The lack of conditioned make-up air & ineffective exhaust systems exacerbate the issue. The building has an outdated fire alarm system & lacks a fire sprinkler system. The building envelope & exterior facade show signs of age & leaks.

(Alternatives Considered) Considering there are no alternate on-campus housing locations for this quantity of students, the only option would be to close the building & lease space off-campus. The building has reached the end of its life cycle in current form. The College solicited offers to lease off-campus housing for overflow residents in fall 2018. The best value was \$7,500 per bed, per academic year. The cost of placing 200 College Lodge residents in off-campus housing would be about \$1.5M annually.

Description

(Description) 22 Glebe Street is a 4,435gsf two-level building constructed in 1905. The last significant renovation was in 1991. 26 Glebe Street is a 3,910gsf three-level building of similar style built in 1887. The last significant renovation was in 1987. Both buildings are prominently in the heart of campus & require historic restoration. The project will include complete renovation to address structural, envelope, MEP, accessibility, safety & wood/plaster/stucco issues. Both buildings were former private residences with odd additions & disjointed floorplans. Interior layouts will be addressed to maximize space utilization. These buildings are located next to one another, so the College hopes to gain economies of scale by using one A/E & one contractor to design/construct both renovations.

(Justification) The most recent CHE Building Condition Survey (2017) rated 22 Glebe Street with a CHEMIS Condition Code of 41 out of a possible 100 points. 26 Glebe received a CCC of 40. Both buildings have moderate structural issues on the two-level piazzas, decayed structural/aesthetic wood elements (columns, windows, railings & trim), problematic lap siding (22 Glebe), stucco cracks (26 Glebe), minor roof leaks & no ADA access. If left unchecked, deterioration could worsen, becoming a safety threat the College community & public.

(Alternatives Considered) As historically protected buildings, demolition is not an option. No alternatives to renovation exist. It is most prudent to address building problems as soon as possible before further decay occurs.

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The BellSouth Building is a 104,472gsf five-level mixed-use building constructed in 1938 as a major telecommunications hub for the City of Charleston. The structure was originally three levels. Two levels were added in the late 1950's. The College purchased the building in 1995. The last significant renovation was in 2013, but pertained only to the construction of the Center for Social Science Research on a portion of the second floor. All other building alterations consisted of piecemeal adaptive reuse of existing space or smaller space reallocations. The building is the College's technology backbone, containing the main networking & data storage centers; all central software for enterprise resource planning & integrated work management systems & any other software to conduct daily business. The facility has approximately 120 faculty/staff offices (Information Technology, Psychology & languages), 20 labs & 22 classroom serving about 3,300 students per weekday. All infrastructure systems except phone/data delivery believed to be original or from the 1950's. Although a complete renovation is needed, the scope of this project is to replace all mechanical equipment & some associated HVAC delivery systems; upgrade electrical systems; upgrade elevators; replace lighting with energy-efficient LED fixtures; replace interior finishes (paint, floorcoverings, ceiling tile); upgrade select classroom audiovisual systems & replace select classroom furnishings. Asbestos abatement is required on ductwork insulation & under existing floorcoverings.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 45 out of a possible 100 points. The BellSouth Building has HVAC equipment that is almost 60 years old. Repairs & parts sourcing is becoming increasingly difficult. Although the technology server room has separate supplemental cooling, a May 2019 mechanical equipment failure during a heat wave caused an abrupt network systems crash campus wide. The College lost several hours of productivity & technology was unavailable for classroom instruction. The BellSouth Building has many deferred maintenance issues, but reliable HVAC & electrical systems are of the utmost priorities. New interior finishes & select classroom upgrades will keep the building looking presentable until the financial resources are available to undertake a full renovation.

(Alternatives Considered) There are no alternatives. The College cannot operate without its technology backbone. There is no alternative space on campus accommodate 3,300 students per weekday.

College of Charleston

Description

(Description) Maybank Hall is a 47,905gsf three-level academic building constructed in 1973 in the heart of campus. The last major renovation was in 2007, but consisted only of electrical upgrades, ceiling replacements, door replacements, fire alarm upgrades & limited HVAC work. The facility contains 34 faculty/staff offices & 37 classrooms serving about 5,500 students per weekday. This project entails an exterior renovation to correct envelope deficiencies & an interior renovation to replace MEP systems, add fire sprinklers, upgrade elevators, upgrade restrooms for ADA compliance, refresh/replace interior finishes & upgrade/replace classroom technology & furnishings.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 64 out of a possible 100 points. Roof, parapet & window leaks are disrupting classroom instruction. Stucco cracks are adding to moisture infiltration & compromising indoor air quality issues. The building is heavily used to teach core curriculum classes & host student/parent orientation activities. It is a "first impression" building when entering our campus. The College prefers to address the deferred maintenance issues before they worsen.

(Alternatives Considered) Demolition & replacement of this facility would be premature & financially imprudent. Allowing the moisture issues to continue will further compromise indoor air quality & possibly lead to structural damage. There is no alternative space on campus to accommodate 5,500 students per weekday.

Description

(Description) 123 Bull Street is a 5,172gsf three-level building adjacent to the College's Avery Research Center for African American History & Culture. It was constructed in 1858 & last renovated in 1984. The building was taken offline in 2013 due to ongoing building issues & remains vacant. Once renovated, it will serve as an extension of the Avery Research Center. This project will include full interior/exterior renovations, structural repairs, envelope repairs, first floor ADA accessibility & a full MEP/fire safety infrastructure modernization. Structural repairs include replacement of damaged wood framing & sill plates, replacement of brick foundation piers & wood repairs/replacement on the two-level piazza. Envelope repair addresses moisture intrusion, roof replacement, window replacement/repair & exterior stucco repair.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 0 out of a possible 100 points. If left unchecked, it could be a threat to the safety of the College community & the public. Until repair needs are addressed, the building cannot be safely occupied.

(Alternatives Considered) As a historically protected building, demolition is not an option. No alternatives to renovation exist. It is most prudent to address building problems as soon as possible before further decay or demolition-by-neglect occurs.

College of Charleston

Description

(Description) Craig Hall is a 55,792gsf three-level mixed-use building constructed in 1961 as the College's first residence hall & student union. The third floor of the original building was added in 1970. A three-level west wing & cafeteria expansion were added in 1978. The cafeteria was again expanded in 1988 to add a central atrium dining room. The last significant renovation to the residence hall was in 2004. The cafeteria relocated to another site in 2007. The cafeteria kitchen was converted to a catering kitchen & the vacant space was significantly renovated in 2009 to house a consolidated Office of Admissions. Throughout all of these expansions & reconfigurations, building improvements focused on interiors. The building envelope has not received significant renovations since each portion was constructed. The ground floor currently houses the Office of Admissions, Dining Services, Catering Operations & mechanical equipment serving the entire facility. The second & third floors are student housing with approximately 140 beds. This project would provide for a replacement building containing a mix of administrative, academic, student housing & auxiliary functions, suitable in prominence for a site directly across from Randolph Hall, our flagship building in the heart of our campus. The replacement building would better utilize the site, taking advantage of the full height allowance & potentially gaining 20,000 additional gsf over the existing structure. The 2012 Campus Master Plan recommends converting the site to academic use to alleviate ongoing space deficits. A feasibility study will be conducted to determine the best mix of space allocation to the four aforementioned categories within the building. The College will seek Phase I approval to begin the design process in late 2020, followed by Phase II approval for construction to commence in May 2023 & conclude in July 2025.

(Justification) A MEP study indicated the building's systems are in poor condition & the facility is experiencing continued failures that have negatively affected the student experience. Numerous leaks from the residence hall plumbing infrastructure have flooded portions of the Office of Admissions, detracting from prospective students' first impression of the College. The series of added wings creates a labyrinth-like floorplan, incapable of alterations unless major structural changes are made. The residence hall portion lacks a fire sprinkler system, elevators & ADA access. The exterior facade has significant stucco cracks & rusting lintels, perhaps leading to a structural issue.

(Alternatives Considered) The only alternative would be to repair issues slowly while residents Admissions staff & Dining Services staff remain in place. The catering kitchen would require relocation to a leased facility off campus. DHEC regulations would likely prohibit construction activity around food preparation. Renovations in place would cause serious infrastructure disruptions, noise & construction dust, all of which would be detrimental to the student living & studying experience. The result would be increased cost, longer duration, damaged student/parent/College relations & constant repairs to a functionally & physically obsolete structure.

			(4,000)

Description

(Description) Kelly House Apartments is a 79,362gsf four-level 240-bed facility built in 1995. The College purchased the complex in 2002. An internal capital project to refresh interior finishes & renovate the central courtyard was completed in summer 2018. No other significant renovations have occurred since construction other than routine maintenance. This project entails an exterior renovation to correct envelope deficiencies (roof, flashing, windows & stucco) as well as a structural assessment of the three levels of steel-frame balconies & connecting staircases that surround the central courtyard. A study will be conducted to determine the feasibility of adding an elevator, currently nonexistent. The College will seek Phase I approval to begin the design process in mid-2021, followed by Phase II approval for construction to commence in May 2023 & conclude in July 2024.

(Justification) It is imperative to address the building envelope issues before they worsen. The steel frame, concrete slab balcony system & connecting steel staircases are the only means of accessing the apartments. They must be capable of supporting all residents simultaneously in an emergency evacuation. There are visible signs of moisture intrusion at steel-to-concrete joints causing spalling. Stairwell risers have rusted to the point of developing holes, compromising structural integrity. The moisture intrusion will lead to IAQ issues & the lack of elevator prohibits passage to upper floors by mobility-impaired residents, parents & visitors.

(Alternatives Considered) Considering there are no alternate housing locations for this quantity of students, the only alternative would be to repair issues slowly while residents are in place. This will cause serious disruptions, noise, construction dust & welding sparks, all of which would be detrimental to the student living & studying experience. The result would be increased cost, longer duration & damaged student/parent/College relations.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) Buist Rivers Residence Hall is a 30,364gsf four-level 108-bed traditional style residence hall constructed in 1967 as the College's first dedicated all-female residential facility. The ground floor consists of common spaces. The upper three floors are identical, each containing 18 double-capacity student rooms for freshmen, one community lounge & two community restrooms. The last significant renovation was in 2008, consisting of major envelope repairs (new roof & windows, resealed exterior stucco); select HVAC & community restroom upgrades & a new fire sprinkler & alarm system. This project will redesign the six community restrooms for increased privacy/security; renovate community lounge, laundry & kitchen spaces; replace the two-pipe (original to building) HVAC & domestic hot water systems; replace lighting with LED fixtures & provide an interior refresh consisting of painting, new flooring, furniture & signage. Building envelope maintenance will be addressed, but does not require wholesale replacements. An underutilized portico & courtyard will be revitalized to add outdoor study & activity space. The College will seek Phase I approval to begin the design process in mid-2021, followed by Phase II approval for construction to commence in May 2023 & conclude in July 2024.

(Justification) Students speak fondly of the sense of community developed in this traditional-style residence hall, but the most facility complaints arise from the community restrooms, domestic water & HVAC systems. The copper pipes for HVAC are over 50 years old & are corroding, creating leaks through rooms below. Despite a sound building envelope, the College has received many complaints about IAQ issues & continues to encounter moisture intrusion issues from within the structure.

(Alternatives Considered) The only alternative would be to repair issues slowly while residents are in place. The proposed mechanical & restroom work would require complete shutdowns of infrastructural systems, causing serious disruptions. Contractors could not perform work when residents are present due to privacy & security regulations. Associated noise, construction dust & aforementioned shutdowns would be detrimental to the student living & studying experience. The result would be increased cost, longer duration & damaged student/parent/College relations.

Utilities	200,000		
	20,000,000		

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

(Description) The College hopes to maximize use of a surface parking lot (College/State owned) by constructing a multi-level parking garage located behind a satellite College office building at 176 Lockwood Boulevard. The College commissioned a feasibility study in 2017 which showed the best option is a six-level, three-bay deck capable of accommodating 800 spaces. Further study will examine feasibility of developing a portion of the first floor as assignable office space. This property is located adjacent to the West Edge Development with excellent access to major roads serving peninsular Charleston. In addition, the parcel is located on an existing CARTA public bus route that would provide transportation to/from the heart of campus. The College has an established relationship with CARTA, providing shuttle service from main campus to the nearby Harbor Walk complex & express bus service from main campus to regional suburbs.

(Justification) The College leases spaces in the City of Charleston's Aquarium Garage to meet demand for faculty/staff/student parking. However, as that area has developed, the City greatly reduced the number of permits available to the College from 750 in 2007 to 200 permits for the 2018-2019 academic year. In addition, the cost of each permit has increased from \$375 per year to \$1,920. The College's available permit supply does not meet current demand & the cost of City-owned parking is unaffordable.

(Alternatives Considered) The College is open to soliciting a Request for Proposals that may introduce alternate site opportunities. However, we assume the expense would be greater since a land purchase would be necessary. The feasibility study showed no comparable available parcels within a reasonable distance of the College zoned for this type of construction. Appreciating land costs in the vicinity have proven to be cost prohibitive.

			4,000,000

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

(Description) The College's five-year plan factors in potential land acquisitions in the event that an opportunity to expand the College's footprint should arise. The 2012 Master Plan found that utilization of existing facilities exceeds standards, yet the College faces a significant, growing space deficit. The Plan identified several land parcels located on the fringes of the existing campus that would enable the development of needed facilities as well as enhance the vibrancy of prominent city streets. Please see the attached Master Land Acquisition Plan for more detail.

(Justification) The 2012 Master Plan identified a growing space deficit at the College. Given the College's unique location within the city center and a historic zone, growth opportunities within the existing footprint are limited.

(Alternatives Considered) No alternatives exist other than continually improving the utilization of existing space. However, that is not expected to fulfill long-term space needs.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Silcox Physical Education and Health Center is a 48,904gsf four-level facility built in 1939 as a WPA project. No significant exterior renovations have occurred since construction. The last interior renovation was in 1995. The building houses a mix of classrooms, offices, indoor sports & labs. This project entails an interior renovation of 2nd-4th floors (30,845gsf) to upgrade MEP systems, upgrade the elevator, upgrade restrooms to ADA compliance, replace classroom & office technology & furnishings, improve emergency egress & better utilize existing space. A study will be conducted to determine the feasibility of adding an elevator to the south side of the building (currently non-existent) & inserting a floor between the two-level former gymnasium, potentially adding 10,000asf without expanding the building footprint.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 28 out of a possible 100 points. The College is reluctant to invest significantly for interior upgrades until building envelope repairs are complete. Classroom technology is functionally obsolete & furnishings are at least 20 years old. Faculty offices on the southern end of the third floor are only accessible by mobility-challenged individuals by using the elevator in the adjacent Johnson Center and traversing a closet that connects the two buildings. The 2012 Campus Master Plan recommends repurposing the former gymnasium to create classrooms for the School of Education, Health & Human Performance. The master plan reports a 28,148asf space deficit for this School to meet current programmatic needs.

(Alternatives Considered) Demolition & replacement of this facility is not an option, since this is one of a very small quantity of WPA projects in the City. It is worth investigating the feasibility of redesigning the circulation space of the southern end, 3rd floor connection of the Silcox & Johnson Centers. If a clear, compliant circulation path can be achieved, this may negate the need for an additional elevator.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Robert Scott Small Building (RSS) is a 75,146gsf three-level academic building constructed in 1970 in the heart of campus as the College's first new library building since 1856. Two flanker wings were added in 1973. The last major renovation was in 1991. When the library moved to its new location (Addlestone Library) in 2004, RSS was to serve as swing space to accommodate other building renovations on campus. Space reconfigurations were minimal to serve a temporary purpose, but all offices/departments moved to the building after 2004 remain. The building currently houses 14 classrooms, faculty offices, administrative functions & student support services. This project entails an exterior renovation to correct envelope deficiencies. MEP systems will be replaced, elevators upgraded & fire sprinklers added. A comprehensive interior renovation will rethink space layouts for easier navigation, upgrade restrooms for ADA compliance, replace interior finishes & convert the majority of space to academic use. Piecemeal, disjointed office spaces will be converted to flexible general use classrooms.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 40 out of a possible 100 points. Roof, parapet & window leaks are disrupting classroom instruction & academic office operations. Stucco cracks are adding to moisture infiltration & compromising indoor air quality issues. Most MEP infrastructure is approaching 50 years old, past recommended life cycles. A high risk of system failure could result in partial or complete shutdown of building spaces. The building is located in a flood zone. The ground floor is below & occasionally floods. Therefore, envelope waterproofing & site drainage improvements are imperative. The building is heavily used to teach core curriculum classes & host student/parent orientation activities. It is a "first impression" building when entering our campus. The current floorplan is a labyrinth of office suites cobbled one-by-one from former library stack space. The vacant 3,600asf third floor open area cannot be developed/utilized until the undersized HVAC system is replaced.

The College wishes to "space-swap" classroom & administrative space between RSS & the BellSouth Building. The egress paths of the BellSouth Building (two elevators & two stairwells) were designed for administrative office use & has difficulty handling the flow of up to 1,200 students per hour. The pedestrian traffic at class-change times results in congestion at the Calhoun/St. Philip Street intersection, where sidewalks & crosswalks are undersized to handle this volume of pedestrians. Accidents have occurred & the College hopes to minimize future risk. RSS has the capability of adding 33 classrooms, allowing the BellSouth Building to convert to mostly academic/administrative office use. RSS egress should be adequate from the building's five existing stairwells, but an additional elevator on the south side of the building may be required.

(Alternatives Considered) Demolition & replacement of this facility would be premature & financially imprudent. Allowing the moisture issues to continue will further compromise indoor air quality & possibly lead to structural damage. Space assignments could remain as they are, but at the expense of safety.

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) Liberty Street Residence Hall is a 97,410 six-level 437-bed residence hall constructed in 2007 in the center of campus. There have been no significant renovations since original construction. This project will upgrade MEP infrastructure, addressing domestic hot water, HVAC airflow, dehumidification & supporting electrical upgrades. Technology infrastructure will be examined & updated as recommended. A complete interior refresh of new paint, flooring, lighting, millwork, plumbing fixtures & furniture will occur simultaneously. The College will seek Phase I approval to begin the design process in mid-2022, followed by Phase II approval for construction to commence in summer 2023.

(Justification) Prospective students & parents consider campus living environments to be among the top criteria in choosing a college or university. With an increasing supply of private student housing coming online in Charleston, it is important to have clean, up-to-date, well-maintained & reasonably priced housing facilities that can uniquely offer a sense of campus community. Liberty Street Residence Hall will be 15 years old by the time this project is initiated. It has fixed/sealed windows, so the only source of airflow is by mechanical means. The required MEP improvements will keep the facility environmentally healthy while maintaining an upper tier fee structure. Liberty Street Residence Hall is in the Tier Four housing fee structure. If the building conditions were to decline, the College may need to downgrade the building to a Tier Three fee structure. This could cause a revenue loss of about \$437K per year. The College has received complaints about temperature, airflow, humidity & hot water issues that will only increase if left unattended.

(Alternatives Considered) Considering there are no alternate housing locations for this quantity of students, the only alternative would be to repair issues slowly while residents are in place. This will cause serious infrastructure disruptions, noise & construction dust, all of which would be detrimental to the student living & studying experience. The result would be increased cost, longer duration & damaged student/parent/College relations.

Description

(Description) The Liberty Street Fresh Food Company is a 26,181 one-level 430-seat open-concept dining hall constructed in 2007 in the center of campus as the College's flagship venue. This all-you-care-to-eat cafeteria offers flame-grilled entrees, brick-oven pizza, vegetarian stir-fry, pasta & an abundant salad bar to students, faculty, staff & the public. There have been no significant renovations since original construction. A cosmetic refresh of new paint & furniture occurred in 2016. This project will be a complete renovation, including examination/upgrades of all MEP systems & food preparation equipment; updated technology infrastructure & a redesign of all back-of-house storage, preparation, cleaning, disposal & administrative areas. A dining area layout redesign will improve traffic flow & wayfinding. All interiors will be rethought with new finishes, furnishings & artwork. Programming research will determine the proper mix & placement of food preparation stations & dining areas. The former faculty/staff dining room may be converted into a separate retail concept. The College will seek Phase I approval to begin the design process in late 2022, followed by Phase II approval for construction to commence in January 2024 & conclude in July 2024.

(Justification) Prospective students & parents consider campus-dining environments to be among the top criteria in choosing a college or university. It is important to have clean, up-to-date, well-maintained, creative & reasonably priced dining facilities that can provide varied, nutritious meal offerings to suit student schedules at an excellent overall value. The Liberty Street Fresh Food Company will be 15 years old by the time this project is initiated. Dining venues typically age more quickly than other campus environments. It is important to keep our main dining facility appearing fresh, inviting & innovative.

(Alternatives Considered) There are no alternatives, considering DHEC regulations require food service facilities to maintain a certain level of cleanliness, repair & function.

Utilities	General Funds - Existing	1 Year/One Time	(7,500)
			(27,500)

Description

(Description) The Steam Energy System is a network of underground steel piping installed in 1972 that spans over 4,000 linear feet & 9 city blocks. The system is the only source of hot water & heating for approximately half of the square footage of main campus buildings serving students, faculty & staff. Multiple repairs were made to the system over the past 47 years as responses to leaks & emergencies. This project will include boiler maintenance, repair &/or replacement as needed & systematically replace the steam delivery/condensate infrastructure in a phased approach over at least five years. The system will be completely rethought to introduce redundancy & maximize efficiency, resulting in significant cost savings. The College will seek Phase I approval to begin the design process in late 2022, followed by Phase II approval for construction to commence in May 2023.

(Justification) The most recent CHE Infrastructure Condition Survey rated this system with a CHEMIS Condition Code of 38 out of a possible 100 points. The Steam Energy System is progressively failing & requires repair &/or replacement. The existing pumped steam condensate piping & its exterior casing (RICWIL) were breached in numerous sections of the distribution system. In these sections, the ~150 degree pumped (pressurized) steam condensate water & boiler chemicals were temporarily diverted to a manhole & discharged to the city sanitary system. Currently, we are discharging ~16,000 gallons of steam condensate/day, at a cost of ~\$4K/month (the cost of make-up water, boiler chemicals & energy to heat make-up water). This flow rate will increase with time and demand, thereby increasing the potential energy loss. New leaks develop routinely as pipes disintegrate. Periodic system failures have disrupted operations & cancelled classes.

(Alternatives Considered) There are no alternatives other than to defer the project, absorb higher utility costs & risk a disastrous systems failure. If the system continues to deteriorate, mobile steam generators will likely need to be leased or purchased.

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Chilled Water System is a network of underground PVC and aboveground carbon steel piping installed in 1972 that spans over 8,400 linear feet & 9 city blocks. The system is the only source of climate control cooling for approximately half of the square footage of main campus buildings serving students, faculty & staff. Multiple repairs were made to the system over the past 47 years as responses to leaks & emergencies. This project will include chiller maintenance, repair &/or replacement as needed & systematically replace the chilled water delivery infrastructure in a phased approach over at least five years. The primary/secondary pumping configuration will be replaced with a variable primary pumping system & a supplemental cooling tower will be added. The delivery system will be completely rethought to introduce redundancy & maximize efficiency, resulting in significant cost savings. The College will seek Phase I approval to begin the design process in late 2022, followed by Phase II approval for construction to commence in May 2023.

(Justification) The most recent CHE Infrastructure Condition Survey rated this system with a CHEMIS Condition Code of 40 out of a possible 100 points. The age of the central chillers range from 13 to 20 years old. A chilled water capacity study was completed in 2018 by Newcomb & Boyd Consultants & Engineers. The study indicated both the current & future anticipated tonnage requirements exceed the current operating capacity. The report's recommendations also focused on improving the existing distribution system & building piping deficiencies. Because of physical limitations, capacity expansion of the existing plant is impractical or very limited. However, several improvements can increase efficiency. These incremental improvements will not satisfy the future loads & a new chiller plant is recommended. The Chilled Water System is progressively failing & requires repair &/or replacement. New leaks develop routinely as pipes disintegrate. Periodic system failures have disrupted operations & cancelled classes. It is logistically & financially prudent to address the chilled water system replacement in tandem with the steam system replacement to minimize outages & site closures.

(Alternatives Considered) There are no alternatives other than to defer the project, absorb higher utility costs & risk a disastrous systems failure. If the system continues to deteriorate, mobile chillers will likely need to be leased or purchased.

			(10,000)

Description

(Description) The Electrical Grid is a network of overhead & underground conduit & wiring installed in the early 1970's that serves the entire main campus. Multiple incremental repairs & upgrades were made over the last 50 years as buildings were demolished, renovated or constructed. This project will examine the entire system & systematically repair &/or replace hubs, transformers, conduit, wiring, switches, surge protection & other components in a phased approach over at least five years. The delivery system will be completely rethought to ensure reliability, accommodate future load growth, introduce redundancy and maximize efficiency, resulting in significant cost savings. The College will seek Phase I approval to begin the design process in late 2022, followed by Phase II approval for construction to commence in May 2023.

(Justification) The most recent CHE Infrastructure Condition Survey rated this system with a CHEMIS Condition Code of 46 out of a possible 100 points. The age of the system has concerned our electricity supplier, Dominion Energy. They fear outages or failures from our campus could affect properties outside of our campus. Periodic system failures & surges have damaged equipment, disrupted operations & cancelled classes.

(Alternatives Considered) There are no alternatives other than to defer the project, tolerate outages, absorb higher utility costs & risk a disastrous systems failure. If the system continues to deteriorate, mobile generators will likely need to be leased or purchased.

				4,000,000

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

(Description) The College's five-year plan factors in potential land acquisitions in the event that an opportunity to expand the College's footprint should arise. The 2012 Master Plan found that utilization of existing facilities exceeds standards, yet the College faces a significant, growing space deficit. The Plan identified several land parcels located on the fringes of the existing campus that would enable the development of needed facilities as well as enhance the vibrancy of prominent city streets. Please see the attached Master Land Acquisition Plan for more detail.

(Justification) The 2012 Master Plan identified a growing space deficit at the College. Given the College's unique location within the city center and a historic zone, growth opportunities within the existing footprint are limited.

(Alternatives Considered) No alternatives exist other than continually improving the utilization of existing space. However, that is not expected to fulfill long-term space needs.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) 13 Coming Street is a four-level, 5,114gsf historic residence on the south end of campus. It was constructed in 1854 & last renovated in 1987. The College of Charleston purchased this building, a neighboring building (8 Kirkland Lane) & an adjacent parking lot in 1999. Both buildings were used for student housing from 1999 to 2015. A structural assessment was commissioned in 2013 & found significant issues with masonry cracks, foundation settling, lintel failures, moisture damage (from routine floods on the first floor) & piazza structural issues. Although the study concluded the main structure was sound, it was taken offline in 2015 in an abundance of caution & remains vacant. 8 Kirkland Lane is a 1,302gsf two-level non-historic duplex apartment building constructed in 1970. There have been no significant renovations since the College purchased the building in 1999. This project will convert 13 Coming from student housing to E&G academic/administrative office use, entailing full interior/exterior renovations, structural repairs, infrastructure modernization, fire protection/suppression systems & demolition of a non-historic addition. A study will be conducted to determine the feasibility of constructing a modern rear & side addition on 13 Coming to include accessible restrooms, elevator & infrastructural system hubs. The study will also assess the feasibility of demolishing 8 Kirkland Lane & determining the best use for the small parcel.

(Justification) 13 Coming has significant structural issues. If left unchecked, it could be a threat to the safety of the College community & the public. Until repair needs are addressed, the building cannot be safely occupied. This is one of the last developable parcels owned by the College. Redeveloping the property would not require the purchase of additional land. 8 Kirkland was part of the purchase of 13 Coming. Although structurally sound, it is prone to flooding & needs constant maintenance. It is the only College housing unit on Kirkland Lane & whether occupied or vacant, it is not a good fit for that neighborhood. Town & Gown relations have suffered as a result. Many surrounding buildings owned by private homeowners have been restored or replaced with new dwellings that are elevated above flood plain.

(Alternatives Considered) 13 Coming is a historically protected building, so demolition is not an option. No alternatives to renovation exist. 8 Kirkland could remain in place, but would continue to sit vacant. The College is hesitant to further damage Town & Gown relations with the neighborhood & does not feel comfortable placing students in a structure removed from other student housing. Kirkland Lane is not zoned for commercial use, so the College intends to explore available options for demolition, resale &/or redevelopment.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Gibson-Fronenberger House at 298 Meeting Street is a four-level, 9,266gsf, nine-unit, 29-bed prominent historic residence constructed in 1824 & substantially expanded in 1859. The National Registry of Historic Buildings protects the building from decay &/or exterior alterations. The College of Charleston purchased this building, a neighboring building (300 Meeting Street) & an adjacent 15-space parking lot in 1999. Both buildings are used for student housing. 300 Meeting Street is a 2,823gsf two-level, four-unit, 10-bed historic residence built in 1853 as a tenement on a parcel separated from 298 Meeting. No significant renovations have occurred on either structure since purchase, but the previous owner rehabilitated the properties in 1985. This project will include full interior/exterior renovations, structural repairs, infrastructure modernization & fire protection/suppression systems. A study will be conducted to determine the feasibility of removing a non-historic addition on 300 Meeting, elevating the original dwelling & adding a linear residential structure that stretches around the north & east sides of 298 Meeting. A stand-alone student residence will be considered for the south side of 298 Meeting. We anticipate a lengthy design & approval process with the City, so the College will seek Phase I approval in FY2022-23, Phase II approval in FY2023-24 & construction in FY2025-26.

(Justification) Both structures are showing signs of wear. 298 Meeting was expanded at least three times. Each addition created varying roof planes & valleys, which altered runoff paths for rain. This resulted in decades of ongoing roof leaks addressed in pieces. A holistic solution is needed. Brick repair/repointing & wood repair is required throughout. 300 Meeting is prone to flooding during severe storms. Roof & wood repairs are needed throughout. Both houses have outdated infrastructure that should be replaced.

(Alternatives Considered) 298 Meeting is protected by historic easement through the Historic Charleston Foundation, so the property must be maintained to a high level. 300 Meeting has no easement, but is a historically protected building. Demolition is not an option for either structure. No alternatives to renovation exist.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) George Street Apartments is a 102,675 four-level 199-bed student-housing complex constructed in 2007 in the center of campus. The complex is the College's flagship housing community, comprised entirely of single-occupant upperclassmen bedrooms. There have been no significant renovations since original construction. This project will upgrade MEP infrastructure, addressing domestic hot water, HVAC airflow, dehumidification & supporting electrical upgrades. Technology infrastructure will be examined & updated as recommended. A complete interior refresh of new paint, flooring, lighting, millwork, plumbing fixtures, appliances & furniture will occur simultaneously. The College will seek Phase I approval to begin the design process in mid-2023, followed by Phase II approval for construction to commence in summer 2024.

(Justification) Prospective students & parents consider campus living environments to be among the top criteria in choosing a college or university. With an increasing supply of private student housing coming online in Charleston, it is important to have clean, up-to-date, well-maintained & reasonably priced housing facilities that can uniquely offer a sense of campus community. George Street Apartments will be 16 years old by the time this project is initiated. The required MEP improvements will keep the facility environmentally healthy while maintaining an upper tier fee structure. The complex is in the Tier Four housing fee structure. If the building conditions were to decline, the College may need to downgrade the building to a Tier Three fee structure. This could cause a revenue loss of about \$228K per year. The College has received complaints about temperature, airflow, humidity & hot water issues that will only increase if left unattended.

(Alternatives Considered) Considering there are no alternate housing locations for this quantity of students, the only alternative would be to repair issues slowly while residents are in place. This will cause serious infrastructure disruptions, noise & construction dust, all of which would be detrimental to the student living & studying experience. The result would be increased cost, longer duration & damaged student/parent/College relations.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

College of Charleston

Description

(Description) The Thaddeus Street Education Center (ECTR) is a 51,313gsf two-level academic building constructed in 1980. There have been no significant renovations since original construction. The facility houses the Septima Clark Auditorium, the African American Studies Program, Upward Bound & Pre-College Programs, the Collegiate Recovery Program, the Mortimer Anthropology Lab, The Pincus Language Resource Center, the Volpe Center for Teaching & Learning & a two-level sky lit student study atrium that operates 24/7. Overall, the facility contains 22 faculty/staff offices & 29 classrooms serving about 4,400 students per weekday. This project entails an exterior renovation to correct envelope deficiencies & an interior renovation to replace MEP systems, upgrade elevators, add fire sprinklers, upgrade restrooms for ADA compliance, increase sound attenuation, refresh/replace interior finishes & upgrade/replace classroom technology & furnishings. A study will be conducted to determine the feasibility of converting some office spaces to classroom use & adding a circulation stair in the study atrium to improve wayfinding & decrease elevator use.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 59 out of a possible 100 points. The roof, parapet & curbing are reaching the ends of lifecycles. Some masonry cracks are present & should be repaired before conditions worsen. The three egress stairwells are not climate controlled, leading to air quality issues. Classrooms abutting elevator shafts/equipment rooms & below the mechanical penthouse receive an abnormal amount of noise & vibration. This has led to one large classroom being taken offline, underutilizing 884asf. The building is heavily used to teach core curriculum classes & host student/parent orientation activities. It is a "first impression" building when entering our campus. The College prefers to address the deferred maintenance issues before they worsen.

(Alternatives Considered) Demolition & replacement of this facility would be premature & financially imprudent. Allowing envelope & mechanical issues to continue will further compromise indoor air quality & possibly lead to structural damage. There is no alternative space on campus accommodate 4,400 students per weekday.

Maintenance and Repairs	General Funds - Existing	1 Year/One Time	(1,300)
Utilities	General Funds - Existing	1 Year/One Time	(650)
			(1,950)

Description

(Description) 14 Glebe Street is a 3,242gsf three-level building constructed in 1855. 16 Glebe Street is a 3,306gsf three-level building of similar style & construction built in 1855. The last significant renovations of both buildings occurred in 1987. Both buildings are prominently in the heart of campus & require historic restoration. The project will include complete renovation to address structural, envelope, MEP, accessibility, safety & wood/plaster/stucco issues. These buildings are located next to one another, so the College hopes to gain economies of scale by using one A/E & one contractor to design/construct both renovations.

(Justification) The most recent CHE Building Condition Survey (2017) rated 14 Glebe Street with a CHEMIS Condition Code of 49 out of a possible 100 points. 16 Glebe received a CCC of 40. Both buildings have moderate structural issues on the two-level piazzas, decayed structural/aesthetic wood elements (columns, windows, railings & trim), disintegrating/missing brick mortar, minor stucco cracks, minor roof leaks & no ADA access. If left unchecked, deterioration could worsen, becoming a safety threat the College community & public.

(Alternatives Considered) As historically protected buildings, demolition is not an option. No alternatives to renovation exist. It is most prudent to address building problems as soon as possible before further decay occurs.

			4,000,000

Operating Budget Impact	Fund Group	Recurs	Amount

Description

(Description) The College's five-year plan factors in potential land acquisitions in the event that an opportunity to expand the College's footprint should arise. The 2012 Master Plan found that utilization of existing facilities exceeds standards, yet the College faces a significant, growing space deficit. The Plan identified several land parcels located on the fringes of the existing campus that would enable the development of needed facilities as well as enhance the vibrancy of prominent city streets. Please see the attached Master Land Acquisition Plan for more detail.

(Justification) The 2012 Master Plan identified a growing space deficit at the College. Given the College's unique location within the city center and a historic zone, growth opportunities within the existing footprint are limited.

(Alternatives Considered) No alternatives exist other than continually improving the utilization of existing space. However, that is not expected to fulfill long-term space needs.

College of Charleston

Description

(Description) The JC Long Building is a 40,792gsf four-level academic building constructed in 1970 as offices for Southern Bell Telephone Company. The College purchased the building in 1986. The last significant renovation was 2015, limited to building envelope repairs (new roof, brick repair, resealing existing windows). The facility contains 107 faculty/staff offices & 6 classrooms serving about 750 students per weekday. This project entails an interior renovation to replace MEP systems, upgrade the elevator, add fire sprinklers, upgrade restrooms for ADA compliance, refresh/replace interior finishes & upgrade/replace classroom technology & furnishings. Exterior windows & doors will be evaluated for potential replacement. Landscaping & hardscaping will be reconfigured to create shaded outdoor study areas & rest stations for guests on campus tours. The 2012 Campus Master Plan calls for this building to serve as expansion space for the School of Business & Economics (SOBE), since it connects to the SOBE's Tate & Beatty Center buildings. Another CPIP project for this planning year is for land acquisition to build a new SOBE facility. In that case, the JC Long & existing SOBE buildings would retain the same use, but would be allocated to &/or among departments in the Schools of Education, Languages &/or Humanities. The chosen path is currently unknown, but regardless of eventual occupant(s), a study will be conducted to determine the feasibility of converting the first floor to exclusively classroom use & place offices on upper floors to improve egress & decrease elevator/stairwell use.

(Justification) The most recent CHE Building Condition Survey (2017) rated this building with a CHEMIS Condition Code of 62 out of a possible 100 points. The restrooms on all floors are original to the building (designed for office use), are not ADA compliant & do not adequately serve the number of individuals using this building each day. Most of the interior walls are made of a modular partition system original to the building. Replacement parts were discontinued decades ago, so interior reconfigurations are challenging. The cores of floors 2-4 are configured haphazardly & do not utilize space to full potential. Some mechanical equipment has been replaced. However, original ductwork, electrical & plumbing systems remain & are reaching the ends of lifecycles.

(Alternatives Considered) Demolition & replacement of this facility would be premature & financially imprudent. There may be alternative space on campus accommodate 750 students, that is not the case for 110 faculty & staff.

Maintenance and Repairs	General Funds - Existing	1 Year/One Time	(1,800)
Utilities	General Funds - Existing	1 Year/One Time	(930)
			(2,730)

Description

(Description) 19 St. Philip Street is a 3,300gsf three-level building constructed in 1859. The last significant renovation was in 1987. 88 Wentworth Street is a 5,991gsf four-level building of similar style & construction built in 1863. The last significant renovation was in 1990. These are two of the five campus buildings known as the Riggs Tenements, originally constructed as five identical Italianate structures. They are recognized as one of the earliest developments of speculative housing in the region. Both buildings require historic restoration. The project will include complete renovation to address structural, envelope, MEP, accessibility, safety & wood/plaster/stucco issues. These buildings are located near one another, so the College hopes to gain economies of scale by using one A/E & one contractor to design/construct both renovations.

(Justification) The most recent CHE Building Condition Survey (2017) rated 19 St. Philip Street with a CHEMIS Condition Code of 49 out of a possible 100 points. 88 Wentworth received a CCC of 52. Both buildings have moderate structural issues on the two-level piazzas, decayed structural/aesthetic wood elements (columns, windows, railings & trim), minor stucco cracks, minor roof leaks & no ADA access. If left unchecked, deterioration could worsen, becoming a safety threat the College community & public.

(Alternatives Considered) As historically protected buildings, demolition is not an option. No alternatives to renovation exist. It is most prudent to address building problems as soon as possible before further decay occurs.

Professional Services/Fees	5,500,000		
	60,000,000		

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

(Description) The School of Business currently occupies 70,533gsf on main campus consisting of the Beatty Center (42,192gsf, built in 2005), Tate Center (18,130, built in 1998) & one floor of the JC Long Building (10,211gsf, built in 1970). The School offers nine undergraduate majors, an honors program, several interdisciplinary minors, an M.S. in Accountancy & a one-year MBA. Approximately 3,000 undergraduate and graduate students are enrolled in the School's majors or programs, served by over 100 faculty & staff. The College hopes to identify property close to the College's main campus to construct a new School of Business that is capable of future expansion, & attracting tomorrow's professionals & entrepreneurs.

(Justification) The 2012 Campus Master Plan reported the School of Business had a space deficit of 3,764asf (17%) under national guidelines in 2010. By 2020, the deficit is expected to be 8,714asf (40%). Currently, no expansion space is available. Zoning restrictions prohibit the College from building upward. The College has converted amenity space to instructional & office use, even using storage closets as offices. All of the School's buildings are showing signs of age in condition & infrastructure. Pedagogy is evolving, gradually making instructional environments functionally obsolete. Cutting-edge facilities will attract new students, faculty & staff as well as retain those existing.

(Alternatives Considered) There may not be affordable properties available near the main campus. Therefore, an alternative CPIP is being submitted to expand the School of Business into a renovated JC Long Building.

	4,000,000	Other Funds - Excess Debt Service	4,000,000
			4,000,000

Operating Budget Impact	Fund Group	Recurs	Amount

Description

(Description) The College's five-year plan factors in potential land acquisitions in the event that an opportunity to expand the College's footprint should arise. The 2012 Master Plan found that utilization of existing facilities exceeds standards, yet the College faces a significant, growing space deficit. The Plan identified several land parcels located on the fringes of the existing campus that would enable the development of needed facilities as well as enhance the vibrancy of prominent city streets. Please see the attached Master Land Acquisition Plan for more detail.

(Justification) The 2012 Master Plan identified a growing space deficit at the College. Given the College's unique location within the city center and a historic zone, growth opportunities within the existing footprint are limited.

(Alternatives Considered) No alternatives exist other than continually improving the utilization of existing space. However, that is not expected to fulfill long-term space needs.

Description

This project is requested to replace the HVAC and Lighting systems on the Columbia Campus. For the HVAC systems, included in this replacement would be all of the central air handlers for all buildings, the central boiler, the addition of outside air units to 3 buildings and the addiditon of VAV systems in 2 buildings. For the lighting systems, included in this replacement would be all interior lighting and associated controls. With the renovations, 2 building would also need new ceilings. The agency sees no alternative ways to fund this project.

	8,000,000		8,000,000

Description

Denmark Technical College is asking for \$5 million to redesign and modernize welding labs campus wide. These renovations will enable the institution to prepare students for careers in advanced pipe, robotic and laser welding. These enhanced welding labs will also allow the College to focus on modern welding techniques used by Boeing and nuclear welding techniques that meet the needs of SCANA, Southern Company, Savannah River Site, and Volvo. Denmark Technical College seeks to additionally redesign and modernize the institution's existing nursing lab and to implementing a new simulation lab for the purpose of providing students with hands-on training in a real-life setting. Denmark Technical College is requesting \$3 million to secure modernized equipment needed to equip the institutions renovated welding and nursing labs. This equipment will be dedicated to prepare welding and nursing students for entry directly into the workforce upon completion of their program of study with specialized skills in in the professions of welding, advanced manufacturing, engineering, building and construction, nurse aide assistant, and practical nursing. No alternatives were considered for this project.

Operating Budget Impact	Fund Group	Rekurs	Amount
Maintenance and Repairs	General Funds - Existing	Indefinitely	

Description

This project is to replace booster pumps and risers and install isolation valves in the chilled and hot water distribution systems within the building. These are the lines that transport the cold and hot water that provides the heating and cooling throughout the building during the year. These lines are original to the building and have developed leaks over the years. Replacing the booster pumps and risers will ensure continued flow of water for heating and cooling. Additionally, the isolation valves will allow for prevention of water damage when leaks do occur. They will also prevent having to completely turn off all of the water to the building in the event of a leak. This need was identified through facilities condition assessments. No other alternatives have been considered.

	1,089,000		

Operating Budget Impact	Fund Group	Rekurs	Amount
Maintenance and Repairs	Other Funds - Existing	Indefinitely	_____

Description

This project is to replace booster pumps and install isolation valves in the chilled and hot water distribution systems within the building. These are the lines that transport the cold and hot water that provides the heating and cooling throughout the building during the year. These lines are original to the building and have developed leaks over the years. Replacing the booster pumps will ensure continued flow of water for heating and cooling. Additionally, the isolation valves will allow for prevention of water damage when leaks occur. They will also prevent having to completely turn off all of the water to the building in the event of a leak. This need was identified through facilities condition assessments. No other alternatives have been considered.

Maintenance and Repairs	Other Funds - Existing	Indefinitely	_____

Description

This project is Phase 1 of replacing the entire HVAC system for the Columbia Mills Building (except for the Planetarium section). This phase will include the air handlers (approximately 24). The current systems are more than 30 years old and do not provide proper cooling and heating for the occupants of the building. The systems are unreliable and are not efficient. This need was identified by the consultant in the real property project. No other alternatives have been considered.

	1,000,000		

Operating Budget Impact	Fund Group	Rekurs	Amount
Maintenance and Repairs	Other Funds - Existing	Indefinitely	

Description

This project is to replace the booster pumps and risers and install isolation valves in the chilled and hot water distribution systems within the building. These are the lines that transport the cold and hot water that provides the heating and cooling throughout the building during the year. These lines are original to the building and have developed leaks over the years. Replacing the booster pumps and risers will ensure continued flow of water for heating and cooling. Additionally, as there are not sufficient funds to replace all of the lines, the isolation valves will allow for prevention of water damage when leaks occur. They will also prevent having to completely turn off all of the water to the building in the event of a leak. This need was identified through facilities condition assessments. No other alternatives have been considered.

Description

This project is Phase 2 of replacing the entire HVAC system for the Columbia Mills Building (except for the Planetarium section). The current systems are more than 30 years old and do not provide proper cooling and heating for the occupants of the building. The systems are unreliable and are not efficient. This phase is to replace the booster pumps and risers and install isolation valves in the chilled and hot water distribution systems within the building. These are the lines that transport the cold and hot water that provides the heating and cooling throughout the building during the year. These lines are original to the building and have developed leaks over the years. Replacing the booster pumps and risers will ensure continued flow of water for heating and cooling. Additionally, as there are not sufficient funds to replace all of the lines, the isolation valves will allow for prevention of water damage when leaks occur. They will also prevent having to completely turn off all of the water to the building in the event of a leak. This need was identified by the consultant in the real property project. No other alternatives have been considered.

Description

This project includes renovation of the office/administration building/gatehouse, retail sheds, and possibly the restaurant; and construction of a maintenance shed at the state-owned Greenville State Farmers Market (GSFM). South Carolina Department of Agriculture (SCDA) took ownership of the property and improvements in 1979 from Greenville County, so the facilities are at least 40 years old. Deferred maintenance funding requests have been submitted through the state budget process, but not appropriated, several times. In December 2017, SCDA sold a parcel of property at GSFM and wishes to reinvest a portion of the proceeds in the remaining property (including this request). There is a current project to renovate the site, including utilities, asphalt, water, sewer, landscaping and fencing.

Other Permanent Improvements	100,000		
Professional Services/Fees	250,000		
Utilities	750,000		
	4,500,000		

Description

The project is to fund the most critical upgrade or replacement of major building systems and supportive infrastructures which would increase operational and security efficiencies of the correctional institutions and support facilities. The Agency has a large number of needs which, in total, includes and involves all disciplines and trades to address the physical deterioration aspect of long-term use, the need for overall facility renewal due to technological obsolescence, the replacement of building systems which have become functionally inadequate, and the upgrading of supportive infrastructures which are no longer capable of adequately performing their function (i.e. fire/life safety codes, accessibility, energy conservation, and environmental health, including indoor air quality and asbestos removal). This is a reoccurring Capital Renewal Request. The Scope of Work will include the following Projects and will be accomplished by a combination of general contractors and Agency's in-house inmate work forces:

1. Perry CI - Q-Dorms HVAC Replacement (\$900,000),
2. Leath CI - Chiller Replacements (\$1,400,000),
3. Goodman -Window Replacement (\$400,000),
4. Ridgeland CI - Chiller Replacement (\$1,200,000),
5. Allendale CI - Kitchen Boiler Replacement (\$200,000),
6. Evans CI - RHU Icon Plumbing System - \$130,00, and
7. Manning CI - Kitchen Boiler Replacment - \$270,000

Description

This Capital Renewal request is to fund the most critical renovation and equipment needs of maintenance and repairs of the Fire Alarm Systems at various correctional institutions statewide and administrative/support buildings on the Broad River Complex. These system renewals are due to technological obsolescence, functionally inadequacy, and no longer capable of adequately performing their function. Non-functioning or intermittent interruptions which significantly impact the normal operations of the facilities, and may be cited for safety hazard. This is a reoccurring Capital Renewal Request. The Scope of Work will include the following Projects:

1. Lee CI - Fire Alarm Replacement (\$2,500,000)
2. Tyger River CI - Fire Alarm Replacement (\$3,000,000)

Scope of work will be accomplished by a combination of general contractors and Agency's in-house inmate work forces.

Professional Services/Fees	1,500,000		
Site Development	1,250,000		
	15,900,000		

Description

This request is to fund the design and construction of a new efficient food service warehouse facility on the SCDC Broad River Complex. The new food service complex will include parking, loading docks, industrial size freezer and cooler storage holding (approx. 18,500 s.f.), dry storage (approx. 32,000 s.f.) and office/administrative space of approx. 8,600 s.f. This would allow the Agency to increase the onsite food production through increased farming operations and allow the Agency to preserve the excess crops for use during the rest of the year, which decreases the need to purchase produce. Larger dry storage space would allow the Agency to save on food costs through purchasing these goods in greater quantities while increasing purchasing power.

The current Food Service Warehouse was built in 1980 and consists of 20,900 square feet of dry storage 2,462 square feet of cooler space and 4,640 square feet of freezer space. The dry storage is contained in six (6) separate locations and is undersized. The locations are oddly shaped and do not provide efficient storage or shipment of food items. Food for 22,000 inmates is received in this facility and distributed on a weekly basis to all 21 correctional institutions. Upkeep and maintenance of this facility is ever increasing.

	667,000,000		

Description

This project is to construct a new maximum security level correctional institution to house 3,000 inmates. Once complete it will replace two or three correctional institutions that are inefficient for security and have high operating costs. SCDC has not constructed a new correctional facility in over 20 years. The new facility will be efficient, proficient, and state-of-the-art for housing inmates classified as the highest security risks in the prison system and those who pose an extremely serious threat. Support services areas will include food services/kitchen, dining and storage facilities large enough to accommodate both the staff and the inmate population. It also contains space for administration, security, medical, visiting, education, vocation, industries, commissary, laundry, chapel, and multipurpose functions. Each of these areas provides inmate support and program spaces in compliance with the state's operational requirements for a safe and secure environment for staff, visitors, and inmates. Security will be provided with multiple passive and active security elements to ensure the safety of public, visitors, staff, and inmate population.

Description

DESCRIPTION: The project scope includes replacement of 25-year-old variable air volume (VAV) terminals for the Whitten Center Dorm 205 HVAC system. The new VAV terminals will be connected to existing ductwork and existing piping. New control valves and VAV terminal controls are included and will connect full building HVAC system to the existing campus energy management control system. The work includes necessary ceiling work, test & balance, and other miscellaneous work associated with the HVAC system for this dormitory with medically fragile residents.

JUSTIFICATION: The existing HVAC system is at the end of it's useful life, undependable, energy inefficient, and difficult to maintain inoperable condition.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served in this building, system replacement is the only responsible alternative.

Description

DESCRIPTION: The project includes prioritization of HVAC equipment replacement based on age and maintenance issues to advance removal of old HVAC systems with R-22 refrigerant. The U.S. EPA, in cooperation with other agencies and groups around the world, initiated a phase out of many ozone-depleting agents as part of an international agreement known as the Montreal Protocol. The production/import of R22 will be continually reduced by law until 2020, when all production/import will be eliminated. Only recycled R22 refrigerant will be available to service existing air conditioners after 2020.

JUSTIFICATION: This project will be used to replace failed or failing HVAC equipment that has reached its useful life expectancy and to avert uncomfortable conditions for the clients we serve. The replacement of HVAC equipment will be done Campus Wide at our five Regional Centers (Coastal, Midlands, PeeDee, Saleeby, & Whitten) and will cover Administrative, Office/Support, Program/Academic, Healthcare/Housing-Dormitory Residential, Gym, & Food Service Buildings. ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served at these buildings, system upgrade and/or replacement is the only responsible alternative, other than replacing the entire building.

Description

DESCRIPTION: This project involves funding for emergency generator replacement, repair, and maintenance at Midlands Center Dorms.

JUSTIFICATION: SCDDSN facilities must be prepared to operate continuously, providing safety and care for consumers with disabilities at all times, including during power outages and emergency situations. Aging generators must be tested, maintained, repaired, and replaced to provide reliable emergency power and to meet regulatory standards for care. Past experiences with emergency generators has re-enforced the necessity of this life/safety requirement, especially for the medically fragile consumers that the Department serves.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served in this building, system replacement is the only responsible alternative.

Description

DESCRIPTION: The project scope includes relocating the 2008 60 kW natural gas generator from Dorm 110 to Building 210. The 210 facility is a program building and is also used to house staff during an emergency situation. The existing Building 210 generator is 32 years old, and is due for replacement. The existing Dorm 110 generator is not large enough to fully power the entire HVAC system and building load. The project scope includes installation of a new 100 kW natural gas generator for Dorm 110, transfer switch replacement, and other emergency backup power related work.

JUSTIFICATION: This project will be used to replace failed or failing generator equipment that has reached its useful life expectancy and to avert uncomfortable conditions for the clients we serve.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served in this building, system upgrade and/or replacement is the only responsible alternative, other than replacing the entire building.

Description

DESCRIPTION: The project scope is to replace the existing 53-year-old campus high voltage power grid to meet Dominion Energy South Carolina, Inc (DESC) standards so that SCDDSN can exit the high-voltage distribution business at Coastal Center. SCDDSN owns the Coastal Center campus wide electrical power distribution grid. However, SCDDSN has no staff with required expertise to maintain this system. The overhead facilities and underground cable are beyond it's useful life expectancy. Several partial failures on underground cable have occurred, as well as downed overhead lines due to storms in recent years. SCDDSN recognizes the safety and reliability issues with the Coastal Center electrical distribution grid.

JUSTIFICATION: This project will replace existing high voltage electrical distribution grid at Coastal Center to avert catastrophic failure, including rebuilding the overhead lines, replacing the underground primary, and replacing transformers currently feeding the facility. When all is complete, all primary facilities will meet utility provider standards.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served campuswide, system replacement is the only responsible alternative.

Description

DESCRIPTION: Replace the 28-year old, 230 kW diesel emergency backup generator with new 250 kW diesel emergency generator at Whitten Center Dormitory 204. Reliable backup power is a code requirement for Intermediate Care Facilities for individuals with Intellectual Disabilities (ICF-IID). According to OMB Circular A-76, Performance of Commercial Activities, the useful life for generators or generator sets is 19 years, thus this generator has more than met its useful life expectancy.

JUSTIFICATION: This project will replace existing 230 kW diesel emergency backup generator at Whitten Center to avert catastrophic failure. When all is complete, this facility will meet OMB Circular A-76 standards.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served campuswide, system replacement is the only responsible alternative.

Description

DESCRIPTION: The project scope includes mitigation of indoor air quality issues, replacement of aging and failed HVAC equipment, duct cleaning, bathroom renovations, replacement of interior finishes, lighting upgrades, and other miscellaneous work to put this dormitory back into service.

JUSTIFICATION: Healthy environmental conditions must be maintained for Individuals with Intellectual Disabilities served at our Pee Dee Center campus.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served campuswide, system replacement is the only responsible alternative.

Description

DESCRIPTION: The project scope includes prioritization of HVAC equipment replacement based on age and maintenance issues, as well as a continuation of prior year project to replace remaining HVAC systems with R-22 refrigerant.

JUSTIFICATION: The U.S. EPS, in cooperation with other agencies and groups around the world, initiated a phase out of many ozone-depleting agents as part of an international agreement known as the Montreal Protocol. The production and import of R-22 will be continually reduced by law until 2020, when all production and import will be eliminated. Only recycled R-22 refrigerant will be available to service existing air conditioners after 2020. The replacement of HVAC equipment will be done Campus Wide at our five Regional Centers (Coastal, Midlands, PeeDee, Saleeby, & Whitten) and will cover Administrative, Office/Support, Program/Academic, Healthcare/Housing-Dormitory Residential, Gym, & Food Service Buildings.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served campuswide, system replacement is the only responsible alternative.

Description

DESCRIPTION: The project scope includes the replacement of now 26-year-old 100 kW gas emergency backup generator at Dorms 102 & 104; and the replacement of the now 26-year-old 100 kW natural gas emergency backup generator at Dorms 103 & 105. The new generators will be 130 kW-natural gas generators.

JUSTIFICATION: Reliable backup power is a code requirement for Intermediate Care Facilities for individuals with Intellectual Disabilities (ICF-IID). According to OMB Circular A-76, Performance of Commercial Activities, the useful life for generators or generator sets is 19 years, thus these generators have more than met their useful life expectancy.

ALTERNATIVES CONSIDERED: Due to health and safety concerns for those with disabilities served campuswide, generator replacement is the only responsible alternative.

Site Development	1,400,000	Initial Request	
	1,400,000	Other Funds - Operating Revenue	1,400,000
			1,400,000

Description

Several county school bus shops are in desperate need of parking lot paving which has now created safety hazards. We need to repair the parking lots at the following bus shops: Georgetown, Berkeley, Colleton, Brunson, Calhoun, Cherokee, Chester, Chesterfield, Marlboro, Latta, Kershaw, Williamsburg, Lee, Lancaster, Lexington, Lower Richland, Richland, Spartanburg, Sumter, York, Anderson, Greenville, Johnston, Laurens, Orangeburg, Oconee, Pickens, and Taylors. State-owned school buses are maintained on these premises and most facilities are over forty years old and lack proper maintenance due to lack of funding. Repairs can be addressed by sealing the cracks, then sealing the pavement, then restriping. We estimate an average cost of \$50,000 per school bus shop.

Roofing Repair and Replacement	525,000	Initial Request	
	525,000	Other Funds - Operating Revenue	525,000
			525,000

Description

Several county school bus shops are in in desperate need of roof repair due to leaks and this project includes immediate repair of roofs at the following bus shops: Beaufort, Dorchester, Williamsburg, Marlboro, Charleston, Chester, Fairfield, Berkeley, Darlington, Colleton, Richland, Anderson, Greenville, Johnston, and Orangeburg. The majority of these shops are over forty years old. The facilities have not been properly maintained due to lack of funding. We estimate a cost of \$35,000 for roof repair at each of the listed bus shops. These facilities are used on a daily basis to maintain all state-owned school buses. The projects will typically consist of inspecting and replacing fasteners; pressure washing and cleaning the entire surface; applying rust inhibitor; coating and sealing fasteners to make them waterproof; and installing roof material. The goal of this repair to the existing facilities is to extend the useful life of the roof by another twenty plus years.

Description

This parking lot serves the Midlands SC Works Center. This lot has a moderate level of weathering and fatigue. Cracks, potholes and pavement patches are present in multiple locations. This project would be to rehabilitate the parking lot with a 2" asphalt overlay. The overlay would decrease unlevel asphalt as well as reduce or eliminate water penetration that would further undermine the parking lot structure. The budget has been revised because the previous CPIP submission budget estimate did not include a new french drain, additional equipment (e.g., wheelstops), escalation, and current market conditions.

Operating Budget Impact	Fund Group	Recurs	Amount
Interest	Other Funds - Existing	Indefinitely	

Description

This project is to repair window leak issues that exist in multiple areas throughout the building. When we experience a hard rain, water infusion occurs at the windows where water will come through the window and wet the floor and items next to the window. The project would remove and replace all window glazing and weather stripping. Also, the entire building would be sealed to prevent water from "wicking" through. Revise project name to correct format.

Description

The David Building service elevator is past its useful life expectancy and is 47 years old. It is due for renovation. Equipment failure rendering the elevator unuseable has been occurring often and more frequently, which may affect life safety should there be an entrapment. Additionally, this has disrupted agency maintenance operations. The agency has been working with elevator consultant Jim Van Deusen to determine an accurate project budget.

Description

This project is to remove and replace the existing flooring in Sims Aycock with carpet or VCT depending on the location in the building. The current carpet is dirty, thread bear, buckled and is presenting safety issues in the building. DHEC has tried to clean the carpet and also to re-stretch it to remove the buckles. This has not solved the problems we are having. The first phase of this project will be to replace all of the carpet in the common areas of the Sims Aycock building.

Description

This project is to replace the ceiling tile and grid system in the Aycock Building. The current system is a spline system and many of the ceiling tiles are not locking together causing the tiles and splines to fall out of the ceiling and landing on desks and employees themselves. This has been addressed numerous times with maintenance staff, but the age of the system and difficulty in weaving the ceiling tiles back together properly has caused this system to be a safety concern. DHEC has tried to look at other ways to deal with this system but the most cost effective way is to replace with a standard 2x2 suspended ceiling.

Description

This project is to repave the parking lot, repair and replace curbing at the Florence Health Department. The asphalt that is currently in place is believed to be original to the building (20 years +) and is in poor condition. This building serves the public of Florence County and we have had customers and employees trip and fall due to the uneven surfaces of the parking lot, curbs and sidewalk. DHEC has tried to have the curbing repaired but the results were not satisfactory. This parking lot is also shared with Dept of Mental Health. DHEC will work with Mental Health in getting this work done.

Description

This project is for the installation of an Access Control system to expand this to the Regional Offices as needed. The first phase will to install this access control to the Regional Coordination Centers that are occupied during disasters. This will allow for a uniformity of access to these locations without having to "pass around" keys and access codes. The system is already in place in the Columbia area building, we are just expanding this to our county offices for continuity of the system. No other alternates will integrate into our system.

	1,320,000		1,320,000

Description

The existing electrical power grid at the Columbia complex is owned and maintained by SCDJJ for the entire Columbia complex on Broad River Road and Shivers Road. The system has not been upgraded to meet current standards and as a result, the cost to maintain is great. The outage of power on the grid for our critical work has been impacted many times by our inability to repair promptly. The purpose of this project is to bring the grid up to current standards and provide a safer and more energy efficient system. Dominion has substations on Broad River Road and access is superior to any option. There are no other feasible alternatives.

Description

SCDJJ currently has over 250 Heating and air conditioning unit that operate on R22 freon. R22 freon will no longer be produced January 1st of 2020. Therefore we will begin replacing units as they go bad with more efficient units in phase one. Estimated costs were increased due to our new forecast involving the manufacture of custom components.

We considered replacing the HVAC systems in house but due to the size required of these new systems, for our facilities, we find this alternative no longer feasible.

Description

Project #1 -SCDLLR is proposing to complete the second phase of its 5-year plan to replace the 25-year old HVAC systems throughout the Fire Academy campus on the state owned property at the Monticello Road location, which houses the Division of Fire and Life Safety. The intent of the replacement project is to replace systems that are requiring costly repairs that far exceed the value of replacement given the more energy efficient systems now on the market. Furthermore, the replacement project will run in phases and follow a structured project plan which will reduce any impedance of programs and activities at the Fire Academy and the Division operations as a whole. SCDLLR completed Phase 1 of this initiative in FY18-19, which was originally requested in the amount of \$100,000. Paperwork was remitted to close Phase 1 of the 5-year plan because the remaining balance of the originally requested amount was not sufficient to purchase another large ton unit.

Description

Project #3 - SCDLLR is proposing a bathroom renovation project within four, existing, buildings (Cafeteria, Training Classroom - Building #4, and Field Training Bathroom Facilities) on the state owned property at the Monticello Road location, which houses the Division of Fire and Life Safety. The intent of the renovation is to update the existing bathroom/restrooms with new toilets, urinals, sinks, vanities, fixtures and showers (if present). The current bathroom elements are original to the 25 year old buildings and have various degrees of cracked porcelain, leading valves, and chipped or water damaged laminate vanities. The new elements provided in this renovation will also ensure energy and water efficiency usage in these buildings relative to excessive usage. The cafeteria is a 7000 square foot building and Building #4 is 6161 square foot building. The Field Training Bathroom Facility (referred to as Rear Area Restroom - Building 16A, on the Real Estate report) is 654 square feet. Student Processing Building (9A) and the Instructor Building (9B), but they are 2093 and 3532 square feet, respectively. All buildings have separate restroom facilities for men and women.

Description

Project #8 - SCDLLR is proposing to replace and install new power generators (up to approximately 5) located throughout the 208 acre campus on the state-owned property at the Monticello Road location, which houses the Division of Fire and Life Safety. The intent of the generator installation and replacement is to insure continuity of services from the Division during emergent issues, such as natural disasters, when there may be an interruption to the campus power source. This was an issue that was identified in SCDLLR's Emergency Preparedness Plan and also because the campus often becomes a Command Hub for other agencies like FEMA Urban Search and Rescue Teams. Emergency generators include Cafeteria, Denny Auditorium, Fire Marshal Office, Fire Station, Maintenance Shop.

Description

Project #9 - SCDLLR is proposing to complete an architectural review of the over 20-years-old Denny Auditorium Building (#5) at the campus of the state-owned property at the Monticello Road location, which houses the Division of Fire and Life Safety. This review would include detailed modification plans for the structure. The scope of the project will be to upgrade the existing auditorum with more current audio visual equipment and technology, as well as to install sound proofing, carpet, and new tables and chairs for seating. This facility is used by various groups from the fire service community throughout the State, outside industry for training, as well as numerous State agencies for large events/meetings. Therefore, it is recommended that the bathrooms also be updated and renovated to replace crack porcelain, leaking valves, and chipped or water-damaged laminate vanities. The new elements provided in this renovation project will also insure energy and water efficiency usage in this building relative to excessive usage.

Description

Project #13 - SCDLLR is proposing to construct a fire inspections training lab to create a hands-on training environment for Fire Marshals/Inspectors at the state-owned property at the Monticello Road location, which houses the Division of Fire and Life Safety. This project will build the necessary training environments required to test inspectors/marshals and to certify them for their work. This training environment currently does not exist in South Carolina.

Utilities	General Funds - Existing	>5 Years	(15,000)
			(30,000)

Description

The project is to replace 2 of the 3 – 320-ton air cooled chillers. All 3 of the existing chillers are 13 years old and have had several issues recently making them unreliable. All 3 units are out of warranty and parts are becoming difficult to find.

The chillers affects the 220 Veteran Nursing Home Patients that reside there and the 225 staff. The patients are sensitive to temperature change and is critical to their safety and wellbeing that the chillers are reliable.

Currently, rental chillers are being used to assist in cooling the facility. The units provide cooling for 2 building totaling 138,348 sqft. Repairs have begun on one of the 3 chillers to try to get it operational so that it can serve as a backup for the rental chillers and then for the new chillers. We will continue to try to repair the existing chillers but given the fragile condition of many of the 220 Veteran Nursing Home Patients it would be better to replace 2 of the 3 units with new reliable units.

Description

The Coastal Empire CMHC is located in Beaufort, SC and is 16,766 square feet. The building is conditioned by 15 split system heat pumps installed in 1995, consisting of outdoor condensing units and indoor air handling units which are well past their useful life and require replacement. The indoor units in the attic also require replacement of all ducting, dampers and refrigerant lines, as well as reconfiguring of the mountings to allow proper maintenance access. The existing fire sprinkler system has experienced multiple leaks over the last several years and requires replacement. The Fire Alarm system also needs to be upgraded due to age and parts availability. The shingle roof is original and needs to be replaced. The roof's warranty has expired and is showing signs of age. Replacing the roof will also help with the HVAC and sprinkler project allowing greater access to the space below. The new roof will be an insulated roof so the new sprinkler system can be installed as a wet system helping with the cost and maintenance of the system. The alternative is to continue to work in inefficient/costly facilities and leases and make the necessary deferred maintenance repairs.

Description

This project is to replace the original HVAC distribution system including ductwork, underground chilled water piping, and controls. The cooling towers at the energy plant also require replacement. The existing system is beyond its normally expected service life, is difficult to maintain due to limited service parts and obsolete technology and is experiencing increased frequency of system failures. The system as installed does not meet the current ventilation guidelines for ASHRAE 62 and should be upgraded.

The existing sprinkler system dates back to original construction and has experienced failures at piping joints, valves, and fittings. All the piping in this system is standard black steel schedule 40 piping and requires replacement.

The additional funding request is for the replacement of semi-recessed sprinkler heads with Anti-Ligature sprinkler heads in patient areas.

Description

Crafts Farrow State Hospital Campus is located on Farrow Road in Northeast Columbia. Most of the supporting electrical distribution infrastructure is at least 40 years old. The Department of Mental Health owns and maintains the electrical substation, as well as the overhead and underground portions of the distribution system. Many of the existing components including the substation, transformers, wooden poles and the pole mounted switches are in poor condition and need to be replaced. Over 4000 feet of the underground feed cables to Morris Village and Bryan Hospital are over 40 years old, have exceeded their useful life and require replacement.

The open switching structure adjacent to the SCE&G/Dominion substation is not fully functional and is a safety hazard. Only one of the switches is operational and the structure needs to be replaced. Sections of the overhead distribution system are corroded and need to be replaced. There are some underground cables that need to be replaced due to age, including the cables from the SCE&G/Dominion substation feeding Bryan and Morris.

We are awaiting an analysis from SCE&G/Dominion which would estimate the life cycle costs of elimination of the substation and replacing it's function by new direct feeds to the major campuses.

Other Costs	18,297		470,000
Professional Services/Fees	48,300		
	470,000		

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

This project to repair/replace the existing drain line system under the kitchen in the Campbell Veterans Nursing Home. The work shall include digging up the existing drain system under the slab in the kitchen and replacing with new due to multiple leaks from old and corroded metal lines. The work shall also include line or coating piping outside of scope and repair to a wall between the kitchen and food serving line with 4' high CMU block wall. The contingency is 25% due to the unknowns under the slab that may require more than simply repair/replace the drain lines.

This repair is needed to ensure the kitchen drains are working correctly. If not addressed, these issues could result in the kitchen being closed down and having to source meals for the 218 VA Long-term Nursing Home Residents. If this allowed to go on longer the project will cost even more to repair repairs, and there will be life safety issues.

Alternatives- Out source all of the facility meals at a greater cost and quality.

Description

This project is to address deferred maintenance issues in our community mental health facilities. DMH has deferred maintenance issues totaling over \$40 million. This request is to address the most urgent building needs and examples include heating and air conditioning system repairs at Berkeley, Coastal Empire, Orangeburg, and Waccamaw Mental Health Center buildings; interior and exterior repairs at Piedmont, Orangeburg and Tri-County, and Fire Sprinkler repairs at Coastal Empire.

This work is needed to ensure the buildings are maintained in an adequate condition to enable the staff to carry out their missions. Correcting these deferred maintenance issues will help extend the useful life of the buildings. If not addressed, these issues could result in reduced productivity, more costly repairs, and life safety issues.

Alternatives- Continue to address the most critical maintenance issues and reacting to emergencies as they arise.

			(10,000)

Description

This project is to address deferred maintenance issues in our in-patient buildings. This request is to address the most urgent building needs, focusing on those items identified by the Joint Commission which may jeopardize our hospital accreditation if not corrected. Examples include upgrading hardware and fixtures at Bryan to meet current anti-ligature standards. The December 2018 Joint Commission for Hospital Accreditation report cited Harris Psychiatric Hospital for multiple ligature risks. In order to eliminate these risks it will require the change out of hinges, lights, locks, sinks and other potential attachment points. The Lodges are all occupied and will require work to be completed utilizing a phased approach. A prototype bathroom has been approved by Hospital Risk Management staff and funding has been identified to complete the work. Phase I for J12-9766 was approved at the October 2018 JBRC. Other items include the repair and replacement of sprinkler heads and associated fire protection and alarm system equipment, and items relating to environment of care at Harris, Bryan and Tucker Center. This includes the nurse call system, flooring replacement, laundry renovations at the Roddey Pavilion, and other miscellaneous deferred maintenance issues.

This work is needed to ensure the buildings are safe and to comply with our approved Evidence of Standards Compliance by the Joint Commission. If not addressed these issues could result in fines from regulatory agencies, more costly repairs, and life safety issues.

Alternatives- Continue to address the most critical maintenance issues and reacting to emergencies as they arise.

--------------------------------	-------------------	---------------	---------------

Description

Renovations in Lodges A, G, H, J, and K to meet Joint Commission ligature resistant standards. Includes replacement of all trim and hardware that contain potential attachment points, including sinks, showers, toilets and door hardware.

The 2015 Joint Commission for Hospital Accreditation report cited Harris Psychiatric Hospital for multiple ligature risks in Lodges A, G, H, J, and K. In order to eliminate these risks it will require the change out of hinges, lights, locks, sinks in the bathrooms and other potential attachment points on bedroom doors. The Lodges are all occupied and will require work to be completed utilizing a phased approach. This project would fund renovations to the Acute Pods in five Lodges, totaling 12 bathrooms and over 50 doors. A prototype bathroom has been approved by Hospital Risk Management staff and funding has been identified to complete the work.

Continued risk to patient safety and loss of accreditation.

Operating Budget Impact	Fund Group	Recurs	Amount
Other Expenses	General Funds - Existing	>5 Years	(100,000)
			(100,000)

Description

The project is to renovate the existing laundry facilities at Crafts Farrow State Hospital and Tucker Center. Both facilities are located in Columbia. The Crafts Farrow facility serves Bryan Psychiatric Hospital, Hall Adolescent Psychiatric Hospital and Morris Village Treatment Center. The Tucker Center facility serves Roddey Nursing Home and Stone Veterans Nursing Home. Both facilities will serve as the backup should one have a problem. The total estimated project cost is \$3.3M.

Currently the facilities mentioned above are served by an outside laundry service. The cost for the outside laundry service has gotten very expensive, this project will reduce operating costs. Renovating the space and new equipment should provide reliable service and less expensive operating cost than an outside service.

The alternative will be to continue to contract laundry service with an outside vendor. The majority of laundry is presently being contracted to an outside service, but it is proving to be more expensive than doing in-house.

Description

The Waccamaw Area Center for Mental Health is located in Conway, SC and is approximately 34000 square feet in size. The building is conditioned by 25 split system heat pumps, 4 ceiling exhaust fans and one in line smoke removal fan all installed in 1993. The mechanical equipment outlived its lifespan and is now becoming more and more costly to maintain

This project is to replace the 25 HVAC units, HVAC Controls, Sprinkler, Fire Alarm and Roof. This work will include Replacing the outside air and return dampers, all the ductwork, refrigerant lines, AHU's and condensers, remove/replace the existing damaged drywall ceilings with new lay-in ceilings and replace the HVAC controls. Some carpet replacement will also be a part of this project for safety reasons. The roof is original to the building and is over 24 years old and needs to be replaced. The sprinkler system has several leaks in the system and needs to be replaced

The alternative is to continue to work in inefficient/costly facilities and leases and make the necessary deferred maintenance repairs.

Description

Construct a 35,000 SF facility on five acres of land currently owned by Anderson County. This request is related to the Department's goal to provide sufficient mental health services in communities to minimize consumers' needs for hospitalization to the greatest extent possible. Anderson County council has voted and approved the donation of the five acres in a prime county business park location. The current estimated value of the property is \$600,000. The building will include space for Adult Outpatient Services; Child, Adolescent and Family Services; and Administration, Training and Facility Support. This facility will consolidate programs housed in leased facilities in the Anderson area and reduce lease costs by \$135,000/year. Placing the various programs in one consolidated facility will aid in efficiency of service delivery.

The current facility is located on leased county land, constructed in the 60s and is 17,800 SF. The current lease will expire in 2016. It is overcrowded and needs a variety of deferred maintenance work. The new facility would allow for a more seamless transition between various programs, as well as provide more security & safety and reduce lease costs

The alternative is to continue to work in inefficient/costly facilities and leases and make the necessary deferred maintenance repairs.

Description

This project is to construct a 25,000 square foot facility on land currently owned by the Department. Columbia Area Mental Health Center's Child & Adolescent (CAF) Program has outgrown its current space in the Phase I Building. The new facility will accommodate the CAF Services Program AND the Assessment Resource Center (Now known as the Metropolitan Children and Advocacy Center – Met CAC) and several associated support services. Placing these child-based programs in the same facility will aid in efficiency of service delivery and increase access to care. The building would also enable Columbia Area MHC to relocate programs from temporary leased locations and consolidate those programs on one campus.

The Comprehensive Child and Family Behavioral Health Complex would co-locate the Met CAC and CAF services providing a centralized, integrated system of care to provide services to children and their families. Co-location would increase access to crisis intervention services, psychiatric services, and facilitate collaboration between programs, particularly between the Met CAC and our Child Welfare Program that deals with our DSS children. The completion of this project will allow us to relocate our Adult Clinic Services (ACS) to the centralized campus in the Phase I space occupied by CAF Services. ACS is currently leasing temporary space from Richland County.

The alternative is to continue to lease properties to house the Assessment Resource Center and Adult Clinic Services Programs.

Description

This project is to address deferred maintenance issues at the Campbell State Veterans Nursing Home in Anderson. The work includes renovations to the kitchen to include replacement of the walk in freezer/refrigerator and serving line equipment; renovations to five group showers to provide more patient privacy; replacing patient room flooring finishes on Unit 5; and re-configuration of resident bathrooms to allow access for patient lifts. Replacement of the emergency power generator. The existing does not have the capacity to support the HVAC chiller system and/or our electric kitchen appliances, which poses a safety concern to residents during an extended outage.

The project is needed for enhanced security and to ensure the kitchen facility is capable of providing the necessary meals for the 220 veterans. The work will enable the residents to have a more comfortable home and provide amenities that will make living and dining better.

Continue to address the most critical maintenance issues and reacting to emergencies as they arise.

Description

The project is to replace the floor tile in the Roddey Nursing Home. The facility is located on the SC DMH owned Tucker Center Complex in downtown Columbia. The total estimated project cost is \$1M.

Roddey Nursing Home flooring is worn and needs replacement and has been documented as an environment of care issue by DHEC during recent inspections. This will provide a more aesthetically pleasing facility for the patients to live in.

Roddey tile is worn and needs replacement. There are no alternatives to replacing the existing flooring.

Description

This project is to demolish buildings 2, 7, 15 & 18 located on the DMH Crafts Farrow State Hospital Campus in Columbia. The buildings are all vacant, were built between 1926 and 1951 and range from 6,000 to 40,000 square foot in size. The total square footage of all five buildings are 111,770 square feet.

All of the buildings are red brick buildings with single pane windows and little or no insulation. Currently all of the buildings are vacant and there are no plans to reoccupy them. All forms of maintenance to the buildings has stopped and some areas of the buildings are exposed to the elements increasing their rate of disrepair. The buildings are no longer safe to occupy and need to be demolished because of their condition.

The cost to bring the buildings up to current code so that DMH can reoccupy the buildings is simply too great and it would be cheaper to demolish and rebuild them if required.

Description

Nursing stations in Cottage #1, #3 & #6 are too small, need to be fully enclosed with a door and service window installed and extended to ceiling height to alleviate privacy concerns.

The Morris Village campus was built in 1975 and there have only been minor renovations and repairs since construction. SC DHEC regulations require that each cottage contain an enclosed nursing station for the safety of patients and staff. An enclosed nursing station will provide a secure area for medication storage to enhance patient safety. It will also provide a safe shelter for nursing staff in case there are issues with a patient.

There are no alternatives.

Description

The project is to construct a state-of-the-art, 104-bed veterans' nursing home facility, proposed on the Crafts Farrow campus of the Department of Mental Health in Columbia, South Carolina. The plan for the project is based upon the "resident center care" model, as prescribed in the Department of Veterans Affairs' (VA) Community Living Center Design Guide 2011.

The project involves the construction of three single story structures, connected by common areas (core/hubs), and a utility building with a combined total of approximately 150,000 gross square feet. A total of 108 residents will be distributed among eight homes. Each home will have a kitchen, dining area, private dining room, living room with fireplace, den, bathing suite, personal laundry, and sitting area near the front door. Each home has been designed to accommodate 13 resident bedrooms with private bathrooms, including at least one special care/bariatric bedroom.

In accordance with recommendations by the Department and the Joint Bond Review Committee, the State Fiscal Accountability Authority approved the deferral of the Central Region project on March 21, 2019. The Department would expect to re-apply for the deferred project by April 15, 2020, with state matching funding required to be in place no later than August 1, 2020 for consideration by the U.S. Department of Veteran's Affairs for construction grant funding in 2021.

Description

This project is to replace the roofs and HVAC systems for six buildings located on the Bryan Psychiatric Hospital Campus in northeast Columbia.

The existing roofs and HVAC systems are over 40 years old and past their useful life. The other buildings on the Bryan Campus had their roofs and HVAC systems replaced in the last 10 years due to their original construction containing fire resistant treated wood. The six buildings needing roof and HVAC systems replaced are:

- TCA 1.....Canteen/Post Office
- TCA 3.....Arts & Crafts
- TCA 6.....Dining/Cafeteria/Hall
- TCA 7.....Pharmacy Annex
- TCA 11.....Pharmacy
- TCA 15.....Hall Therapy

There have been roof leaks in some of these buildings. HVAC systems are worn out, replacement parts are no longer available and upgrading of existing systems is not an alternative.

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

This project is for Lodges A, B, E, F and G at Bryan Psychiatric Hospital located in Columbia. The project is to include water isolation valves, floor tile replacement and the atrium storefront window replacement. The Lodges are identical single story brick structure on a concrete slab foundation. The lodges are approximately 12,770 square feet each, were constructed in the mid 1970's and are used as a patient dormitory.

Currently there are individual shutoffs for each lodge affecting 30+ rest rooms and kitchenettes per Lodge. This project will install additional shutoff valves to the 3 Pods located in each lodge so that any plumbing upgrade/repair does not affect the entire building and disrupting all of the Lodge occupants at one time. The floor tile is original to the building and is beginning to show its age and needs to be replaced for safety reasons as well as aesthetic reasons. The storefront windows look out into an atrium in the center of each lodge. They are single pane plate glass, are not impact resistant and are not safe for the type of occupants that reside in each lodge. This project would replace the storefront windows with impact resistant safety glass so that the residents cannot damage the glass or harm themselves. The panes would also be insulated glass providing some energy efficiency.

Description

Bryan Psychiatric Hospital and Morris Village campuses have many sidewalks in poor condition and are in need of repair. Many sections of the campus sidewalks are cracked or are uneven. These sidewalks accommodate individuals who are handicapped or wheelchair bound. Not all of the sidewalks are covered at Bryan and none for the sidewalks are covered at Morris Village. Covering the sidewalks would help protect patients, staff and visitors from inclement weather as they walk between patient buildings.

Description

Purpose of project is to renovate the interior of the SC DMH Main Administrative Building located on Bull St. in downtown Columbia. Building was built in 1968 and contains 81,053 square feet. Building contains a majority of the original ceiling tile, light fixtures, and flooring from the original construction.

Construction is reinforced cast-in-place concrete. The building HVAC systems and the roof were replaced in the last five years. Majority of the interior is original 1968 construction. Scope of the project is to replace the flooring, ceiling tile and grid, lighting and plumbing. Current flooring is worn down to the concrete in several locations. Lighting is obsolete and need replacing with either T5 or LED fixtures. Plumbing has gone past it useful life of 40 years. Current ceiling grid system is interlocking and hasn't been manufactured in several years. Replacement ceiling tiles or track is no longer available. Project will require relocation of personnel into available unused spaces as the work progresses.

Construction of new facility which would cost approximately \$25.0 million.

Description

This project is to replace three modular buildings used as office space on the Morris Village campus in Columbia SC. One building is 2240 square feet and was built in 1987. The other two buildings are 1290 square feet and were built in 1979.

All three buildings have exceeded their useful service life and require replacement. The buildings require extensive ongoing maintenance and no longer fit the needs of the occupants.

Leasing space in other locations would not be practical for staff due to the need for proximity to their clients.

			1,485,000

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

Purpose of project is to construct 6,000 square feet central Pharmacy building for supplying medications to five SC DMH Department of Inpatient Services facilities located in the Columbia area. The facility will be located on the Bryan Psychiatric Hospital Campus in northeast Columbia. There are two areas currently being used for supplying medications located in existing buildings on the Bryan campus and the central Pharmacy will replace those.

Medications are being supplied daily to approximately 900 patients housed in five facilities. These consist of William S. Hall Psychiatric Institute, G Werber Bryan Psychiatric Hospital, Morris Village Alcohol and Drug Addiction Treatment Center, SC DMH DIS Infirmary, Sexually Violent Predator Treatment Program at Department of Corrections on Broad River Road and GEO Care located on Farrow Rd in northeast Columbia. Space of current facilities is inadequate, has poor lighting and is extremely noisy. These factors create a negative impact on preparation of medication for patients as well as administration of medication to patients.

Existing pharmacies require licensing of multiple sites/work areas and are not conducive to organizing for efficient staff supervision and orderly work processing. A new centralized pharmacy would allow for the organization of the pharmacy into four sections. Each section would have a pharmacist supervisor reducing the span of supervision that now exists. The commingling of employees performing their work tasks would be significantly reduced.

Construction of a 6,000 square feet central Pharmacy will reduce operating costs, provide a more efficient means of getting medication to patients and lessen the opportunities for errors that endanger the safety of patients.

Description

This project is to replace the roof that is over 20 years old at the Crafts Farrow State Hospital Campus Building 29 in Columbia. Building 29 was constructed in 1960. It is a brick single story 50,570 square foot facility that houses DMH's central Nutritional Services, Vehicle Fleet Services and Print Shop/Document Management Services.

The roof is a flat modified bitumen roof which is over 20 years old and is out of warranty with multiple leaks a year. Replacing the roof with a newer one will ensure a water tight surface for the next 20+ years and should provide some energy and maintenance cost savings.

Continue making repairs as leaks occur.

Description

This project would consist of constructing a new mental health clinic facility to be located in Abbeville County. It will replace the current 6,250 square foot leased facility. This new construction would be 6,000 square feet and will also require acquisition of land.

The Center has leased office space in Abbeville County for the last 29 years. The current leased facility no longer meets the needs of the office. The building is older and is not as efficient to operate now. We have searched for other property to lease but have not found other suitable property. It will be more cost effective and efficient for the state to purchase property and construct a new building suitable to our needs and designed for growth and change.

We have tried to find alternative, suitable locations to rent or to find a developer willing to construct and lease back with no success.

			3,245,000

Operating Budget Impact	Fund Group	Recurs	Amount
Rent	General Funds - Existing	>5 Years	(25,000)
			(25,000)

Description

Add a 7700 square foot 2nd floor addition to the Children's (500) wing, including offices, treatment rooms, stairwells, elevator and HVAC system upgrades. When the building was completed in the West Ashley area of Charleston in 2009, the project was master planned to accommodate the addition of a 2nd floor. A heavier concrete footing system and a 2nd floor slab were constructed, and a space reservation was included for an elevator tower. The spaces will be used as an administrative area for senior management, Billing and Finance, Human Resources, QA/QI, Performance Improvement, and other appropriate administrative functions.

During the down-sizing that occurred in past years administration was able to occupy unused clinical areas. However, as patient workload has increased over time these areas being utilized by admin are now needed for clinical services. This has led to overcrowding and makes it difficult to find private space to see a client that meets HIPAA requirements. CDMHC currently leases space to house the Budget, Finance and Billing functions at a cost exceeding \$25,000 annually. The Center continues to grow which will force other administrative functions to move to leased facilities in order to provide adequate space to comfortably serve clients and their families in the professional, customer friendly environment they deserve. This will result in increased future leasing costs.

Leasing outside space as we had to do in past years.

New Construction	300,000	Unassigned	
	300,000	State Funds - Appropriations	300,000
			300,000

Operating Budget Impact	Fund Group	Recurs	Amount

Description

This project would include two covered activity shelters measuring 20' x 40' to be constructed of steel with a concrete floor to match the existing facility within the fenced patient courtyards. Each courtyard is shared by two Lodges (G/H and J/K). The shelters would include accessible bathroom facilities and provide storage space for outdoor equipment.

These structures will provide cover and serve as an Activity Center for the patients throughout the year during outside activities. The shelters are much needed to provide a safe, aesthetic and therapeutic environment for patients. Group therapy as well as individual therapy may also be held here. Due to the medications that our patients are required to take, they require shade when outside. Our patients also require quick access to restroom facilities for sanitary purposes. Outdoor therapy is an important tool for our patient's recovery process. As part of our therapeutic environment, our patients are provided access to secure outside spaces adjacent their lodges. Currently, these spaces are basically small grass fields, with temporary tarp shelters which we erected for shading. Bathroom accessibility is difficult because these outside spaces are only accessible via a series of secured doorways; which requires a patient to travel back to his/her assigned bedroom suite in order to access the nearest bathroom.

Continue to provide temporary measures to minimize patient risks.

			(97,100)

Description

Lexington MHC Adult Clinic, Child and Adolescent Family Services (CAF) and Emergency Services Construction. This project consists of acquiring a 10-acre lot so that LCCMHC can construct a building to support our Adult, CAF and Emergency Services programs, which will enhance the overall therapeutic environment for our clients. Total space requirement equals 40,000 SQ FT, to be built in three phases. This space will provide 8,000 SQ FT for Administration staff, 8,000 SQ FT for Psychosocial Rehabilitation Service Programs, 12,000 SQ FT for CAF and the remainder will accommodate our Adult Services and Emergency Services Clinic.

This project will be very instrumental in enhancing the quality of Behavioral Health Care for our clients. Significant improvements can be made to our quality of care by collocating Adult Services, CAF, Emergency Services and the Medication Clinic. There will be a more cohesive and professional environment in providing continuity of care, which encompasses crisis intervention, therapeutic care and required medication. It will provide a therapeutic environment that allows all the clinical staff to work together under one roof in providing continuity of care for all of the CAF programs (School Based, DJJ, DSS, MST, FP, Special Needs and Clinic). Colocating administrative staff with the majority of the LCCMHC clinics will allow greatly facilitate controlling, communicating, synchronizing and coordinating all clinical and administrative aspects of leading the Center in the accomplishment of its mission, which is to be the provider of choice for behavioral health and recovery services for the residents of Lexington County.

The alternatives considered are to continue to lease space as required with the associated inefficiency in the delivery of services.

			1,200,000

Operating Budget Impact	Fund Group	Recurs	Amount
Rent	General Funds - Existing	>5 Years	(6,912)
			(6,912)

Description

Project is to construct a 6,300 square feet storage facility for the Tucker Center Complex downtown Columbia. The facility is currently using several large conex type containers to store items used in the Nursing Homes.

Tucker Center (comprised of Roddey and Stone Nursing Homes) is currently renting twelve large conex storage containers (shipping containers) for storing required patient treatment supplies used in both facilities. Twelve conex containers provide 4000 square feet of storage space. Containers are placed in several locations around the campus and require employees to walk to the containers to retrieve supplies. Conex containers are not conditioned. New central storage building will provide 6300 square feet of space and the means for supplies to be organized, tracked and maintained. Inventory could be reduced to lower levels thus reducing inventory carrying cost. It would also provide a method to ensure that critical items used for patient care are stocked and controlled. Tucker Center is currently paying \$400.00 monthly rental for each conex. This equates to \$6,912.00 per year. Rental fees will be eliminated with the construction of the new central storage building.

Rent storage facility in the Columbia area. The cost would be more than the conex storage containers and also require trucks hauling supplies back and forth. Continue renting the conex containers which is inefficient due to being located in several locations on the Tucker property.

--------------------------------	-------------------	---------------	---------------

Description

Purpose of project is to resolve storm water drainage problem at the Bryan Psychiatric Hospital located in northeast Columbia. There are three drainage outfalls on the Bryan Campus that drain storm water into the lake adjacent to the property. Outfalls are constructed of reinforced concrete pipe that has seperated at joints, blocked by tree roots and been damaged in several places.

Drainage piping is original to construction and over 40 years old. Resolving the drainage issues will require a partial replacement of the concrete pipes, joint separations will need to be dug up and corrected and any blockages removed. Adjustments to the slope of the outfall may require modifications due to silt in the lake and current lake level.

There are no alternatives.

Description

Purpose of project is to make repairs and repave as necessary existing roads and parking lots at Morris Village, Bryan Psychiatric and Crafts Farrow Campuses. Parking lots and roads at Morris Village and Bryan are original to construction and over 40 years old. Roads on the Crafts Farrow Campus are over 75 years old.

Existing roads and parking lots at Morris Village, Bryan Psychiatric and Crafts Farrow Campuses are severely worn and need repair/repaving. Parking lots and roads are original to construction and 40 to 75 years old. Many pot holes have been patched over the years, but the patches do not hold up to traffic. Project also includes the paving of road behind Bryan Psychiatric Hospital that is currently dirt and has heavy traffic. The road is at the lowest elevation of the Bryan Campus and storm water draining from around the Bryan building continually washes out the existing dirt road. Paving with necessary drainage is needed to correct the issue.

There are no alternatives.

			1,800,000

Operating Budget Impact	Fund Group	Recurs	Amount

Description

This project would consist of constructing a 4,000 square foot addition to the existing clinic and replacing the roof on the entire structure.

At the current rate of growth, the Camden Clinic in Kershaw County may soon serve more patients than does the Sumter Main clinic that has historically been the largest in the four county catchment area. The Center also leases a small amount of existing space in the clinic to the local FQHC to promote the integrated health initiative. Additional space would allow for growth of existing programs as well as an expansion of the array of services offered. The need has already been established in Kershaw County for such programs as Supported Employment, ACT team and Elder Services. However, there is currently no unused space. Roof defects stemming from original construction result in significant leaks inside the facility during severe weather.

Leasing additional space and continuing to make repairs on a periodic basis.

Description

This project would consist of acquiring land for and constructing a new 12,000 square foot mental health clinic facility to be centrally located in Cherokee County to better serve residents. It will replace the existing 10,226 square foot leased facility located in Gaffney.

The current site was built in the mid-1960's for another purpose and does not allow for the appropriate delivery of mental health services to the community. The building has housed the Cherokee Mental Health Center program in its entirety since 1985, providing crisis services, outpatient therapy, psychiatric medication assessment, nursing services, school-based therapy and pharmacy consultation services to the populations of adults, adolescents, children and families. The building is old and has maintenance issues the owner has problems resolving, with annual leasing costs exceeding \$64,000. It will be more cost effective and efficient for the state to purchase property and construct a new building suitable to our needs, which is designed for growth and change.

Several clinicians have been remotely based to provide services in schools and other community agencies. The Center has tried to find alternative, suitable locations to rent or to find a developer willing to construct and lease back without success.

Description

Project is to renovate Building 17 located on the Crafts Farrow Campus. Building currently houses the SC DMH Public Safety Department and patient records. The original building was built in 1946 and other sections added in the 1950's and 1970's.

There have been no significant renovations since the early 1970's with the exception of the roof which was replaced in 2015, and installation of a new boiler and chiller within the last two years. Building assessment was completed in 2015 by McCreary Snow Architecture and several significant issues were noted in the assessment report. The exterior building envelope has significant issues which is allowing moisture intrusion and causing damage to the interior. Windows will need to be replaced to eliminate moisture intrusion and reduce energy cost. Exterior masonry will need to be repointed. Major findings besides the exterior envelope issues include deteriorated plumbing, asbestos and lead containing materials and inferior electrical systems. Exterior masonry will need to be repointed. Exterior and interior renovations are required to stop further damage to the building and provide a comfortable working environment for Public Safety employees.

Demolition of existing building and construction of new was considered. Total cost of demolition of existing and construction of new is \$2.55 million. Cost of renovating existing is \$1.68 million.

Description

Purpose of the project is to renovate Building 6 located on the Crafts Farrow Campus. Building currently houses the SC DMH Forensics and SVP Departments. Original building was built in 1927 and has received only minor renovations and repairs since construction. Building 6 contains 18,630 square feet.

There have only been minor renovations and repairs since construction. The exterior building envelope has significant issues which is allowing moisture intrusion and causing damage to the interior. Major problems besides the exterior envelope include antiquated HVAC systems, deteriorated plumbing, asbestos and lead containing materials, deteriorated roof and inferior electrical systems. Exterior and interior renovations are required to stop further damage to the building and provide a comfortable working environment for SC DMH employees.

Demolition of existing building and construction of new was considered. Total cost of demolition of existing and construction of new is \$3.86 million which includes a 10% contingency. Cost of renovating existing is \$2.56 million.

Rent	General Funds - Existing	> 5 Years	(82,800)
			(82,800)

Description

This project is for new construction of a freestanding 6,000 square foot with 25 private offices, 2 group rooms, 1 conference room, and minimum of 40 parking spaces. This building will serve the Mental Health Community in North Augusta, SC.

North Augusta, SC is one of the fastest growing areas in South Carolina. The current satellite office (Hartzog Center) is approx. 2,800 square foot and can no longer house the needed clinicians for services. Aiken-Barnwell is expanding its school-based services and other community based programs in FY20, with that we can expect to see additional growth in our patient population. With growth in every way but our geographic foot print we will reach a breaking point within the next fiscal year. We are currently seeking a larger facility to rent, but this will require renovation and additional funds spent on a recurring basis in the form additional rent; the state will have no sustained investment in the property.

The alternative is to rent or lease a facility. Rental prices in North Augusta are rising quickly with the growth and we can expect the market to continue to grow. Additionally, it is known that within the North Augusta area multiple SC agencies such as DSS, Highway Patrol, and DHEC all rent spaces. The concept of increasing the physical structure size of the North Augusta Mental Health Center and co-locating all these agencies within one building.

Description

This project would consist of constructing a new 10,000 square foot mental health clinic facility to be located in Pickens County.

This proposed construction will replace the current office space at 337 West Main St. Easley, SC 29640. Currently, AOP is renting a former Office Supply company building. A new building would have a better layout and parking. This would result in consolidated program services and convenience to patients and families. Without the construction of a new facility, the current Pickens Clinic will continue to be leased at a cost of over \$100,000 per year.

Continue to operate in leased space.

			(36,000)

Description

This project is to purchase land and build a new facility for our Hartzog clinic currently being leased in North Augusta, SC (Aiken County).

The current building has 3700 sq ft. ABMHC needs to construct a building that can support our CAF, Adult and Emergency Services programs as well as our administrative staff. ABMHC also needs a facility that can provide adequate parking for its clients and staff. The total space requirement is 8,000 sq ft. This project would provide a facility that enhances the quality of Behavioral Health Care for our clients. This project will offer significant improvements to our quality of care, increase our capacity to serve more clients in the community, provide more space to serve clients and enhance continuity of care, which encompasses crisis intervention and therapeutic care. The current lease for the 3,700 sq ft building is \$36,000 annually. ABMHC would like to provide adequate space for clients without renting. This project will allow future rental dollars to be used to enhance or expand programs.

Continue leasing space as required.

Description

Replace flooring in Lodges G, H, J and K and improve acoustical dampening.

The majority of the floors in the facility are from original construction in 1984. Due to the wear over the years, most of the floors are in need of replacement. The areas with the most critical need would be patient areas and nursing stations, hallways due to the high traffic volume and other common areas such as group rooms. Due to high sound levels, new wall treatments are required for the walls and ceiling in the Lodge and nursing station areas.

Continue to defer replacement.

-------------------------	------------	--------	--------

Description

Renovation and expansion of the Admissions/Discharges Department and the adjacent Public Safety Department.

The existing space is less than 1500 square feet. This project would double the size of the space and reconfigure it for better use. Changes will improve patient processing and ensure sufficient and appropriate patient holding rooms and protective services for patients, visitors and staff, as well as improve the ability to maintain privacy of patient information as required by HIPAA. Changes include creating individualized work stations in addition to four examinations rooms, three holding rooms, a Director's and Physician's Screening office, and other office and storage area. Improvements to the Public Safety area would include interior renovations to enhance security, installation of additional cameras and lighting, and refurbishment of a locker room designed specifically for Law Enforcement personnel and equipment.

Continue to operate with existing concerns.

			(75,912)

Description

This project consists of acquiring a 5-acre lot so that LCCMHC can construct a building that can support the Brook Pine Community Residential Care Facility and Gaston Clinic operations. A larger facility will significantly enhance the overall therapeutic environment for the CRCF and clinic.

The space requirement for each operation is 6,000 SQ FT, but both can be constructed on the same 5-acre lot. This project would provide the Gaston Clinic with an enhanced Behavioral Health Care environment that is conducive to optimizing the quality of care to the growing number of clients in Gaston and surrounding areas. Collocating the CRCF with the Gaston Clinic will not only contribute to the quality of care for the CRCF residents, but it will also contribute to the efficient management and synchronization of clinical and administrative resources.

Alternative is to continue leasing space.

			2,000,000

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

This project would consist of constructing a 5,000 sq ft. addition to the existing structure to house expanded programs and additional clinic offices. Also this request is to replace the HVAC system in the current structure.

The initial plan for this building included the addition of an additional wing during a second phase of construction. More space is desperately needed to accommodate the growth in the population served in this rural area. The additional space would be used to house additional staff and programs. In addition, the HVAC system continues to be a problem and would likely need to be replaced or upgraded, especially if the building square footage is increased.

Leasing another building; however this would create transportation problems. The Center has tried to find alternative, suitable locations to rent or to find a developer willing to construct and lease back without success.

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

This project would consist of constructing a new 8,000 square foot mental health clinic facility to be centrally located in Lee County to better serve residents. It will replace the 4,613 square foot leased facility located in Bishopville. This new building would house outpatient adult/CAF and medical services programs.

The Center has leased several buildings in the past, and currently occupies a county building where the lease of \$17,000 per year is presently suspended by the Lee County Council. The building is less than desirable and in need of significant repairs. The current facility limits the scope of services offered. A new building would give staff an opportunity to have more than one group at a time, allow for a more functional waiting and reception area, and house additional staff members to possibly accommodate offering new programs.

Several clinicians have been remotely based to provide services in schools and other community agencies. The Center has tried to find alternative, suitable locations to rent or to find a developer willing to construct and lease back without success.

Description

Description: In FY18, DMV applied for and was awarded funding in the 2018 Commercial Driver's License Program Implementation (CDLPI) Grant. DMV was awarded \$150,650.01 in Federal Funds to reburish one (1) CDL Skills Test Course, and to restripe five (5) other CDL Skills Test Courses. This grant is a 95% Federal / 5% DMV match. Any funds needed for overage fees such as change orders etc. will be funded with DMV funds.

Justification: DMV currently provides CDL Tests at nine (9) Field Offices in South Carolina. The following Field Offices provide CDL testing: Bennettsville, Greenville (Saluda Dam), Greenwood, Ladson, Myrtle Beach Common, North Augusta, Rock Hill, Shop Road and Sumter. DMV has one (1) training location located in Blythewood. This location is utilized to train DMV trainers/examiners as well as school instructors, on the latest Federal CDL laws. Approximately 8,000 South Carolinians attempt the CDL exam with 6,000 people passing the CDL exam every year.

Description

Description: SCDMV Field Offices were damaged by major hurricanes last year. The Insurance Reserve Fund issued a payment \$131,946.46 (CLAIM #C2278) to SCDMV for miscellaneous damages sustained during the storms.

Justification: The following DMV locations will be receiving miscellaneous repairs due to hurricane damage:

- Conway \$111,623.88
- Lake City \$14,199.26
- Kingstree \$1,754.49
- Myrtle Beach - Market Common \$4,368.83

If necessary DMV will cover any additional expenses.

Description

Description: Purchase and install Hurricane Shutters on the exterior of eight (8) DMV Field Offices. These shutters will protect the doors and windows of our facilities.

Justification: DMV applied for grant funding to help assist with the costs of this project. This grant is a 75% Federal share (\$138,090.75) and 25% DMV share grant (\$46,030.25). The shutters will be an asset to our Field Offices by providing protection against strong storm winds. These shutters will also allow the DMV to re-open in a timely fashion after a storm hits to provide identification cards for citizens who may have lost theirs in the storm. The seven counties in which these 8 buildings are located in have approximately 1,076,341 licensed drivers and approximately 1,072,540 registered vehicles.

Description

Description: This project was established to fund statewide DMV Field Office HVAC replacements and repairs and to implement Energy Management Systems

Justification: There are 67 DMV Field Offices throughout South Carolina. Our Field Offices are out of date and poorly represent our Agency due to having such an aged appearance. Repairs made using this project will help protect and maintain these State buildings in a good and safe working condition for both the employees and the public. During FY20, DMV will request to transfer DMV carryforward funds of approximately \$220,000 to this Project. The current balance of the project is \$4,836.24, adding carryforward funds to bring the total of DMV Statewide HVAC Replacement Project back to approximately \$224,836. Replacing these outdated HVAC systems will reduce energy and costs for the future.

Description

Description: The recommended lifespan of an asphalt roof (shingles) is 15-20 years. The average age of a DMV Field Office is 38 years old. DMV has made multiple repairs to our roofs over the past few years.

The following field office roofs are in extremely poor and damaged conditions: (\$60,000 Charleston - Leeds Ave, \$48,000 Kingtree, \$47,000 Lake City, and \$43,000 Newberry)

Justification: DMV is requesting to move carryforward funds to create this project to replace the worn out asphalt shingle roofs with metal roofing. Although the cost of metal roofing is initially higher, metal roofs provide approximately 40 additional years to the lifespan of the roof (the average lifespan of metal roofing is 60+ years). Metal roofing provides protection - sealing out water, surviving high winds, and is resistant to fire, mildew, insects and rot. Metal roofing will also assist with the DMV's goal of being Green and reducing energy costs.

Description

Description: The recommended lifespan of a commercial vinyl tile is approximately 25 years. The average age of a DMV Field Office is 38 years old. Due to age plus increase in customer flow our floors in several Field Offices desperately need repairs and or replacement.

Justification: DMV is requesting to move existing carryforward funds into a Statewide Flooring Project. This Project will benefit DMV Field Offices throughout the State by replacing worn out and dilapidated flooring with new ADA complaint floor products. The replacement of these floors will also reduce liability on the State for slip and fall related accidents.

Description

Description: ADA Compliance Project #9607 was established to provide ADA access to DMV Field Offices by upgrading parking lots, sidewalks, doorways, and restrooms for employee/public usage. Late FY18/Early FY19 the DMV solicited 4 Field Offices (Barnwell, Edgefield, McCormick, Saluda) in groups of 2 for ADA Bathroom Renovations. Due to several locations having asbestos and the costs of the abatements and renting of portable restrooms, these 4 projects were cancelled. The DMV has developed a solution to re-solicit the 4 projects as solo projects. Justification: The DMV currently has 67 Field Offices throughout South Carolina. The DMV will be completing various ADA projects throughout the next few fiscal years to ensure that our facilities meet all established ADA laws and codes. DMV has begun the process to re-solicit the Barnwell ADA Bathroom Renovation Project, which will be completed in FY20. The Barnwell Field Office did not test positive for any materials containing asbestos. The Barnwell Field Office totals 1,196 square feet and was constructed in 1978. This renovation will consist of upgrading the bathroom fixtures (toilets, sinks, mirrors, soap dispensers, toilet paper holders, grab bars) to ADA compliant fixtures. Lighting will be replaced with energy saving LED lighting, flooring will be replaced, as well as the walls painted.

Description

Description: DMV requests to start this project to repair dangerous parking and testing areas throughout the State, to ensure that our employees and citizens of South Carolina can safely access our 67 Field Offices.

Justification: The DMV services all citizens of South Carolina by providing identification cards, driver's licenses, motorcycle and CDL licenses as well as numerous other transactions. Due to the rapid increase of South Carolina's population, storm damage and the overall age of parking and testing areas, the asphalt pavement and concrete curbing has severely decayed. Parking lots are ridden with "pot holes," parallel testing areas provide "cheat" spots where inexperienced drivers, know where to turn their wheels due to the large ruts in the asphalt. The repairs to our parking lots would provide safe access to our Field Offices and deter the opportunity for "cheating" on road tests.

Description

Description: Provide minor in-house renovations to the Laurens Field Office.

Justification: The Laurens Field Office was constructed in 1965, making it the oldest DMV facility in South Carolina. It is unknown if the Laurens Field Office contains asbestos. The Laurens Field Office totals 2,685 square feet. This minor renovation will consist of painting, replacing outdated lighting with energy saving LED lighting, replacing worn out flooring, as well as updating the counters with new cubicle furniture. The total cost for this project is approximately \$180,000.

Description

Description: The Spartanburg Fairforest DMV field office is 5,105 square feet and was constructed in 1975. This field office is shared with the South Carolina Department of Public Safety. The DMV side of this facility desperately needs to be re-configured to fit the growing needs of the Spartanburg area.

Justification: Due to the growing population in the Spartanburg area and the dated inefficient layout of this location, the DMV wishes to renovate this facility. Renovations to this site would greatly assist with better customer traffic flow inside the facility and offer additional counters to keep wait times at a minimum. This project will also allow for LED upgraded lighting, and energy management tools, to lower energy costs. This project will require an architect, engineer, third party inspector, and a licensed contractor to provide materials and labor in this renovation. This project will also require temporarily closing this facility and leasing another location while renovations are completed. We have had quotes for the A/E services of this project quoted for approximately \$45,000. The other professional services needed \$15,000 will cover inspection services and fees.

Description

Description: To provide interior renovations to the DMV Fountain Inn Field Office to better serve the growing counties of Greenville and Laurens. The Fountain Inn DMV was constructed in 1990 and is 2,303 square feet.

Justification: The Fountain Inn DMV Office is located between the Greenville and Laurens county areas. The Greenville population has seen an enormous growth over the past few years. Since this Field Office serves two counties, it will continue to see an astronomical amount of customers through the next few years. Due to the growing population in the Greenville/Laurens area and the dated inefficient layout of this location, the DMV wishes to renovate this facility. Renovations to this site would greatly assist with better customer traffic flow inside the facility and offer additional counters to keep wait times at a minimum. This project will also allow for LED upgraded lighting, and energy management tools, to lower energy costs. This project will require an architect, engineer, third party inspector, and a licensed contractor to provide materials and labor in this renovation. This project will also require temporarily closing this facility and leasing another location while renovations are completed. A/E Services were quoted at approximately \$45,000. The remaining \$15,000 will cover inspection service fees. Construction prices are based off of other DMV Projects and relocation costs.

Description

Description: The DMV Myrtle Beach Market Common Field Office was constructed in 1984 and is 3,187 square feet. In order to meet the growing population needs of Horry County, this Field Office opened for full service in October 2018.

Justification: This office will need both interior and exterior renovations. The current layout and counter arrangement does not flow and is confusing to customers. The area where driver's license pictures are taken, is a walk-through to the Real ID stations. This renovation will create a better traffic flow for customers to easily access the counters, while keeping customer waiting times low. This project will also allow for LED upgraded lighting and energy management tools, to lower energy costs. This project will require an architect, engineer, third party inspector, and a licensed contractor to provide materials and labor in this renovation. Since opening for full service in October 2018, customers and employees must park in a grass field for overflow parking. The exterior renovation will consist of removing a sidewalk and creating a paved parking area for employees and customers to safely access our facility. A/E Services were quoted at approximately \$30,000. The remaining \$10,000 will cover inspection service fees. Construction prices are based off of other DMV Projects and relocation costs.

Description

Description: The St. Matthews DMV Field Office is 2,303 square feet and was constructed in 1970. Due to growing population trends in this area, this facility is no longer practical in its current state.

Justification: The layout constructed in 1970 is not compatible with today's privacy laws, DMV security policies, and ADA Code/Laws, due to the restrooms being behind the counter. The DMV wishes to renovate this facility due to the above mentioned safety and security issues. Renovations to this site would greatly assist with better customer traffic flow inside the facility and offer additional counters to keep wait times at a minimum. This project will also allow for LED upgraded lighting, and energy management tools, to lower energy costs. This project will require an architect, engineer, third party inspector, and a licensed contractor to provide materials and labor in this renovation. It is unknown if this facility contains any asbestos materials. This project will also require temporarily closing this facility and leasing another location while renovations are completed. A/E Services were quoted at approximately \$25,000. The remaining \$5,000 will cover inspection service fees. Construction prices are based off of other DMV Projects and relocation costs.

Description

Replace the 22 year old decking boards and construct an ADA compliant ramp with associated parking and walkways to access the structure at the Michael D. McKenzie Field Station located in Green Pond, SC. The building is 4,100 square feet and is elevated due to its close proximity to Mosquito Creek. The building is the gateway to the natural environment in the ACE Basin and is a staging area for Research, Law Enforcement and Education for SCDNR as well as other agencies and education groups. The project is needed to provide ADA access to staff, the general public and students who use the facility to further their education. Project should take approximately 10 months to complete.

Description

The Department of Natural Resources (DNR) requests approval from Joint Bond Review Committee Staff to establish a project for the purpose of restoring approximately 1000 linear feet of an unnamed tributary to Flat Creek on the DNR Forty Acre Rock Heritage Preserve and Wildlife Management Area, located in Lancaster County. The project would include the stabilization of the confluence of four additional tributaries to Flat Creek and some live staking on the tributaries where needed. The restoration work was established in the Restoration Plan dated August 26, 2014 to mitigate for impacts to waters of the United States associated with the Haile Gold Mine permit (SAC-1992-24122-4IA) approved by the United States Army Corps of Engineers (USACE) and the South Carolina Department of Health and Environmental Control (SCDHEC).

DNR intends to procure the services a stream engineer professional to provide construction design plans, implement and oversee construction, and monitor the project for a minimum of five years post-construction/planting. Additionally, adaptive management will also be a part of the contract work. The contractor will provide a written report to include a monitoring assessment during post-construction and for each year of monitoring. The department estimates the total project budget to be \$247,000.

Description

To undertake corrective actions that are needed to protect and stabilize the seawall, bulkhead, fenders and sheetpile of the boatslip located at Fort Johnson. Also to replace the the 22 year old existing utilities such as; the electrical system, subfeeders and domestic water to include all support structures/equipment supplying the research vessels and Law Enforcement that use the slip 24/7. Numerous State and Federal projects are conducted on the research vessels moored in the boat slip as well as missions conducted by Law Enforcement. This is for Phase Two of the renovation. Once the additional funding is received Phase Two should take 12 to 18 months to complete. There are no alternatives to the renovation work. The additional \$2,000,000 appropriated for FY 2020 will be added to complete the project.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee staff to proceed with the project to rehabilitate Crab Bank, located in Charleston Harbor. The rehabilitation is made possible as a result of the Post-45 Charleston Harbor Deepening project and will utilize certain dredged material from the harbor bottom. The US Army Corps of Engineers is expected to begin work within 120 days of signing off on the contract to place certain dredge materials on Crab Bank. Execution of the agreement is expected before August 30, 2019.

The plan for rehabilitation of Crab Bank calls for the placement of 660,000 cubic yards of suitable dredged material on Crab Bank, increasing the size from 0.5 acre to 80 acres (which will make available 28 acres of Brown Pelican nesting habitat at +2' Mean High Water). Island height will range between 6.5' (roughly 1' above mean high tide) and 10' Mean Low Low Water. Through modeling, USACE estimates that approximately 0.64 acres of the island would remain in 50 years following rehabilitation.

The USACE has determined the cost share for SCDNR will be \$132,216, a significant reduction from initial estimates. Funding for this work will be from a National Fish & Wildlife Foundation grant \$66,108, and the remaining \$66,108 from donations to the Nongame and Natural Areas Fund - Coastal Birds. Completion of the project could take up to a year and is dependant on weather.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee and State Fiscal Accountability Authority to acquire approximately 593 acres of land in Lancaster County. The property is being offered by The Conservation Fund, 1655 N. Fort Myer Dr, Ste 1300 Arlington, VA 22209-31989.

The property is located four miles northwest of the Liberty Hill community and is west of SC Highway 97. The DNR's Liberty Hill WMA adjoins the tract on the north, east and south sides. The tract contains forested uplands, high bluffs, granite outcrops, and Piedmont streams. The property provides habitat for deer, turkey and small game. Non-game species, including the golden eagle, have been documented on the adjoining WMA. After it is acquired, the property will be managed as part of the Liberty Hill WMA and be open to the public for outdoor recreational opportunities, including bird watching, hiking, hunting and fishing on the adjacent Catawba River.

Funding for due diligence activities will come from the DNR Fish & Wildlife Protection Fund-Timber account. The proposed purchase price is \$1,800,000 which will be funded from the Fish & Wildlife Protection Fund - Timber and Deer accounts in conjunction with a US Department of Interior Forest Legacy Program grant. The total cost of the acquisition is not expected to exceed \$1,820,000.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee to acquire approximately 129 acres of land in Aiken County. The property is being offered by Tom Taylor, 312 Laurel Dr, Graniteville, SC 29829.

The property is in northwestern Aiken County approximately 10 miles northwest of Aiken. The property is characterized by rolling topography with 25% mixed pine and hardwood areas, 60% open grasslands, and 15% in freshwater ponds, streams, and hardwood bottomland. There is currently one mobile home on this parcel. The owner has agreed to move the mobile home off the property prior to an acquisition. This property contains the nationally renowned Stoney Bluff alkaline glaze stoneware site(38AK0854), also known as the "Dave Site." It provides habitat for deer, turkey, small game, waterfowl and many other plant and animal species. After the land is acquired, it will be managed as the Stoney Bluff Heritage Preserve. The preserve will have varying degrees of public access. The management plan will reflect the sensitivity of the resources protected on this site and public access will be provided accordingly.

Funding for all project activities will come from the DNR Heritage Land Trust Fund. The proposed purchase price is \$750,000. The total cost of the acquisition is not expected to exceed \$770,000.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee to acquire approximately 134.77 acres of land in Aiken County. The property is being offered by Michael Fulford, 200 Red Bud Ln, Trenton, SC 29847.

The property is in southeastern Edgefield County approximately 2.5 miles southeast of Trenton. The property is characterized by rolling topography with 60% in 4 year old longleaf pines, 10% mixed pine and hardwoods, 10% bottomland hardwoods, and 10% in a freshwater pond which is fed by Horse Creek. There is one 3000 sq. ft. structure on the property which would be utilized by the department. The property contains the historically significant alkaline glaze stoneware Baynam Site(38ED0221). It provides habitat for deer, turkey, small game, waterfowl, and many other plant and animal species. After the land is acquired, it will be managed as the Horse Creek Heritage Preserve. The preserve will have varying degrees of public access. The management plan will reflect the sensitivity of the resources protected on this site and public access will be provided accordingly.

Funding for all project activities will come from the DNR Heritage Land Trust Fund. The proposed purchase price is \$950,000. The total cost of the acquisition is not expected to exceed \$970,000.

Description

The Department of Natural Resources requests approval from JBRC Staff to authorize the establishment of a project to determine the full cost of constructing a floating dock on the Santee Coastal Reserve WMA that will replace an existing structure.

Staff must access portions of the WMA by boat for property management activities. A dock provides a stable platform to load and unload equipment and provides safe access for staff for embarking and disembarking boats and barges. Waterfowl hunters also use this dock to access remote waterfowl impoundments for public lottery hunt dates. There are no alternatives as the boat ramp is located on the site.

The estimated cost for the project is \$234,800. Funding will come from the Fish & Wildlife Protection Fund-Timber account.

			1,559,000

Operating Budget Impact	Fund Group	Recurs	Amount
-------------------------	------------	--------	--------

Description

The Department of Natural Resources (DNR) requests approval from Joint Bond Review Committee staff and State Fiscal Accountability Authority staff to establish and execute a project to repair and restore the dike system for 3,308 acres of managed predominately palustrine emergent wetlands on the Cape which is part of the Santee Coastal Reserve Wildlife Management Area in Charleston County. Repairs and renovations to the existing dike system will allow staff to effectively manage habitat within the impoundments primarily for migratory waterfowl utilizing the Atlantic Flyway. In addition numerous wading birds, reptiles and amphibians benefit from this management. The DNR also provides opportunity for the public to participate in public lottery waterfowl hunts on the Cape.

The project will provide for the installation/replacement of (a) eleven (11) rice field trunks to control water flow through the dike, and (b) one internal wooden spillway box, (c) re-topping 10,590 linear feet of dike to a top width of 14 feet with slope to remain within the existing footprint so as to prevent over-topping during high tides, (d) construct/replace 214 linear feet of bulkhead, and (e) enhance or re-establish 3,650 linear feet of berm on the inside of the dike. Material for refurbishing the dikes and berms will come from the existing canal located inside the impoundment. To repair the dikes and install the trunks, earth moving equipment such as a track-hoe must be mobilized.

The Department estimates repair and restoration costs to be \$1,559,000 and requests budget be established to proceed with the project. Funds in the amount of \$424,974 will come from funds transferred to the DNR by the SC Conservation Bank for the purpose of supporting North American Wetlands Conservation Act projects. Funds in the amount of \$1,000,000 will be from a U.S. Fish and Wildlife Service grant titled "Santee Coastal Reserve Wetlands Restoration Project" (SC-C-F18AP00410). The department has documented and is using in kind match for the federal grant from the Cedar Island Dike Repair project (\$121,026), Ducks Unlimited (\$11,000), Open Space Institute (\$1,000) and Audubon South Carolina (\$1,000). This project does not qualify for FEMA Public Assistance program funding and is expected to be completed in March of 2020.

Description

Accept a donation of 118.54 acres of land known as the Jackson Tract from the SC Department of Transportation (SCDOT) for mitigation to impacts to waters of the United States and the associated U.S. Army Corps of Engineers permit for the widening of Belvedere Road in Aiken County. The Jackson Tract, also located in Aiken County, will be protected under the Heritage Trust Act and incorporated into the adjacent existing Henderson Heritage Preserve (HP). The Jackson Tract is predominantly a longleaf pine-scrub oak sandhills ecosystem. Bridge Creek serves as the northwestern boundary for the Henderson HP; accepting this donation provides further protection for Bridge Creek, enhancing water quality and the riparian vegetation through prescribed fire. The management of this addition with proper fire regimes will promote seed germination of the Sandhills Rosemary, a native plant species of conservation concern identified in the State Wildlife Action Plan. Sandhills Rosemary have been identified on the Jackson Tract. The addition of these lands to the Henderson HP will provide opportunities for the general public to enjoy outdoor recreation. General management costs incurred will be supported by Heritage Trust Funds (SC Code of Laws Title 51, Chapter 17) and/or federal Wildlife Restoration Funds (Pittman-Robertson Act). Anticipated transfer may occur 2019-2020.

Description

The Poinsett Bridge on the Old Saluda Mountain Road, a stone arch bridge built in 1820, and listed in the National Register of Historic places is in need of restoration work that would stabilize the bridge, maintain the existing structural capacity, rehabilitate the roadbed on the bridge and address erosion around the bridge.

Engineering assessments performed in 2005 and 2015 note structural deficiencies that need to be addressed. One spandrel wall/retaining wall developed a 1 1/4" bulge between assessments. Waterproofing behind the arch needs to be performed. Mortar needs to be repointed, fallen and missing stones replaced, cleaning to remove vegetation and mold from mortar and stones, roadbed fill replaced and drainage installed to reduce the effects of erosion. Improvements to access points around the bridge would enhance the experience for visitors. Certain facets of work will need to be performed by skilled labor accustomed to restoring historical structures.

Alternatives to performing the restoration work would be to allow the continued deterioration of the structure.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee to establish a project for investigating the acquisition of approximately 58.9 acres of land in Lancaster County. The property adjoins DNR's Forty Acre Rock Heritage Preserve/Wildlife Management Area and is being offered by Open Space Institute Land Trust, Inc 1350 Broadway, Rm 201 New York, NY 10018.

Located approximately 10 miles north of Kershaw, it adjoins the northwest side of the preserve and is characterized by rolling topography, geological formations, upland forested areas and bottomland hardwoods. The property contains 0.4 miles of tributaries to Flat Creek, which provides habitat for the Carolina heelsplitter, a federally endangered mussel, and the brook floater, an at risk mussel species. More than a dozen rare and endangered plant species are found on the adjacent preserve. After the land is acquired, it will be managed as part of the Forty Acre Rock HP/WMA and will be open to the public for hunting, hiking, viewing wildlife and enjoying nature.

Funding for a boundary survey and Phase I ESA will be provided by Open Space Institute and DNR will be named as a recipient of the ESA. Funding for all other due diligence activities and the land acquisition, which should be \$133,000, is from a Lynches River Conservation Fund grant. The total cost of the project should not exceed \$153,000.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee to establish a project for investigating the acquisition of approximately 58.6 acres of land in eastern Lancaster County. The property adjoins DNR's Forty Acre Rock Heritage Preserve/Wildlife Management Area and is being offered by Open Space Institute Land Trust, Inc 1350 Broadway, Rm 201 New York, NY 10018.

Located approximately 10 miles north of Kershaw, it adjoins the northern side of the preserve and is characterized by rolling topography, geological formations, upland forested areas and bottomland hardwoods. The property contains 0.9 miles of tributaries to Flat Creek, which provides habitat for the Carolina heelsplitter, a federally endangered mussel, and the brook floater, an at risk mussel species. More than a dozen rare and endangered plant species are found on the adjacent preserve. After the land is acquired, it will be managed as part of the Forty Acre Rock HP/WMA and will be open to the public for hunting, hiking, viewing wildlife and enjoying nature.

The department requests an initial budget of \$20,000 to conduct due diligence activities. Funding for a boundary survey and Phase I ESA will be provided by Open Space Institute and DNR will be named as a recipient of the ESA. Funding for all other due diligence activities and the land acquisition, which should be \$200,000, is from the Heritage Land Trust Fund. The total cost of the project should not exceed \$220,000.

Description

Description: Development of a youth shooting sports facility to provide opportunities for education, recreation, competition, and improvement in safety and shooting skills. This facility will provide SCDNR a location to host local, regional and state tournaments in support of the agency shooting sports programs as well as an area designated for youth hunting and education. The total estimated cost for the project is \$2,000,000.

Justification: SCDNR's shooting sports program has grown exponentially over the past years from single day tournaments to multi day events. Locating venues capable of accommodating the large numbers of participants, family members and staff has become increasingly difficult. This facility would be located near the center of the state with sufficient number of shooting fields, parking and other accommodations that would accommodate current and future needs of the program.

Description

SCDNR has maintained a workstation in Rock Hill located on property leased from Duke Energy since the late 1970s. The facility consists of two modular office buildings (one as office space and one as lab space), one mobile home used to as bunk space for staff working in the area and student interns, and a storage building for project equipment and boats. The modular units were installed between 1989 and 1990. The mobile home has been in use on site since 1977. The storage building has been on site since at least 1980 with an addition made in about 1987-88.

SCDNR's lease for this site expires in December 2019. Under the new Federal Energy Relicensing Commission(FERC) license for the Lake Wylie hydropower plant, Duke is committed to develop a public park on the site of the Rock Hill workstation and needs SCDNR to vacate the property as soon as possible. The trailers are not likely to survive a relocation and will be surplus. Disposal costs for existing trailers will be absorbed by Duke Power.

SCDNR proposes to relocate the Rock Hill workstation to the site of SCDNR's York Law Enforcement office. This move will require the construction of a building and potentially additional storage on the York site. SCDNR proposes to construct office and lab space at the York site with a structure not to exceed \$250,000 for this effort. Staff is currently evaluating a stick built option and modular options to satisfy this need.

Description

The Department of Natural Resources proposes to acquire approximately 1,023 acres of land in Laurens County. The property is being offered by the Laurens County Water and Sewer Commission, 3850 US Hwy 221 S, Laurens, SC 29360.

The property, which contains Lake Rabon, is located five miles west of Laurens. The lake comprises most of the tract, with some adjoining uplands. A subdivision borders two sides of the lake and a park adjoins the south side. Amenities include an administration building, a large meeting shelter, 3 picnic shelters, restrooms, playground equipment, paved trails, parking lots and a boat ramp. After it is acquired, the property will be managed to enhance fish habitat and added to the State Lakes program. The property will also provide outdoor recreational and educational opportunities to the public.

Funding for due diligence activities will come from funds requested by the DNR from the SC Conservation Bank. The total cost of the acquisition is not expected to exceed \$5,020,000.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee to complete the acquisition of approximately 225 acres of land located in eastern Horry County. The land, which adjoins the DNR's Waccamaw River Heritage Preserve (HP) / Wildlife Management Area (WMA), is being offered by The Mossy Oak Preserve, Inc of Murrells Inlet, SC.

The appraised value of the tract was established at \$520,000 and the proposed purchase price is \$468,000. A copy of the appraisal is attached. The Phase I Environmental Site Assessment is attached, notes no adverse findings and a Phase II is not recommended. The wooden structure noted on the property will not be utilized by the department. Onsite wells noted in the report will be maintained to assist with controlled burns. Letters of support for the acquisition are also attached from Horry County Council and Horry County School District.

The department requests an increase of \$468,000 in project budget to complete the acquisition. Funding for acquisition will come from the DNR's Heritage Land Trust Fund. The total cost of the project should not exceed \$488,000. The department also requests the Department of Administration issue a Certificate of Acceptance for the acquisition.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee staff to complete the transfer of approximately 442 acres of land in Williamsburg County donated from the SC Department of Transportation (DOT). The land donation will satisfy a portion of the mitigation plan requirements for natural resources impacts due to a highway widening project.

The tract fronts 12,000 linear feet of frontage along the Black River. The site also contains a bottomland hardwood and habitat for wildlife.

After the property is acquired, the DNR anticipates establishing a Wildlife Management Area open to the public to enjoy outdoor recreational activities, including hiking, canoeing, hunting, fishing, and viewing wildlife.

The DOT has agreed to pay all due diligence costs associated with the donation/transfer; therefore a budget will not be needed for the project. Since DOT already owns the property, letters of support from Williamsburg County Council and Williamsburg County School District will not be required.

Description

The Department of Natural Resources (DNR) requests approval from the Joint Bond Review Committee and State Fiscal Accountability Authority to complete a project to renovate 16 buildings located on the 24,000 acre Tom Yawkey Wildlife Center in Georgetown County. The buildings range in size from 400 square feet to 3400 square feet. The renovations will primarily be routine maintenance such as roofing, painting, minor carpentry, electrical upgrades, plumbing upgrades, painting, and interior finishes. The majority of the buildings in question were constructed in the 1950's. The renovations will provide routine maintenance to ensure they are structurally sound and reliable for another 60 years. The structures have various uses including staff housing, equipment storage, temporary housing for college interns and students, public visitor space, project woodworking shop, and meeting facilities. The department estimates repair costs to be \$968,000 and requests budget be established to proceed with the project. The source of funding for the project is a Gift of Construction from the Yawkey Foundation. The Yawkey Foundation currently provides the annual operating funds for the Tom Yawkey Wildlife Center as part of the donation established by the Last Will and Testament of Thomas Yawkey in 1977.

Description

Demolish the 43 year old 48,000 square foot CCEHBR buiding located at 219 Fort Johnson Road located on the SCDNR Property .The building was construted to allow NOAA to have a Marine science Lababratory located near Charleston harbor to work as a partenr with SCDNR in the late 1970's. The buliding is in need of a complete restoration which includes downspout system to correct erosion from drainage, exterior doors, exterior shell, masonry rehabilitation, metal roof, fascia and soffit system, windows and skylights, floor and wall materials/finishes in laboratory spaces, interior doors, emergency lighting, way finding and exit signage, restrooms for code compliance, electrical system code compliance, and general ADA compliance. The structure due to its original design has very poor energy footprint which would be very costly to retrofit. Estimates for demolition and clearing the site are \$825,000.

Description

The Waddell Mariculture Center located in Bluffton is in need of significant renovation. Following the rehabiloitation of the Research Lab building the remaining outdoor facilities require maintenance. Phase II of the rehabilitation is addressing renovations/rehabilitation of pond liners, water control structures, harvest basins, electrical, and plumbing systems in the pond systems at the Waddell Mariculture Center. 30+ years of saltwater exposure have negatively impacted the pond systems at the Waddell Mariculture Center in Bluffton. Request is made for funds to renovate the growing systems to compliment the repairs begun in the main laboratory building to allow the DNR to continue to stock saltwater gamefish such as red drum, spotted seatrout, and cobia. The Center also serves as a home base for fisheries researchers, law enforcement, and wildlife biologists in the southern part of South Carolina.

Description

The Federal Emergency Management Agency has accepted a proposal from the department for a hazard mitigation plan designed to protect portions of the Central Energy Plant at Fort Johnson. The plan calls for the following: Add flood proof panels to all exterior openings, caulk all seams, add a 15 horsepower sump pump with a variable speed drive and elevate the emergency transformer and associated electrical panels. The Emergency generator was elevated during an earlier renovation. The Central Energy Plant for the Marine Resources Division is located at 217 Fort Johnson Road and is directly adjacent to Charleston Harbor. The Central Energy Plant is located in an AE-14 flood zone. The top of the finished floor is at 8 feet. The above items will give added protection to vital HVAC equipment and electrical power supplies which supply power and environmental conditions to 76,000 square feet of buildings. All of the equipment located in the room are on concrete pads, but the pads are less than 8 inches above the finished floor. The project cost is estimated at \$520,000.

Description

Repair approximately 75 foot of damaged 110 acre impoundment dike on Capers Island. The impound dike was damaged by Hurricanes Matthew and Irma. The impoundment provides valuable wildlife habitat and is the focal point for education and nonconsumptive wildlife uses. Approximately 68 species of birds occur commonly in the impoundment. The impoundment is unique in the habitat and is not typical of the other South Carolina estuarine systems that are characterized by freshwater drainage and brackish water conditions. The high salinity area provides an important nursery for many significant marine/estuarine species. Preserving the impoundment with repairs as needed is a critical part of the management plan. Waterfowl use the open areas for feeding, whereas shorebirds and waders use the outer edges and shallow flats.

Description

Stabilize 360 foot of bank/shoreline by using gabion bags and repair the flotation system of the existing floating dock. The Michael D. Mckenzie Field Station located at 15819 Bennett's Point Road located in Green Pond, SC has approximately 360 feet of bank/shoreline along Mosquito Creek in the ACE Basin. Due to the last several years of heavy rain/hurricanes the bank has started to erode, this erosion is starting to encroach on the 4,000 square foot Field Station which is used by SCDNR for education and outreach programs.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Department of Natural Resources

Description

If approved, this project will improve and restore infrastructure at the Barnwell Fish Hatchery. Due to a reduction in funds, the site has been maintained in caretaker status for the last 13 years. Efforts were recently initiated to bring the facility back into limited production. To maximize its capabilities, the harvest kettles and water control structures need to be updated and replaced. Also, the production ponds need to be deepened and re-contoured. Some infrastructure work is also needed on the property. The demand for fish to be stocked in the state's lakes and rivers is high and this facility will help meet the demand. Since the site was once used to produce fish and contains the appropriate facilities to do so again, other alternatives would result in much higher costs. The on-site hatchery manager's house is in need of replacement. Water intrusion due to a site situated in a low lying area which is impacted by runoff from surrounding development, termite damage and asbestos containing materials necessitated the demolition of the structure. Relocating the house next to Lake Edgar Brown, which is just up the hill, is a more suitable location for the hatchery managers house.

Project Elements

- \$250,000 Replacing hatchery manager's house
- \$500,000 Remove existing harvest kettles and water control structures from all 10 production ponds. Deepen and re-contour all production ponds and rebuild dikes where needed. Replace water supply and electrical lines where needed.
- \$875,000 Build new harvest kettles and water control structures in all ponds.
- \$115,000 Modernize fish house infrastructure (electrical, plumbing, tanks, etc)
- \$60,000 Replace fish food storage shed

The demand for fish to be stocked in the state's lakes and rivers is high and this facility will help meet the demand. Since the site was once used to produce fish and contains the appropriate facilities to do so again, other alternatives would result in much higher costs.

			(50,000)

Description

The property immediately behind the Marine Resources Research Institute (MRRI) has little to no elevation to protect it from shallow coastal flooding off of Charleston Harbor. The last two hurricanes damaged the buffer zone which provided protection to the structure. The periodic king tides and high flood water from hurricanes are encroaching on the foundation of the 56,000 square foot structure. The best protection alternative for the lab building suggests a recycled vinyl bulkead built to provide a 4' barrier behind the lab will help control the problem. The cost is estimated to total \$585,500. Numerous state and Federal projects are located in the facility and would be unable to complete their mission if the structure is compromised by the high tides. The department has no other alternatives at this time.

Description

The Marshlands House (built in 1810) and the Quarentine Officers Quarters are listed on the National Register of Historic Places. They are located at Fort Johnson on Charleston harbor and the salt water has been harsh on the exterior paint and woodwork. This project will replace any damaged wood and apply fresh primer and paint to protect the structures. There may be some interior work to repair items damaged from any water penetrating the structure. These two houses contain DNR and Federal employees who do environmental work as well as Education and Outreach Programs. Once the project is established the time frame for completion is approximately 6-12 months.

Description

If approved, this project will replace six trout production raceways, which were installed in the late 1950s. The raceways were recoated to extend their usable life 12-15 years ago. They are used 12 months a year with a constant water flow of approximately 600 gallon per minute. This constant flow and accompanying hydrostatic load has begun to create cracks in the raceway floors. To ensure long term fish production at the facility, the existing raceways need to be reconstructed. The facility is in a remote location suitable for it's purpose as a trout hatchery. No alternatives exist.

Description

Accept a donation of 205.8 acres of land known as the Good Hope Tract from Dorchester County for mitigation to impacts to waters of the United States and the associated U.S. Army Corps of Engineers permit for the expansion of the Oakridge Landfill in Dorchester County. The Good Hope Tract, located in Colleton County, will be incorporated into the nearby (across the river) Edisto River Wildlife Management Area (WMA). The Good Hope tract protects over one mile of the Edisto River's riparian area and associated floodplain bottomland hardwood wetlands providing protection for the Edisto River, one of the longest, free-flowing blackwater rivers in North America, and its inhabitants. The addition of these lands to the Edisto River WMA will provide opportunities for the general public to enjoy outdoor recreation. General management costs incurred will be supported by federal Wildlife Restoration Funds (Pittman-Robertson Act). Anticipated transfer may occur 2019-2020.

Description

Description: Construct a shooting sports facility to provide opportunities for education, recreation, competition, and improvement in safety and shooting skills that will be available and accessible to all hunting and shooting sports enthusiasts in the region.

Justification: Hunting and Shooting sports enthusiasts are the most important supporters of wildlife management in South Carolina and the nation. These activities are vital to South Carolina's economy and a tradition for many South Carolinian's. One of SCDNR's efforts to promote hunting, hunter education and shooting sports is to increase the number of properly designed shooting ranges in the State. This will also go a long way to meeting an increasing demand for shooting practice as a public outdoor recreational pursuit as well as enhance hunter skills and safety.

Maintenance and Repairs	Other Funds - Existing	>5 Years	

Description

The beach was last nourished in 2007 and six groins were constructed in 2008. The 2007-2008 project has performed as designed and slowed erosion significantly. Additional groins and nourishment are need to maintain a safe high tide beach for park visitors. Additional erosion has occurred since the phase 1 submission for this project due to Hurricane Joaquin (10/2015) and Hurricane Matthew (10/2016). Additional erosion has occurred due to the USACE permit process being delay by appeals; therefore, additional erosion has required meaning that additional nourishment is required.

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	Other Funds - Existing	>5 Years	(10,000)
			(10,000)

Description

The project consists of replacing and upgrading existing campground utilities at parks statewide through a planned approach. Water, Electrical and Sewer utilities currently in use at these sites are outdated and a source of constant repair needs, resulting in lost time and increased operating expenses. The upgrades to these utilities would provide the customer a safer and better experience, save the agency money, and increase the overall revenue. The other alternative is to continue operating as is until these popular campgrounds become too expensive to operate or unsafe. This option would lead to lost revenue to the State and lost recreational opportunities to the public.

Maintenance and Repairs	Other Funds - Additional	>5 Years	(7,500)
Utilities	Other Funds - Additional	>5 Years	(1,000)
			(6,500)

Description

These funds would go to make repairs on one of the most important facilities we have in SC State Parks, comfort stations used by our campers. This past fiscal year, we hosted almost 400,000 nights spent by campers on our campsites, which takes a toll on the facilities they regularly use. These comfort stations are in need of upgrades and repairs, modernizing the amenities, and installing more energy efficient appliances. These funds would ensure a more pleasant customer experience as well as help reduce operational costs. The alternative is to operate as is with less efficient facilities and reduced customer service. This will eventually lead to loss revenue and facility closure.

Operating Budget Impact	Fund Group	Rekurs	Amount
Maintenance and Repairs	Other Funds - Existing	>5 Years	(15,000)
			(15,000)

Description

The project consists of repairing existing roads and parking (approximately 8 miles) at Hunting Island State Park that have severe wear as a result of age and heavy usage. This park has been one of the most visited parks year after year. There is little alternative to repairing the road as it is a barrier island and repairing the roads in their current location is more environmentally sensitive. If we do not repair the roads, eventually sections of the park will be closed.

Description

Several freshwater parks have erosion issues needing shoreline stabilization concentrated in areas impacting revenue-producing facilities (mainly campsites). All of these parks have roads and campsites that are in need of stabilization due to erosion. Over the past several years, we have spent tens of thousands of dollars to protect infrastructure that is being threatened by encroaching bodies of water. However, there is not enough funding currently available to remedy the problem long-term. We have been targeting areas that are in dire need, but without major work, these areas will fall prey to erosion, thereby eliminating revenue generating facilities and park visitor recreational opportunities.

Description

The Fair Play Welcome Center was constructed in 1967. This facility continues to experience structural and maintenance issues that compromise both the integrity of the facility and the visitor's experience. This ultimately results in increasing maintenance costs and potential losses in revenue for the State's tourism related businesses. The new facility will greatly improve the visitor experience, the staff's ability to interact with the visitor, and be more energy efficient. The project consists of demolition of the existing outdated and inefficient Welcome Center at Fair Play. The project also includes the construction of a new, more efficient Welcome Center at the site. Alternatives: Continue to operate as is with increasing maintenance costs and reduced visitor experience. This option also reduces potential revenue for the State in tourism related businesses.

Description

This project consists of replacing an aged ranger residence with energy efficient home(s) for an onsite ranger. Park operation often requires onsite rangers to respond to emergencies. Attracting employees is often difficult due to facility remoteness and poor housing. The alternative is to operate as is with a non-efficient facility until it becomes too unsafe to occupy. Residences will be replaced thru a phased approach as funds become available. A partial list of parks that have residences that have been identified for replacement are Myrtle Beach, Hickory Knob, Dreher Island and Edisto Beach. Edisto Beach has been identified to be completed first, at this time.

Description

This project consists of the replacement, repair, and updating of exhibits at state parks throughout the state. State Parks exhibits enhance our visitors' appreciation and experience. Exhibits educate our guests about the significant resources and orient them to park facilities and activities. Many of the exhibits have been in service for numerous years and have been damaged due to sun exposure, user wear and tear, vandalism, etc. and maybe displaying dated information. The goal of the new exhibits are to help enhance the visitor experience while providing educational information. The new exhibits may aid with increased revenue generation. The other alternative is to continue operating which would lead to lost revenue to the State and negatively impact the public's experience. Preliminary estimates associated with various parks are as follows: Caesars Head - \$200,000; Edisto - \$100,000; Musgrove Mill - \$100,000; Charles Towne landing - \$100,000

Description

The Hunting Island Lighthouse is one of the most iconic structures within the South Carolina State Parks system, the number of annual visitors to the lighthouse alone is above 50,000. Due to the salt air and the number of visitors, wear and tear occurs at an accelerated rate. A 2018 structural analysis conducted by an independent contractor, commissioned by the SCSP, revealed several major issues that need repair and or replacement to ensure continued safe visitor use. Various other minor repairs, identified within the assessment of the Hunting Island Lighthouse, may occur at this time as well. The goal of this project is to help to preserve the Hunting Island Lighthouse for future generations. The alternative is to forgo repairs and continue to operate with reduced visitor experience, which will lead to the closure of the structure and result in lost visitorship and revenue.

Description

The Charles Towne Landing (CTL) Animal Forest Enclosures were completed in 2006. Despite preventative maintenance, age is beginning to catch up with the enclosures. However there are not sufficient funds to complete the upgrades. Charles Towne Landing continues to be one of the South Carolina State Parks Service's popular parks, especially with the City of Charleston's 350th celebration approaching. The alternative is to forgo upgrades and repairs until such a point that the facilities are no longer safe and/or serviceable, resulting in decreased visitorship and revenue.

Description

The Gap Creek Property is a 954 acre parcel (approximately) that is currently under a wildlife management agreement with the South Carolina Department of Natural Resources. The property is located off of Highway 25 adjacent to Table Rock and Mountain Bridge Wilderness area (Caesars Head State Park and Jones Gap State Park). SCPRT is looking to protect this valuable resources while providing public access to the property through additional trails (along with parking, restroom facility and other required structures) once the property has been acquired. The acquisition of the property is currently in process. The Gap Creek property is anticipated to provide visitors with an opportunity to experience diverse flora and fauna.

Description

The funds would go to making replace or repair existing water system infrastructure. Potable water is a necessity at facilities throughout the Agency. Many of these systems have been in service for several decades and a showing signs of their age; therefore, various water system components (valves, water mains, tanks, and other appurtenances) need to be repaired or replaced. These funds would help to ensure a potable water as well as help reduce operational costs. The alternative is to operate as is with less efficient water systems and adversely impact the guests' experiences. Water system issues could eventually lead to loss revenue and facility closure. The water systems that have been identified first include: Table Rock, Oconee, Hunting Island and Sesquicentennial State Parks.

Description

The Agency is currently looking at the acquisition of two (2) additional properties, which include the McGee Property (Parris Mountain State Park) and the Givhans Ferry Property. The typical acquisition cost (closing fees/title transfer) associated with property acquisitions are around \$5,000 per property. There are no alternatives considered since these are donated properties adjacent to current state parks. These additional properties will help to preserve and protect state parks that they boarder.

Description

The Welcome Center was constructed in 1980. This facility continues to experience structural and maintenance issues that compromise both the integrity of the facility and the visitor's experience. This ultimately results in increasing maintenance costs and potential losses in revenue for the State's tourism related businesses. The new facility will greatly improve the visitor experience, the staff's ability to interact with the visitor, and be more energy efficient. The project consists of demolition of the existing outdated and inefficient Welcome Center. The project also includes the construction of a new, more efficient Welcome Center at the site. Alternatives: Continue to operate as is with increasing maintenance costs and reduced visitor experience. This option also reduces potential revenue for the State in tourism related businesses.

Description

This project is to remove asbestos, lead, and mold from multiple SCPRT facilities. These facilities were identified in the 2001 Statewide Asbestos Survey. Facilities will be addressed as they become available for asbestos removal and repairs. Most facilities built in the 1970's and early 80's have asbestos in the flooring, ceiling and sheetrock mud. HVAC insulation systems built during this time also have asbestos issues, and painting materials may contain lead. This project is needed to remove hazardous materials from the public and staff, and to comply with EPA and SCDHEC regulations. This project will improve the indoor air quality, domestic water quality, and provide a healthier indoor environment to our visitors and staff. Because the removal projects are regulated, no alternatives were identified.

Description

The Calhoun Falls Marina is located on Lake Russell and has a total of 36 rentable marina slips. The existing marina was constructed in the 1980's and is showing signs of its age. The existing marina consist of floating concrete sections which have a tendency to crack under repeated stresses. A new marina would provide help to enhance the adjacent office facility, which may aid in increase revenue thru increased park visitation and increased marina occupancy. The alternative is to continue to operate as-is with increasing maintenance costs and reduced visitor experience. This option reduced potential revenue for the Agency.

Description

Fisheries are a large attraction for visitors and guests at various state parks throughout the state. Over the years, these freshwater fisheries bodies have been utilized for recreation, which include canoeing, kayaking, fishing, etc. Aquatic management practices haven been utilized to keep these freshwater ecosystems healthy. Funding is being sought to improve these freshwater fisheries located at various parks via a variety of methods that included but is not limited to; aquatic weed management, aquatic assessments, fish stocking, access improvements, dredging, and public awareness programs. Healthy fisheries will likely aid with park visitation, allowing the South Carolina Department of Parks, Recreation & Tourism to get closer to their goal of self-sufficiency.

Description

Several freshwater parks have erosion issues needing shoreline stabilization concentrated in areas impacting revenue-producing facilities (mainly campsites). All of these parks have roads and campsites that are in need of stabilization due to erosion. Over the past several years, we have spent tens of thousands of dollars to protect infrastructure that is being threatened by encroaching bodies of water. However, there is not enough funding currently available to remedy the problem long-term. We have been targeting areas that are in dire need, but without major work, these areas will fall prey to erosion, thereby eliminating revenue generating facilities and park visitor recreational opportunities.

Description

The various historic homes host many events throughout the year and are in need of repairs, painting, and other upgrades. These funds would provide for the completion of critical maintenance, repairs, and preservation needs of the historic homes as well as replacing furniture and other amenities to keep these revenue generating facilities competitive. Alternatives investigated would be to stop renting facilities which would reduce revenue and still not address the needs of the historic homes. The other alternative is to operate as is and allow the facility to degrade further making repairs more expensive.

Description

This project will provide a new roof for the DPS/DMV Warehouse complex in Blythewood. The original warehouse was built in 1993 on a different piece of property within the complex, disassembled, and moved to its present location in 2000. The common area - bathroom, staging and loading dock, and an additional warehouse mirroring the existing structure were also added in 2000. When the DMV Headquarters was relocated to the DPS property, they moved into the original side of the warehouse. Consequently, the DMV portion of the facility is 26 years old and the common area and DPS portion is 19 years old. Because of the way these metal buildings were connected, they have a tendency to leak. However, the roof of the DMV warehouse and the common area have been extremely problematic. These roofs have been repaired and/or recoated numerous times in the past few years, but the repaired areas are again leaking due to heavy rains this summer. Buckets to collect rainwater are now positioned in four (4) locations on the DMV side, one (1) in the common area and two (2) on the DPS side. The DMV recently procured expensive equipment used in producing license plates and are renovating an area of the warehouse for that purpose. The existing leaks could damage DMV's financial investment, as well as archived items and administrative offices. Because of these factors, a roof consultant was requested to examine the roof. He recommended the entire 38,250 sq. ft. roof be replaced. The most efficient and effective solution would require insulation over the existing metal roof, covered with a monolithic membrane surface, and new flashing and gutters. The result will be a better conditioned and protected facility.

Operating Budget Impact	Fund Group	Recurs	Amount

Description

This project includes the replacement/upgrade of carpet and minor vinyl tile work as well as wall paint in two (2) locations with two (2) office buildings each. These facilities are Richland District 1 Headquarters - Troop 1 and Troop 1- Post D, and Florence District 5 Headquarters and Troop 5 - Post B. These buildings are 27 and 26 years old respectively, and the flooring has never been replaced. The walls have been painted since the original construction, however, that was approximately eleven years ago. Facilities maintenance staff recently attempted to paint the walls but because of staffing issues, they have only been able to paint one area at the District 1 Headquarters building. Additionally, completing the painting and flooring within one Capital Project would be much more efficient and expedient, as employees would only have to relocate one time. The new upgrades will include higher quality materials and a longer wear warranty.

Operating Budget Impact	Fund Group	Recurs	Amount
-------------------------	------------	--------	--------

Description

This project will be the design and construction of a 20,000 sq. ft. Central Evidence Facility (CEF) to house and preserve the evidence collected by DPS officers. The Preservation of Evidence Act requires these items be held for longer periods of time and the implementation of the agency's Criminal Interdiction Unit (CIU) will increase the amount of evidence received. The current approx. 6,000 sq. ft. of space in the Supply Warehouse is already at 95% of its maximum capacity and has no Emergency back-up or fire suppression system. One additional refrigeration unit with a capacity of 42.1 cubic ft. was added to the existing two units this year and is now 90% full. A 340 sq. ft. storage unit was also added this year because interior storage was reaching full capacity. In order to comply with the mandate of the Evidence Storage law, a new facility is required. A significant factor is the CEF can be constructed on DPS owned property within the Headquarters campus allowing access to parking and other DPS services. This new facility would accommodate the present and future evidence storage needs for 25 to 30 years. It is projected the long-term maintenance costs would be lower than similar facilities, as the building will be designed to LEED or Green Globes efficient and sustainable standards. These standards of efficiency and sustainability could extend the life of the building to at least 50 years. Alternative options to construction were explored by DPS, including leasing an existing property. After extensively researching this possibility, it was determined that the cost to renovate an existing building to meet the security standards of an evidence facility would not be cost effective.

Description

This project will replace the existing boiler system and components at the Supply Warehouse with a completely new and efficient code compliant system, including controls and piping designed for the current layout which has changed significantly over its 30 (plus) year lifespan. As interior changes were made, additional units and piping were added to the existing system to accommodate those changes making the system very inefficient. Parts have been replaced over the years; however, the piping can no longer be cleaned out due to the high probability of leaks. Since first requesting this project, a new roofing system with additional insulation has been added to this facility thereby making the acquisition of a new HVAC system complying with present energy codes much more attainable.

Description

This project would replace HVAC systems in Highway Patrol field offices that have reached the end of their life cycle and/or do not meet present ASHRAE codes. This would represent approximately 20 buildings. In most of these buildings, ductwork will have to be replaced to accommodate the new units which subsequently increased the amount of funding requested. These new systems will provide greater efficiency and lower energy costs. It is our hope an Energy Grant will be attained to supplement some of the funds required for this project.

Description

This project would replace a 500 ton chiller and cooling tower at the DPS/DMV headquarters buildings. The chiller has been repaired numerous times and many of the parts are obsolete. It is currently not used due to the fact that the associated cooling tower is inoperable. However, this leaves a 24/7 facility with no mechanical redundancy. If one of the existing 300 ton chillers breaks down, the facility cannot operate. This new chiller and cooling tower would solve that problem and provide for greater efficiency. In addition, the older units will have a longer life because they will only be used when back-up is required. This would lower utility bills and maintenance costs.

--------------------------------	-------------------	---------------	---------------

Description

This project would repair and/or replace parking at the DPS/DMV headquarters. The majority of the paving was done in the late 1980's. Since the state acquired the property in 2003, only minor in-house repairs have been done. With the addition of a DMV branch, the traffic, including truck traffic has steadily increased. In addition, some ADA parking needs to be relocated and speed bumps added along the main entrance road. In most areas, the parking can be resurfaced and re-striped. However, due to increased rainfall this year, some of the parking lanes have lost asphalt in the center. In addition, there are some major areas of ponding where DMV gives road tests. In these locations, regrading and replacing the paving system will have to be done to avoid further damage.

Description

This project would repair and/or replace parking at 13 Highway Patrol facilities, to include the replacement or addition of exterior lighting. Many lighting upgrades are required and new fixtures would be a more cost effective option. Because deferred maintenance funds have not been available, a large portion of the existing paving will have to be totally replaced rather than just resurfaced. In some cases, regrading will have to be done to solve existing drainage problems. One facility has flooded several times due to the existing parking and building configurations.

Description

This project will replace the existing original electric boiler system at the DPS/DMV Headquarters Buildings in Blythewood with a more efficient gas boiler system. The existing underground storage tank which supplies this boiler is slowly leaking and is not on state property. This would be removed, as it would no longer be required. The new system would be located where an existing redundant generator is located. Consequently, the generator would be removed and salvaged. The present utility company serving the property has agreed to install the gas line to the new system.

Description

This project will include regrading and repaving the existing parking area at the Fleet Shop to prevent flooding into the existing facility, installing an HVAC system to replace outmoded individual units, and providing new paint and carpet in the administrative portions of the building. This 19 year old facility is used to decal and outfit new agency vehicles as well as to make all necessary service repairs for existing equipment. The building was initially built without a paving area, and therefore, was not elevated to the level needed to accommodate paving. The pavement was added later which allows water to run into the building during times of heavy rain. This has affected the eight (8) roll-up doors causing them to rust and warp which will require replacement. Regrading, adding catch basins and repaving will allow drainage to flow away from the building preventing this type damage. Once this problem is resolved, the interior improvements noted above can be made to the facility. A new HVAC system will replace inefficient and ineffective units, reducing utility and maintenance costs.

			245,000

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	Other Funds - Existing	1 Year/One Time	

Description

DOR has been working to become paperless over the past several years and the need for this space, for this purpose, is no longer necessary. DOR does however have a need for a larger meeting space to meet the needs of all departments for the Agency. In the two larger departments, meetings with management would be over 50 employees. DOR currently does not have a meeting space that can adequately accommodate that number of employees. In addition, meetings with statewide employees, such as Revenue Officers and Auditors would total more than 50 employees. DOR's Training department also holds training classes for the public and our employees. They too would benefit from a larger training space as they could hold fewer classes with more taxpayers or employees. This space would greatly enhance our ability to meet with management as well as training large groups of employees and taxpayers. This room is our only available space that would allow us to have a meeting room to meet these needs. Though DOR has been able to adapt to our current space constraints in regards to a large meeting space, having this would offer an easier option for management to meet with their departments.

Description

SCETV has a 400ft tower on the Aiken County property and the property is being sold to a developer. We initially exercised our right to purchase the portion of property that our tower is on. Officials from the county have countered with providing funds to build a new tower at a different location. SCETV has a MOU in place with the county for \$145,000 of encumbered funds from SCETV; the rest of the cost will be funded by the county from the sale of the property.

Description

This project is for the repair and renovation of the pedestrian balcony and walkway bridges that connect the 5000 building second and third floors to the upper campus. The existing bridge and balcony structure has significant damage to the concrete floor decks and their reinforcing steel. The damage is due to water intrusion into the structure over its 45 year lifetime. The structure is currently closed for safety reasons. Its closure causes significant difficulties for both students and staff in accessing the building. The repair and renovation of the pedestrian balcony and walkway bridge will meet ADA requirements and improve a critical life safety issue because of limited building egress.

Description

This project is for the Level 1 renovation and repair of the 100, 300, & 400 Buildings on the Main Campus, as well as the assessment of necessary Level 2 renovations for the same buildings. These facilities were all built in the 1960s and have had only minor updates to them over their life. Each one is in need of major repairs to the exterior surface, roof, HVAC, restrooms (for ADA compliance), and interior finishes. All are at the end of their useful life, without major work being done to revitalize them.

Description

Demolition of the 400 Building. This facility was built early in the 1960's and has had only minor updates over its life. This building has significant structural damage, mold issues and many building finishes are past their functional life. The building has a two-pipe HVAC system. The building has accessibility issues. A renovation project will be major likely affecting building architectural, structural, electrical elements, HVAC and need to include current code requirements.

Description

This project is for the replacement of the 600 Building roof. The roof is original to the building constructed in 1984. The roof, interior ceiling tiles and walls require repairs or replacement after most rain events. Lab Equipment and some machinery have been damaged by the leaks. Some classes have been interrupted by leaks during a rain event causing the students to relocate.

Description

The precast façade is shifting and deteriorating creating a safety concern for both the interior and exterior of the facility. Restoration of the precast façade is necessary to prevent further damage and mitigate failure.

The roof's evaluation rated the condition as "Red." The roofs are in poor condition and are at the end of their service life. 1 to 3 years of service may be remaining, but significant repairs are necessary to keep the roofs watertight until replacement.

Description

This project is for the renovation of the existing 200 Building to convert old HVAC training labs into welding labs. The HVAC lab spaces were vacated when the program moved into the new Automotive & HVAC Technology Center that was constructed in 2016. The college needs additional welding lab space to meet the student demand for the program. In addition, the building is over forty years old and needs upgrades to restroom plumbing and facilities for ADA compliance. No alternatives were considered, since the welding program is already in the same 200 Building.

Description

This project is for the construction budget for a new 50,000 sq ft Student Success Center that will be the new focal point of the FDTC Main Campus. The facility will house a state-of-the-art library/media center, 400 seat auditorium, and flexible configurable spaces for one on one and small group academic coaching and mentoring intended to improve student success rates in the classroom. In addition, the building will provide public information and enrollment services as well as spaces for career services and other activities to help our students transition into the workforce. The project may require the demolition of the existing 100 and 300 buildings. Other alternatives considered were to renovate and expand existing campus space. This idea was dismissed due to the outdated type of existing space, its overall condition, and location.

Description

This project is to renovate and reconfigure the traffic flow and all the student parking lots on the main campus of Florence-Darlington Technical College. It will reconfigure the parking in Lots A, B, C, and G to improve traffic flow, maximize number of parking spaces and eliminate pedestrian/vehicular conflicts. It will also create a pedestrian corridor that will run the length of campus and provide a strong connection between the Academic Core area of the front campus and the rear of campus, including the new Automotive & HVAC Technology Center. The result of the project will be to improve vehicular and pedestrian flow (Life Safety), increase parking capacity (Student Service & Capacity), and an improved student feeling of wellbeing while walking on campus (Student Safety and Satisfaction). The project will also include relocating of some utilities from overhead to in-ground, as well as renovations to green spaces and other utility upgrades.

Description

This project is for the construction of a new Truck Driver Training Facility, to be located on the Marion border near the inland port . The building would be a 10,000 sq ft facility with classrooms, instructor offices, and support space for minor truck maintenance. The college currently offers truck driver training classes from the parking lot of its SiMT site. The current site was designed as a passenger car parking lot. Its paving is not designed to handle the amount of wear and tear it is getting from semi truck traffic. The program has grown to the point that the existing location is no longer capable of handling the student volume and truck traffic. It is consuming a large amount of space in the student parking lot, and the closeness of the truck traffic to the student vehicle parking is not ideal. The trucking industry is demanding more qualified students coming from the program. This project will provide the dedicated facility that the truck driver training program needs to keep up with the industry demand for its graduates. The college has no other existing space to use for this purpose.

Description

This project is for the construction of a new Physical Plant/Maintenance Shop Building, and the demolition of the existing structures. The new Physical Plant/Maintenance Shop Building will be a 20,000 sq ft facility, replacing the existing 7300 sq ft Physical Plant and 2400 sq ft Maintenance Shop. The existing facilities were built in 1983 and have never had a major update. They are too small to meet the college's current and future needs. The new facility will provide increased inside storage that the college greatly needs today. Expanding the current facility in its current location is not desirable and there is no room to expand the facility in its current location. The college has no other existing space to use for this purpose.

Description

This project is to construct a new 25,000 sf Academic building in Hartsville, SC. It will replace the College's existing satellite facility, with a larger and more appropriately designed one, in a new and better location. The College would like to expand the programs and classes offered in Hartsville, to include some healthcare and technology options to students in northern Darlington County. The current facility was originally a power company office building, and it limits what can be done there. It is not expandable on the existing site, which is not in an ideal location. The City of Hartsville is creating an "Education Corridor" on property that was once a manufacturing site, and the Hartsville Community Foundation is providing the property for the College to construct the new facility. This "Education Corridor" includes The Governor's School for Math and Science and Coker College, and will include Florence-Darlington Technical College's new site.

Francis Marion University

Description

The Francis Marion Honors Center—will be a 15,000 square foot academic building and will include multi-purpose instructional classrooms that will be used by undergraduate students from many different disciplines. The Francis Marion Honors Center will also house the following academic programs:

- FMU Honors: The FMU Honors program provides accomplished and motivated students with a unique curriculum and enhanced educational opportunities that reward inquiry, stimulate learning, and promote community outreach initiatives. FMU Honors reflects the university's commitment to innovative instruction, a low student-to-faculty ratio, and non-traditional service and experiential learning.

- The McNair Center for Research and Service: Named for Governor Robert E. McNair, the McNair Center for Research and Service combines academic instruction, research initiatives, and community outreach. The McNair Center houses the McNair Scholars, a scholarship program that brings to campus a talented cadre of motivated young men and women committed to public service and community leadership. The learning experience for these South Carolinians includes involvement in service learning and study abroad. The learning experience for McNair Scholars is rigorous and prepares McNair Scholars for lifelong interest in and dedication to public service.

- FMU International Programs: The Francis Marion International Studies program is multi-disciplinary and focuses attention on two areas in particular: international politics and the international economy. Within that framework students may concentrate on geographic areas: Europe, Latin America, or Africa-Middle East-Asia. International Studies also includes International Exchange Programs that allow Francis Marion students to spend a semester abroad at one of our partner institutions and to learn more about the interconnected world in which they live.

This academic teaching and learning facility will also include faculty offices, seminar and conference rooms, and instructional space for the programs listed above, as well as for other university classes.

The Francis Marion University Honors Center requires a dedicated facility to accommodate current and future needs of the Pee Dee region of the state. All campus facilities with the size and features required to house these programs are being fully utilized for other programs. There are no alternatives to construction of this facility.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Francis Marion University

Description

The proposed Freshwater Ecology Research Center (The Center) will be a 12,000 sq. ft. educational and research resource for the state of South Carolina and more particularly to the northeastern region of the state. The Center will consist of a 6,000 sq. ft. conference facility wing as well as a 6,000 sq. ft. lab, office, classroom wing. The complex will sit on the northern edge of a 20-acre pond that will be used for research and educational purposes. Along with the onsite pond, the Pee Dee region has many rivers, ponds and freshwater wetlands that are vital to the health of the land. Areas of interest include the Pee Dee River, the Little Pee Dee River, Lynch River, Black River and Dargan's Pond.

Increasing population growth will bring rivers and wetlands under pressure of pollution. Pollution potentially comes from runoff from expansion of urban areas, industry and agriculture. The Center can help monitor pollution in various sites. It will provide laboratory space for scientists to study freshwater quality and community ecology of water bodies, and training for undergraduate students who might choose such areas for careers. It could allow regular monitoring of some key water sources to provide long-term data sets to study water quality over time.

Wetlands are vital for flood control as they store water just as a flood mitigation dam can do. Wetlands are more than just a place where water sits and the health and interaction of the organisms in the wetlands is important to the longevity of the resource. The freshwater ecology center will provide opportunities to study the organisms within the wetlands of the region.

Freshwater is becoming one of the most valuable resources and our natural resources need protection. Sources include area rivers and groundwater whose quality is so important for household users and industry.

The Center will be available for classes at Francis Marion University, visiting university groups and the K-12 system. School groups will visit to learn about freshwater habitats and their importance to our economic and physical health.

Description

The Francis Marion University Smith University Center renovations include locker rooms for men and women, showers, athletic training facilities, and offices. The current locker rooms and showers have undergone hardly any improvements since the building was constructed in 1974. As the number of teams and student-athletes within the FMU program have increased, the functionality of the facility fails to meet the needs of the programs and these renovations will bring the facilities to modern standards. The current athletic training room does not meet the minimum National Athletic Trainers' Association (NATA) requirements. This renovation will double the square footage and will provide increased rehabilitation facilities. Currently, staff members are using closet space for offices, and this renovation will afford improved and increased office space.

The Francis Marion University field house additions include a one-story expansion of the existing field house including an athletic training/therapy room, fitness/weight facility, offices, and locker room. The field house currently has no established training / therapy facilities for the baseball, softball, and soccer contests held at the Griffin Athletic Complex. With the growth in athletic programs, current locker room space does not accommodate the additional student athletes. This expansion allows for a locker room to be used by the FMU baseball team, visiting baseball and softball teams as well as the men's and women's soccer teams. The university currently does not have a fitness/weight facility for dedicated use by student-athletes. The current weight room is shared between the student-athletes and the student body, and this shared scheduling creates hardships on both groups.

These projects are on a consolidated A-1 due to the intent to use a revenue bond issuance to fund construction of these facilities. The current Revenue Bond for the athletic complex is available to be refinanced with potential savings of \$500,000 that can be included in this new issuance as a wrap-around new issuance of the existing issue. These projects are vital to not only the University Athletic plans but also to student life and enrollment management plans incorporating the increase of student athletes through team expansion. Current student athletes for 2019-20 are projected at 250 which were previously averaging 190-205.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Francis Marion University

Description

Campus Roads: The majority of roads within FMU's campus are not part of the SCDOT system and must be maintained by FMU. Roads on the FMU campus total approximately 4 miles and have not been repaved since 2000-2001. Estimated Cost: \$1,623,000.

Parking Lots: FMU manages approximately 1 million square feet of parking lots. All lots are in need of resurfacing with some requiring significant reconstruction due to normal usage and increased deterioration resulting from significant storms since 2015. Estimated Cost: \$1,425,000.

Sidewalks & Walkways: FMU has miles of sidewalks and walkways. The University annually seeks to ensure the safety of our walkways through resurfacing and repair. The majority of sidewalks are more than 30 years old and many have suffered substantial damage from roots and settling and require significant repair or replacement. Safe and accessible walkways are a critical component of the University infrastructure. Estimated Cost: \$900,000.

Roof Replacements: The roofs below have exceeded their useful life and must be replaced to prevent the compounded costs of water damage and mold remediation. Estimated Cost: \$1,400,000.

HVAC Systems: Several HVAC system components are well beyond useful life; these components have experienced deterioration that requires complete replacement of the units. Estimated Cost: \$977,000

Infrastructure: Much of FMU's storm sewer, potable water, sewage, and electrical support systems have significantly outlived their useful life and are in need of repair to prevent future significant failure. Portions of these systems are experiencing failures due to deterioration from age and storm damage. Many of the academic core buildings have interior elements like bathrooms, wall coverings and flooring that require modernization. Estimated Cost: \$1,175,000

Current Deferred Maintenance Priorities – Total: \$7,500,000

Proposed Permanent Improvement Project Details

Francis Marion University

Description

This project is to construct an approximately 61,000 square foot building on the campus of Francis Marion University for the School of Education and the School of Business. The building will provide 13 classrooms, one distance learning classroom, 4 computer laboratories, one open computer laboratory, 4 project rooms, a teaching materials center, 50 faculty offices, 2 dean's offices and various support staff facilities. This request includes one-time funding of \$23,000,000 for construction and start-up equipment and furnishings.

Detailed Justification for Funding:

The Schools of Education and Business currently reside in adjoining buildings constructed in the 1970's. Other disciplines currently sharing these facilities are the Department of English, Modern Languages & Philosophy, the Department of Political Science, History & Geography, and the Department of Psychology & Sociology. This new building will afford the opportunity for both the School of Education and the School of Business to reside in a building designed for and dedicated to the promotion of their respective undergraduate and graduate programs. This building can serve as a focal point for these two disciplines in similar fashion to the buildings dedicated to the Fine Arts and the Sciences already on campus.

With the goal of enhancing the delivery of undergraduate and graduate instruction for the School of Education and the School of Business, the flexibility of the design will allow the latest technological developments to be included in the completed building to positively affect instructional delivery. Additionally, the School of Business offers an undergraduate Computer Science program that should also benefit from technological enhancements within the new building.

Consistent with the mission of Francis Marion University on several levels, this facility will enhance the core mission of providing excellent undergraduate and graduate education. The FMU School of Business has the distinction of American Assembly of Collegiate Schools of Business (AACSB) accreditation.

The School of Education and Business requires a dedicated facility to accommodate current and future needs of the Pee Dee region of the State. All campus facilities with the size and features required to house these programs are being fully utilized for other programs. There are no alternatives to construction of this facility.

Description

This project is to replace a chiller that is not functioning. This project requires the removal of the existing water cooled chiller and installation of a new water cooled chiller. The new chiller will include a variable frequency drive for improved efficiency. Piping will be modified at the chiller as required to connect chilled water and condenser water. Isolation valves will be replaced. The existing access door is not situated to allow for replacement around the second chiller. The existing ventilation louver will be removed and the opening enlarged, to allow for the chiller to be removed and the new chiller installed. A new louver will be installed in the opening.

Description

Due to the growth in our engineering and outreach programs, GSSM needs an additional building to be used as an Outreach/Engineering Center. This building will include engineering space, virtual and blended classrooms to reach every school district in South Carolina, classrooms and laboratories to meet demand for outreach and teacher training through GSSM's programs. It will also provide space for expansion of our engineering program. GSSM also needs a 600-seat auditorium for assemblies, instruction and professional development opportunities. Since GSSM has never had an auditorium, we must convert our gymnasium for assemblies and such. In addition, we often must rent space for large assemblies when the gymnasium is not appropriate. To be a statewide, year-round educational resource center, GSSM needs the additional teaching spaces, laboratories and a 600-seat auditorium, to serve both our expanded residential student body and meet the needs of outreach education. NOTE: GSSM received A&E Appropriation in FY17 to conduct accurate programming and engineering cost estimate.

Description

GSSM plans to make major upgrades under this project to include: Athletic field lighting, laboratory upgrades, security and campus safety upgrades and door systems, parking lot reconfigurations and IT compatibility for growth. 9502 includes FFE items as presented and approved by the legislature. GSSM is currently underway with a \$550,000+ security and access control project under this project. It consolidates Phase I & II construction (completed seven years apart with different contractors), door access and controllers, software and hardware plus camera and security monitors into one integrated system. For the laboratories and other approved categories, we need to keep open A I 9502 as we are currently expending funds for facility upgrades as projected in the multi-year staged growth plans to complete and move our campus to full-capacity and operations.

Description

The shingled roofs at the SCGSAH were damaged in a hail storm in March 2017. The damage was discovered in August 2017 and an insurance claim was filed with the IRF. This project was not included in the 2017 CPIP since the damage was discovered after the plan submission. The shingled roofs are comprised of approximately 23,000 square feet of roof on the residence hall and 88,700 square feet on the Arts and Academic Buildings. These 20-year-old damaged roofs must now be replaced. The IRF paid \$430,848 on the insurance claim. Shepard & Associates, a roofing consultant as suggested by the State Engineer, estimates the total roofing replacement to cost approximately \$500,000 and professional fees to total \$40,000. A Phase I A-1 for A&E work has been approved for this project with a budget of \$40,000. SCGSAH plans to replace the damaged roofs with laminated asphalt and fiberglass shingle roofing systems, with a 20-year warranty, as recommended by Shepard & Associates.

Description

The SCGSAH elevators have reached the end of their expected 20-year useful life at the end of FY 2019. Two of our four elevators are located on the residence hall. These elevators have high usage and both maintain five levels (basement, 1st, 2nd, 3rd and 4th floors). These elevators both have extremely high use and generally both overheat and shut down at some point during each day of high use. We have had at least ten entrapments in the last year when elevators stopped during usage. The SCGSAH wishes to start with upgrading the two residence hall elevators by replacing the three most important components: the controller, the door operator and the pump/motor to bring the elevators up to code. Otis Elevator (the SCGSAH elevator service contractor) has quoted a price for the modernization of these two elevators. The total price to upgrade the two residence hall elevators is \$155,000.

Description

The SCGSAH parking lot and roads will be 20 years old in 2019. These surfaces have been repaired and resealed several times and are in need of repaving in FY 2020. A sidewalk would be added adjacent to the parking lot to ensure the safety of students leaving campus. Costs are calculated at \$5.00 per square foot for approximately 40,000 square feet of paved surface plus \$35,000 for the adjacent parking lot. No other alternatives exists other than to delay and continue to repair as much as possible.

Description

The SCGSAH HVAC chiller reached its (ASHRAE) life expectancy of 20 years old in 2019 and is at the end of its useful life. This is the central chiller and boiler that supply cold and hot water to all the air handlers and fan coils (heat exchangers) in the campus. The chiller and boiler must be replaced at the end of its useful life to prevent campus-wide loss of HVAC.

The current system is being maintained by a series of repeated service calls and repairs.

Description

The original HVAC split systems at the SCGSAH will be 20 years old in FY 2019. These six systems heat and cool all classrooms and offices. The systems will be at the end of their useful life in FY 2019 and should be replaced. Our HVAC service provider, Trane, estimates the cost of replacement of these six systems to be \$150,000.

Description

SCGSAH dining hall currently accommodates about 120 people. Usual school student population of about 240, plus staff that dines on campus far exceeds the dining hall capacity. The dining area is outdated and institutional, the furniture is the original furnishings that was 20 years old in FY 2019. The dining hall should be expanded and the furniture needs to be replaced. In 2016, SCGSAH food service provider, Aramark, donated \$210,000 toward the expansion of the dining hall. In 2018, SCGSAH engaged an architect to provide more comprehensive plans and cost estimates for this project. The architect's estimate for the dining hall expansion and concomitant relocation of the offices affected by the expansion is \$704,804. Total owner expenses, furniture, fixtures and equipment and professional fees, and contingency estimate is \$305,196. Total cost estimate to \$1,010,000. Subtracting the \$210,000 donation from Aramark, leaves \$800,000 to be requested from state appropriations.

Description

The current residence hall at the SCGSAH houses 242 students and 10 residential life coordinators. Rooms designated for students are arranged in two-room suites housing two students per room with two rooms (four students) sharing one bathroom. This style of residence hall is outdated and, compared to modern residence halls, is a deterrent to attracting students to the residential high school program. In FY 2020 the SCGSAH will initiate a study of potential renovations to the residence hall which will result in what options are possible for renovations and to clarify costs. The \$10,000,000 presented herein is a very rough estimate.

Description

Construct a new parking lot for students in vacant area, adjacent to Building 102, Student Success Center. This project will include site development, storm water systems, sidewalks, new LED lighting, and a new asphalt parking lot.

An increase in occupant use is anticipated once the renovation of Bldg. 102 is completed. The existing parking lot serving Bldg. 102, also provides parking for Bldg. 106. The additional parking lot will handle the anticipated additional student parking needs.

No alternatives were considered as this is the closest vacant area to Bldg. 102 and it identified for future parking in the 2012 Academic Master Plan.

Description

Construct new 135,000 sq. ft. multi-story, energy efficient, Arts & Health Sciences Building to replace existing Bldg. 120. Anchor programs relocating to the new building would include Biotechnology and Imaging Technology. Additional classrooms for arts and science programs would be included. This building would be LEED/Green Globes certified.

Building 120, circa 1970, is an outdated non-code compliant structure requiring replacement. The building envelope, HVAC, and electrical systems are not energy efficient, restrooms are not ADA compliant, classrooms are small, the electrical system is at capacity prohibiting program growth in Imaging Technology. The structural foundation of Bldg. 120 is not sufficient to support sustained growth and modernization.

Renovation of Bldg. 120 was considered but the internal structure of the building will not permit adequate renovations.

	19,250,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Utilities	General Funds - Existing	Indefinitely	77,400
			77,400

Description

The renovation will consist of remodeling/reconfiguring all three (3) floors, 93,000 sq. ft., and a new roof. Interior and exterior asbestos-containing materials will be abated. The project will include new classroom layouts, student engagement areas, and faculty work areas. Faculty offices will be redesigned to permit more faculty to be housed in the building. Energy efficient HVAC and lighting, ADA compliant restrooms, new fire alarm system, updated electrical and technology systems will be installed throughout the building. The existing elevator will be modernized and a second elevator will be added. The building will be certified as LEED or Green Globe.

The current configuration does not provide an environment conducive to adult learning. The infrastructure, utilities, technology, elevator, etc. are inadequate and inefficient. The foundational structure of the building is adequate for intended purposes.

No other alternatives considered. The need for this renovation is identified in the 2012 Academic Master Plan.

Description

Renovate science labs to include modernized lab station exhaust devices and fume hoods. Upgrade technology, lighting, HVAC system, and add an air cooled chiller for entire building. Renovate chemical waste storage areas to comply with DHEC and OSHA regulations. Replace 20+ year old roof.

The science lab safety exhaust systems in the science labs are outdated and not in compliance with safety and environmental regulations. The hydronic loop supplying water for cooling to Building 117 is greater than 50 years old. The acidic soil in which the pipe is buried (a former landfill) is eroding the water pipe creating routine breaks. An engineering evaluation has determined that it would be more cost effective to install a dedicated air-cooled chiller for Building 117 rather than installing new underground pipe system back to the Central Plant located in the center of campus. The roof has deteriorated to the extent leaks constantly occur across the roof.

No alternatives .Installation of new water pipe in excess of 1600 ft. is cost prohibitive.

Description

Renovate Bldg. 103 to modernize classrooms and labs and include latest instructional technology, seating, classroom layouts, replace outdated lighting, old ceiling grid system, new flooring in selected areas, modernize restrooms, replace exterior doors, replace roof and install a new air-cooled chiller. As part of the interior renovation, student engagement areas with WI-FI, Bookstore, lounge seating, new electrical receptacles for charging portable technology devices.

Bldg. 103 was last renovated in 1997-98. Restrooms need to be modernized with energy efficient fixtures and flush valves. Toilets and sinks are outdated and non-ADA compliant. Flooring is worn and in need of replacement in the majority of the building. The roof is 20+ years old and nearly at the end of its life cycle. Building is in need of new energy efficient lighting and fixtures. The HVAC system is inefficient and cannot meet the cooling demands of the building. Classroom technology layout, configurations of seating obsolete/outdated.

No alternatives considered as this building houses our academic engineering programs, business programs, and computer technology programs. This is one of the most heavily used and populated buildings on Barton Campus.

			70,000

Description

Renovate and reconfigure classrooms, upgrade technology, upgrade lighting, upgrade HVAC system to an energy efficient system to include new VAV boxes, controls, and an air-cooled chiller.

Classrooms were last renovated in 1997. The hydronic loop supplying water for cooling to Building 112 is greater than 50 years old. The acidic soil in which the pipe is buried (former landfill) is eroding the water pipe creating routine breaks. An engineering evaluation has determined that it would be more cost effective to install an air-cooled chiller to supply building cooling rather than placing underground piping system back to the Central Plant located in the center of campus.

No alternatives considered regarding classroom renovations. Installation of new water pipe in excess of 2000 ft. routing through a wooded area and under or through the primary road through campus and through two parking lots would be cost prohibitive.

Description

Construct a pedestrian bridge over the ravine to connect Student Success Center, Bldg. 102 and Engineering Technology, Bldg. 103. Landscape both sides of the ravine to create Unity Park, an accessible outdoor learning environment complete with amphitheater, walking paths, open area for recreation, and gathering space.

The current bridge is inadequate and the ravine creates a barrier to access part of the campus without a vehicle. This will make the campus pedestrian friendly. Access to the stream that is a tributary of the Reedy River promotes opportunities for many science programs to utilize for outdoor course work and other programs of study to conduct outdoor exercises and learning experiences. The variety of seating and gathering spaces will promote community activities as well as student activities such as the annual "Welcome Back Bash" and college sponsored events such as the annual employees' appreciation picnic.

No alternatives considered as this location is an ideal space and major component in the 2012 Academic Master Plan.

			10,000

Description

Construct an addition to Bldg. 302 of approximately 12,000 sq. ft. at the Benson Campus. The addition will be designed to meet energy efficient requirements, LEED/Green Globes, with the latest instructional technology. The addition will include classrooms, lab space, faculty offices, and student engagement areas with a copier for student use, a beverage and snack canteen, and a micro-mart for students to purchase notebooks, paper, flash drives, etc.

Continued growth of the Physical Therapy and Occupational Therapy curriculums dictate the need for additional classrooms and labs at the Benson Campus. Each year more and more students are enrolling in healthcare service fields in community colleges across the nation.

No alternatives were considered as the Physical and Occupational Therapy programs are only taught at the Benson Campus. Currently, we utilize portable classrooms to handle enrollment overloads. These portable classrooms are small, cramped, not energy efficient and are at the end of their useful life cycles.

Professional Services/Fees	2,500,000		42,900,000
	42,900,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Utilities	General Funds - Existing	Indefinitely	140,000
			140,000

Description

Construct a new LEED/Green Globe certified multi-story facility on Brashier Campus for automotive, motor sports, truck driver training, and diesel maintenance technology. The building will contain classrooms, faculty offices, and associated equipment and lab space. Classrooms and faculty offices will be located on the second floor. Lab areas will be located on the ground floor.

The new building will combine two facilities, Bldgs. 801, & 802, into one. Bldg. 801 may be renovated into classroom swing space. Bldg. 802 is ideal for storing Grounds maintenance equipment and supplies. The extra space may be utilized for storing surplus equipment awaiting collection by Surplus Property.

No other alternatives considered. The Brashier Campus has ample space for construction of this new complex and houses a full scale welding lab, a major component of the automotive and motor sports programs. Utilizing the existing welding lab in Bldg. 201 would save on construction and other costs.

			3,000

Description

Construct a second entrance/exit for the Northwest Campus. Repair and resurface the primary entry/exit road to the campus. Project will include new road, sidewalks, bike paths, curb and gutter, along with associated storm drainage systems.

The Northwest Campus has only one entrance/exit. In the event of an emergency, traffic could become congested impacting the ability of emergency vehicles to enter the campus. Should the existing road into the campus become impassible, faculty, staff, and students could become trapped on campus temporarily. The Greenville County Recreation facilities located on the Northwest Campus also use the only road entering the campus for teams and spectators.

No alternatives considered or available for a secondary entrance/exit.

Description

This project is to renovate the Main Building (which is more than 40 years old) and the Campus infrastructure on the College's Georgetown Campus. The building includes approximately 45,000 square feet of classroom, lab, student services, and faculty office space and is situated on approximately 26 acres of land. The scope of the project includes but is not limited to renovating/replacing roof and drainage systems, recladding the building exterior and improving weatherization features, replacing the roof/overhang on student walkways, installing irrigation systems and improving landscaping, resurfacing existing and constructing new parking and student pathways, improving storm water drainage and upgrading HVAC systems. The building is used to support more than 15 programs of study and continuing education and up to 750 students, and is the only facility dedicated to higher education in Georgetown County. Completion of this project will extend the useful lives of the buildings, improve energy efficiency, and defer the need for new construction. Because the building is currently being used, there should be no increase in operating costs. There may be cost savings due to energy improvements, but those cannot be measured with any precision at this time.

Description

This project is to renovate the interior of building 100 on the College's Grand Strand Campus. The existing building is 14,400 square feet consisting of a gymnasium (10,000 sq. ft.) and administrative space (4,400 sq. ft.). The College desires to renovate/repurpose this space by adding a second floor and converting the existing space into classrooms/laboratories.

Description

This project is to expand the Conway building 1400 which currently includes 5,000 square feet solely dedicated to Diesel Engine Training. Workforce needs and student interest in the program dictates expanding the existing footprint. Leasing of space was considered, but there is no viable space available of sufficient size/scope and location to meet our academic/instructional needs. The proposed expansion entails adding approximately 5,000 square feet to the existing structure for a total of 10,000 square feet.

Description

This project is to renovate/repurpose Building 600 and its infrastructure on the College's Grand Strand Campus. Building 600 is approximately 22,500 square feet of multi-purpose meeting space, classrooms, continuing education space, and faculty offices. The facility also includes a sizable food service preparation area. The building is 50 years old, not in compliance with current ADA guidelines, lacks modern energy efficient systems, and otherwise not conducive to modern instructional techniques and teaching methods. This building supports more than 3,000 students weekly who attend the Grand Strand Campus. New construction was considered, but is not deemed economically viable or otherwise cost effective. Leasing of space is another option, but there are no spaces available of sufficient size/scope/design to meet our academic/instructional needs. Note: This is a renovation of an existing building currently being used. As such, there should be no material changes in operating costs. There may be some cost savings due to energy improvements, but those cannot be accurately measured at this time.

Description

The college seeks to acquire 30,000 square feet and not less than 5.0 acres of land to support future growth and expansion of its Conway Campus. The land/building is desired to be within 3 miles of the existing Conway Campus. The College has limited existing property on which to expand and to otherwise support its ever-increasing enrollment base. Over the past 10 years, HGTC has been the fastest growing technical college in the state, and today supports over 7,500 students and over 65 programs of study. The Conway Campus supports approximately 4,000 students on a weekly basis. The College has researched leasing property, but very few if any suitable properties are available.

Utilities	200,000	Previously Approved	
	200,000	Other Funds - Carryforwards	200,000
			200,000

Description

A recent OSE code analysis determined that L. S. Brice School will have to be up-fitted with a comprehensive fire suppression system prior to opening. A previous survey determined the water tower supplying the existing fire suppression systems is in disrepair and basically unusable. This project will repair and/or replace existing fire hydrants and associated piping as well as provide the means for county water to supply the existing campus fire suppression systems including the L.S. Brice School building when renovated.

			150,000

Description

The Wilderness facilities are an incredible resource here at JDLH. They have multiple possible uses in the coming years including serving as initial classrooms in year one and as an Education Center in future years. The buildings are in good shape structurally but require cosmetic upgrades as well as new HVAC units that have outlived their usefulness. This project will replace rotten wood, paint, upgrade kitchen, replace HVAC units, gutters/ downspouts, restrooms, decks etc.

Description

Bid on this historic 15,000sf structure, which was erected in 1938 with W.P.A assistance and is listed on The National Register of Historic Places, came in in over \$400,000 of approved budgeted amount. The tile roof has been in disrepair for years and water is currently pouring into the interior. Interior damage including rot, mildew and mold are increasing at an alarming rate. Immediate action is required in order to salvage this structure. This project will replace the existing tile roof and stabilize the structure until it can be renovated in the future. If it is determined that the agency has to replace with clay tile then costs are estimated to be \$800,000.

Description

Lander University considers the School of Nursing as the signature program. The School of Nursing is located in Barratt Hall. Barratt Hall is a single story, 24,000 sq. ft. masonry building built in 1967. The nursing program has outgrown Barratt Hall. Freshmen students are being denied acceptance to the program due to the physical limitations of the building.

Lander University is proposing constructing an addition to Barratt Hall that would be constructed on the south end of the building. The addition would be multi-story to compensate for the allowable footprint of the proposed building. The addition would consist of smart classroom technology classrooms, lecture space, nursing laboratories, nursing inter-action laboratories with programmable manikins, and faculty offices. The existing building interior and exterior will undergo a renovation. LEED Silver Certification would be mandated due to the size of the new construction.

The university has evaluated all alternatives for nursing classrooms and laboratories and concluded there is insufficient campus space elsewhere for the Nursing program classrooms and/or laboratories.

			99,950

Description

The Grier Student Center is a three story, 60,000 sq. ft. masonry building built in 1979. At the time of construction, the student enrollment was 800. Today's enrollment of 2,900 represents a 362% increase over the original design capacity of this building, leaving the university in desperate need of additional space to accommodate our current and future students. Lander University is proposing constructing a multi-story addition to the Grier Student Center. The addition would consist of smart classroom technology classrooms and lecture halls, a Student Career Center, meeting space for student organizations. LEED Silver Certification will be mandated due to the size of the new construction. Lander University has evaluated all additional campus space and has concluded there is not sufficient space elsewhere to re-program for this effort.

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	Other Funds - Existing	Indefinitely	13,500
Utilities	Other Funds - Existing	Indefinitely	46,800
			60,300

Description

Lander University is requesting funds to re-purpose the existing Jackson Library into a multi-curriculum academic classroom building. Once the future Library Information Commons construction project has been funded and the construction is complete, the information accessing function will be housed there. The Jackson Library will then have two vacant floors: Main Level and Third Floor. The first floor will remain as the home of the University Information Technology Center. The 65,255 square foot Jackson Library, constructed in 1976 is three story, has brick veneer and is ideally located as a central campus classroom. The architectural programming will determine the exact floorplan to meet the needs of the university, ADA accessibility will be ensured, the existing elevator will be modernized, the HVAC will be modernized, and the life safety systems (fire alarm and sprinkler) will be updated to meet the needs of the new floorplan.

Lander University continues to experience enrollment increases and the re-purposing of an existing building, at approximately \$140/sq. ft. is more feasible than the expenditure of undertaking new construction.

Description

Lander University is requesting funds to design and construct a multi-floor Student Housing Complex. The construction will be located on existing University owned property, within a few minutes' walk of the campus center. The initial floorplan design anticipates the traditional two person room sharing a restroom with the adjacent room. Each room will have room for the two beds, desks, wardrobes, and a small common space for relaxing. The building will be equipped with elevators, electronic card access, and security cameras to ensure maximum student safety. The building will be sprinklered and have a modern Fire Alarm Monitoring System. The floorplan will allow for homework/ study rooms, and entrance lobby, and public restrooms. The site's existing parking will be improved and expanded. The entrance lobby will allow access to a retail center, where students will be able to access food/drink and services. The architectural programming will determine the exact floorplan. This initial budget request accommodates:

Student Housing - 70,000 sq. ft., @\$250/ sq. ft. = \$17,500,000 (200 beds)

Description

Lander University is essentially a land-locked campus, surrounded by residential communities and slight exposure to the commercial thoroughfare through the center of Greenwood, SC. Lander University is currently experiencing continued student enrollment increases. As a result, the university is becoming creative in the arena of campus master planning. Lander University is seeking funds for the construction of a 5 story, 145,000 square foot , 450-500 vehicle parking garage with additional food service/campus dining considered for the top floor. The surrounding residential community zoning standards will limit the actual garage size, maximum garage height, design appearance and vehicle accessibility. The garage design will ensure ADA accessibility, elevator accessibility, student security and the improved approach to campus.

Lander University has evaluated all campus space utilization options and has determined that with the construction of the elevated parking garage, existing asphalt parking lots can be master-planned for future academic classroom buildings.

Description

Lander University has devoted tremendous resources to asphalt repair. The existing asphalt pavement has been routinely patched and repaired to make the surface useable. The university is now seeking \$3,564,000 to initiate a comprehensive re-paving project across campus. Lander University's geographical location lends itself to possessing soils that are a clay composite and various strains that do not lend themselves well to compaction. On prior asphalt repair projects, the presence of unsuitable soils have inflated a project's base bid by an additional 30%. The university is now well versed in the application of geo-fabrics to bridge poor soils and the technique of under-cutting poor soils and replacing with stone. Both of these techniques will be inter-twined in the corrective actions for all future paving projects. Lander University has implemented an annual asphalt repair project, however, the asphalt life has been exceeded in most parking lots across the campus.

Description

DESCRIPTION: SCCJA has several roofs need repairs in order to stop leaks. The buildings included in this project are: Building 31, our 24-year old Warehouse, has a persistent leak in the seamed metal roof that we have been unable to stop. Building 8, our 34-year old IT & Office Building, has a leak in the metal roof. Application of a spray-on roof coating to address these issues is planned. On our 37-year old Weapons Range Complex, we propose to re-shingle the roof & replace the translucent panels on the roof of the Rifle Deck Building 113, & Ranges 1, 2, & 3. Estimated total construction costs \$296,527. JUSTIFICATION: The translucent panels on the Rifle Deck were last replaced in early 2000. The panels on Ranges 1, 2, & 3 were last replaced in 2004. All panels are hazy, brittle from the sun, & the shingles are in dire need of repair. Repairs to Building 31 have deteriorating seals that are wearing out from increased age, maintenance. Re-coating is required to prolong the life of the roof. ALTERNATIVES CONSIDERED: Change out roof fasteners & seals. Repairs are well beyond the ability to be repaired by SCCJA staff. Damage is due to age, extreme weather, & storms. Our operational revenue from fees & fines does not support large projects due to its continuous yearly decline. Other funds have been identified to carry out this project expense.

Maintenance and Repairs	Other Funds - Existing	Indefinitely	30,000
			30,000

Description

DESCRIPTION: This will be a 2500kW generator installed w/all connectors, switches & fuel lines included in the overall price. Blanchard/Caterpillar & Dominion Energy have worked on this estimate & plan over a year to arrive at this quote. JUSTIFICATION: Since 1989 the SCCJA has been utilized as a staging area for First Responders during statewide emergencies, hurricanes, and/or floods. SCCJA provides 550 beds, hot showers, meals, secured parking for staging emergency assets on site & classrooms to utilizes as command centers for FEMA teams & Emergency First Responders. Should the Academy lose electrical power it would immediately become uninhabitable (loss of HVAC, lights & inability to prepare meals). The facility interior would become dark, negating use of classrooms/command centers. ALTERNATIVES CONSIDERED: No other viable options exist. One FEMA Team explored the feasibility of installing temporary generators, quickly discounting as impractical due to time required in midst of emergency situations. They concluded permanent installation is the only practical way to guarantee uninterrupted service & continued availability of the Academy for emergency responder support. This equipment must be purchased through an authorized vendor w/installation & connectivity for our current systems to work in unison that fees & fines don't support.

Description

DESCRIPTION: The scope of this project will be to resurface various driveways and parking areas throughout the Academy.
 JUSTIFICATION: Due to the Extreme heat elements of the state of South Carolina and yearly usage by thousands of students, staff, the public, delivery trucks, and utility trucks, pavement problems have been neglected for too many years and now requires attention and significant repairs. ALTERNATIVES CONSIDERED: No other viable options exist. Our operational revenue from fees and fines do not support large projects due to its continuous yearly decline.

			302,500

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

DESCRIPTION: The scope of this project will be to replace the current stationary target system with a movable target system.
 JUSTIFICATION: This range area was renovated in 2002 and the target system was taken down. The FBI was going to update and supply all funding to replace this system with a new one; however, the recession hit and the FBI abandoned all plans. ALTERNATIVES CONSIDERED: No other viable options exist. Our operational revenue from fees and fines does not support large projects due to its continuous yearly decline.

Description

DESCRIPTION: The scope of this project will be to renovate all dormitory restrooms for the first time since the Academy opened in 1972, consisting of the Academy's North, East, West, and West Annex Dormitories, which includes approximately ninety-five (95) restrooms. JUSTIFICATION: These dormitory restrooms have never been renovated. All dorms are used by literally thousands of law enforcement students and emergency response personnel requiring housing while on active duty, or as students. ALTERNATIVES CONSIDERED: No other viable options exist. The Academy staff has handled most repairs over the years, but all dormitory restrooms now warrant a total overhaul. Our operational revenue from fees and fines does not support large projects due to its continuous yearly decline.

	50,000		50,000

Operating Budget Impact	Fund Group	Recurs	Amount

Description

DESCRIPTION: The scope of this project will be to add additional underground drainage piping to carry additional storm water away from the building. JUSTIFICATION: The storm water drainage system in front of the main Academy building has proven inadequate to handle storm water run-off since our flat roof was replaced with a pitched metal roof, thus changing the storm water run-off load. During heavy rains, three classrooms will flood with water which is not efficiently carried away from the building by the existing storm water drainage system. ALTERNATIVES CONSIDERED: No other viable options exist. Our operational revenue from fees and fines does not support large projects due to its consistent yearly decline.

Description

Our 2014 Strategic Plan and 2015 Master Facility Plan identified the need to create common spaces to promote the integration of students and faculty in common classrooms, study spaces and learning labs. Current situation is that we are 'college-centric' in these spaces. The benefit of integrating these spaces is to promote a wider and deeper understanding of all our health professions and also create interprofessional relationships that yield more creative and innovative ideas. The scope of work included in this initiative is the renovation of the Colbert Library to convert outdated library space to current learning spaces and offices for faculty; renovation of classrooms in the current Basic Sciences Building; and an addition to the Basic Sciences Building which will allow our College of pharmacy to relocate from its current location. Project expected to take over 4 FY's to complete. This project received Phase 1 approval by CHE/JBRC/SFAA. Estimate submitted with A1 attached.

	4,150,000		

Description

Capital Investment required to renovate relocated research labs in the Institute of Psychiatry. The College of Medicine continues to grow to support the clinical mission and offices are needed to support this growth. This project will convert aging laboratory space on 2nd and 3rd floors of the Institute of Psychiatry to new to clinical offices. This renovation aligns with the College of Medicine's efforts to reduce its off campus lease and co-locating faculty whenever possible to ensure we meeting our clinical, research and teaching goals in most cost effective means possible.

Professional Services/Fees	450,000		4,500,000
	4,500,000		

Description

Project will renovate approximately 14,500 square feet of existing lab space on the 3rd floor of the Hollings Cancer Center. The project will create a central core lab facility consisting of lab spaces used by all research investigators housed on the 3rd floor. This will rearrange the existing lab space to provide increased investigator capacity and increased efficiencies of lab operations. The work will be implemented in phases to limit disruption to the ongoing research currently being performed on the floor. Current space is outdated and less efficient (renovation will accommodate more investigators in same amount of space). The goal is to realize research operational efficiencies and improve collaboration by consolidating core functions into one centralized space. This project has received phase 1 approval by CHE/JBRC/SFAA.

Labor Costs	50,000		2,500,000
Professional Services/Fees	125,000		
	2,500,000		

Description

This project will create a High Risk Infectious Disease (HRID) unit in the Clinical Sciences Building (CSB). This specialized medical unit will allow for isolation treatment for highly infectious diseases. This unit will be constructed in approximately 3500 square feet of vacated space on the first floor of the CSB. This HRID unit will be one of the few specialized units in the country, and the only one in South Carolina, equipped to address highly infectious diseases. When not in active use for patients, the space will be used for mock training to prepare providers to handle high risk cases. The unit will be constructed with a federal grant from the Office of the Assistant Secretary for Preparedness and Response (ASPR). This request is for approval of a budget increase. Bids came in significantly over the schematic design estimate.

Description

Project will renovate existing laboratory to better provide forensic services to State & Local Municipalities. MUSC provides lab services to local/regional law enforcement and this is capital renewal of these labs. Scope will include gut of existing space and rebuild with lab quality casework, fume hoods, gases and renewed HVAC and electric services. There has not been a feasibility nor design yet completed for this project.

	2,500,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	Unidentified	Indefinitely	_____

Description

The project is a complete interior renovation and reallocation of spaces within the 11,275 square foot Learning Resource Center located in the Academic Center on the Airport Campus. Function of the space has dramatically changed since it was built in 1989 and so the existing space will be repurposed to meet the current and future needs for student networking and collaboration. This will require extensive computer and electronic access and collaborative learning spaces. Renovation of the center is consistent with the college's Master Facilities Plan and will address some existing maintenance issues. CHEMIS data indicates the Airport Campus exceeds utilization standards. Usage indicates a growing need for such space. Both faculty and student surveys report that the center is inefficient at our current enrollment level. With today's advanced information technologies there is an inherent change in the space's purpose and the current center doesn't meet today's student needs. Consideration for building a new center was discarded because repurposing the space is the most financially prudent method for meeting student needs in a Learning Resource Center.

	8,100,000		8,100,000

Operating Budget Impact	Fund Group	Rekurs	Amount
Maintenance and Repairs	Unidentified	Indefinitely	

Description

This project is to completely renovate the 31,000 square foot Granby Hall building on the Airport Campus which was constructed in 1978. Renovation is consistent with the Master Facilities Plan, and would address deferred maintenance issues. This facility houses the HVAC and Commercial Graphics Industrial Technology programs, along with ten general purpose classrooms. This renovation will allow for a reconfiguration of space that is more appropriate for the programs as they have significantly evolved over the years. The renovated space would be up-fitted to feature state-of-the-art instructional technology and make student instruction more relevant to current employer needs, resulting in a better prepared workforce. Anticipated relocation of the welding program out of the building will allow for phased renovation which is more prudent than building replacement.

Equipment and Materials	6,000,000	Other Funds - Foundation Donations and Contributions	5,000,000
Interior Renovations	5,250,000	State Funds - Appropriations	10,000,000
Professional Services/Fees	1,900,000		15,000,000
Utilities	1,100,000		
	15,000,000		

Description

This project of \$15.0 million will complete the renovation of the museum. The "Windows to New Worlds (WTNW)" initial renovation (\$23.5 million) was opened in August of 2014 and included the addition of a planetarium, 4D theatre, observatory, telescope gallery and guest service and rental enhancements. This project will transform the existing other floors of original permanent exhibits (75,000 square feet) to the same standard of quality as the WTNW components. No additional operating costs are needed. The construction would be staggered over years so the museum would not close during the renovations as we would do one section at a time. The State Museum has received a \$3.0 million supplemental appropriation for 2019.20 which along with a \$1.5 million contribution from the SCSM Foundation will total \$4.5 million to begin the project. In 2019.20, the museum will initiate Phase I pre-design of the project which will include the selection of a design team and planning the entire project via space programming, space schematics, facility surveys, and site/gap analysis. This process, once approved to begin, would be completed by June 30, 2020. The museum will identify in this pre-design process which section of the project to proceed to Phase II: Full Design and Construction in 2020.21 utilizing the remainder of the committed \$4.5 million. Upon careful analysis of the SCSM's current exhibit program, the museum's exhibits are in need of renovation to better represent its expanding collection, replace outdated exhibit delivery systems and bring a 1980's building infrastructure into the new millennium. Renovated galleries will allow for better representation of its rich history and the lessons we can learn from it. Today's audiences expect to access information through a variety of mediums, ranging from dynamic displays to engaging interactives to innovative media presentations. The building's flooring and wall treatments are showing their age and an inefficient lighting system should be replaced with a more efficient and cost-effective LED system offering better conditions for artifact preservation. Finally, the galleries are in need of updated environmental graphics, signage and way-finding that complement the design language of the recent Windows to the World expansion.

Description

Northeastern Technical College has received legislative approval to reauthorize \$3.5 million of appropriated state funds (Proviso 118.16, FY16-17). NETC will relocate departments, renovate existing space for critical industry training and possibly construct a new maintenance facility. The maintenance department is located in the Academic Building 600. This space will have to be relocated to the 700 Building while renovations for transformation of the Building 600 are underway. These renovations will transform the Building 600 into an industrial training center to be focused on machine tooling, CNC operations, production operators, and apprenticeship programs for machine tooling. Also, auxiliary services and the student lounge would vacate Academic Building 200, thereby, freeing up this space for industrial training. Auxiliary services would relocate to the current library space, in Academic Building 500. Renovations are required in this building to house auxiliary services and the student lounge. Renovations to the Building 300, 400, 700, and/or 800 are also possible, if fund permit. Possible maintenance building project will include a pre-engineered building (5,000 square feet) that would be constructed for maintenance, allowing them to permanently relocate from the Academic Building 600. Attached are preliminary designs and estimates of renovations to Building 500, Building 600, and construction of the Maintenance Building. The NETC Area Commission approved \$160,000 from Reserves for this project.

Description

Phase II of the project includes renovations and construction for an EMT and Nurses Training area, an SC Works co-location, a community room with a warming kitchen, and a space for Diesel Technology, Mechatronics, and Automotive. The current lobby serves as a reception area and entrance to one side of the building, and is currently being used for NETC classes. Modifications are needed to this space in Phase II so the lobby can service both sides of the building. Phase II also includes two new construction additions: approximately 8,000 square feet in the Diesel Technology area, and 4,000 square feet in the Advanced Manufacturing area. Phase II will also consist of renovations for a warming kitchen, as well as for classrooms and labs in Allied Health, Automotive, and Advanced Manufacturing and Fabrication Technologies training areas.

Description

This project is needed to address several small improvements to the college including, but not limited to: roof replacements, restroom renovations, HVAC replacement, and security renovations. These renovations are geared towards community specialization and abandoning the concept of duplicating programs from the main campus. This project is needed to address maintenance issues that are deferred due to other institutional priorities.

If attainable, student safety will be considered in the design with single entrances/exits.

Description

The Agency requested funding that was approved (SFY20 Budget) for acquiring property rights (sufficient to mitigate encroachments on the runway clear zones):

The Agency does not expect recurring/operating costs with this action. The Agency's goal is to return the property to its natural state to meet United States Air Force (USAF) clear zone criteria. Future funding may be requested for the demolition if demolition is determined to be the best course of action. Currently, one of the most significant issues affecting the Clear Zone (land use control area at each end of runway) at McEntire Joint National Guard Base (JNGB) is a non-operating steel mill located adjacent to the Base. This and other encroachments impact ongoing operations, and may impact the USAF's future F-35 basing decisions as well as future mission sustainability/viability for McEntire JNGB. In addition, the SC Air National Guard must submit a waiver request to National Guard Bureau for existing Clear Zone issues in order to continue the on-going operations of its 169th Fighter Wing. Although an USAF funded study determined that resolving clear zone issues was the top land restriction priority, the USAF is unable to fund the purchase of this land for this purpose. Plan includes Professional Services (5%) for Site Surveys, Easements, Environmental Assessments, etc.

Description

The Agency requests funding for:
Construct a new 59,933 SF National Guard Readiness Center that supports the training, administrative, and logistical requirements for the SCARNG. This facility is planned to be built on Federal land at Joint Base Charleston. This facility is required to provide a training facility that accommodates the modernization and transformation of their equipment and the performance of their mission to support the Strategic Depth of the Army and unit training in the Army Modular Force configuration. This facility will house 10 authorized full-time employees and 230 M-Day Soldiers.
Currently the units do not have a permanent facility, and are assigned to a leased facility that is 61,500 SF and costs \$738,000 per year. The leased facility does not comply with the criteria of NG Pam 415-12 dated 25 January 2015. It does not meet Anti-terrorism/Force Protection (AT/FP) standards. The leased facility was not designed as a Readiness Center so the units must adapt to the existing design. No other SCARNG Facilities are suitable and available nearby. No other facilities are available to house the new units.

Description

The Agency requests funding for significant repairs/replacements at the ten (10) Readiness Centers (aka; Armories) that are in the worst conditions of disrepair of the 63 RCs (chosen based on the A/E's assessment/design): Greenwood, Lancaster, Greenville, Florence, Sumter, Clemson, Laurens. Union, Hartsville, Easley. Each of these facilities have varying issues that need to be repaired or renovated, but the major cost items include; Roof, HVAC Systems, Exterior Windows, Doors & Storefront Systems, Latrines, Kitchen, Lighting, Fire Suppression, Electrical Systems, and Site Improvements. In accordance with Federal law, the State of South Carolina is obligated to National Guard Bureau to provide operation and maintenance funding for these facilities as long as there is a federally recognized unit assigned to the facilities. The facilities are in poor condition, undersized, do not meet current building codes, nor current Security & Force Protection standards. This agency has relocated and/or consolidated force structure to other RCs and closed the sub-standard RCs that could be closed. NOTE: This is an Annualized Project. The project total for this year is \$16,000,000 (SFY19) + \$7,346,000 = \$23,346,000, and will increase over the next 4 years to equal a total of \$45,524,000 in the final year (SFY23). 			3,000

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Renovate and expand existing the Female Latrine in various Readiness Centers across the state. Scope of work includes renovating existing female latrine and constructing additional authorized space to include new utilities and fixtures, along with any required mechanical, electrical and plumbing work.

Per NG Pam 415-12, the assigned unit(s) are authorized 2,000 SF of latrine space. Army regulations have been amended since the construction of the majority of the SCARNG's RC opening up additional positions to female Soldiers thus creating a deficit of female space at most SCARNG RCs.

No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$250,000 (SFY19) + \$600,000 = \$850,000, and will increase over the next 4 years to equal a total of \$2,650,000 in the final year (SFY23).

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Demolish an existing WWII Era barracks and Construct a replacement 3,200 SF TT ENL Barracks at the two Training Sites listed below. Each Barracks building will be of permanent Construction with a finished interior, including MEP systems, a Latrine with showers, urinals, toilets, sinks and washer/dryer connections. Installation of utilities and the extension of utilities to the nearest service lines. This project will replace one barracks at each site per year.
 - McCrady Training Center (MTC) (#3511, #3510, #3501, #3502, #3934).
 - Clarks Hill Training Site (CHTS) (#4423, #3334, #4723, #4722, #4721).

The barracks to be replaced are no longer sufficient for the housing of Soldiers; the structures are not insulated properly; the roofs are cost prohibitive to repair; no latrine; single pane windows; and old/energy inefficient light fixtures. Due to their age and condition, the existing barracks no longer support the SCARNG's mission. No other suitable facilities are available. This is an Annualized Project. The project total for this year is \$1,414,416 (SFY19) + \$1,326,416 = \$2,740,832, and will increase over the next 5 years to equal a total of \$8,046,496 in the final year. Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Harden the Primary and one (1) Secondary Entrance of each facility to Level 5 Ballistic properties. This work includes adding Conduit & CAT-6 Cables for Aiphone, Access Card Reader, Security Cameras, and Electronic Locking Mechanism w/ 110V Power Supply & Electronic Hinge for Door Position.
2. Balance of Entrances to be changed to Exit Only (locked from the exterior) with Audible Alarm hardware.

This applies to 55 Readiness Centers across the state.
 Required per NGB Directive I&E-HPG.2018 to improve the Security of the SCARNG's Stand-Alone Facilities (SAF). NGB is funding this project 100% Federal for construction/renovations, but Maintenance and Repair will be per the normal agreement per facility (50%/50%).

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Upgrade the SEOC's 1990's-era analog audio/visual distribution system in order to provide facility-wide access to information feeds within at least four (4) designated breakout areas. Enhance projection capabilities in the SEOC and supporting rooms.
2. Create a digital, mobile-device and laptop friendly environment in SCEMD's Training Room, including adding device charging capabilities, enhanced networking, and audio/visual system improvements.

In order to mitigate the shortage of workspace for the increasing staffing requirements, SCEMD has been forced to assign personnel to disconnected work areas to address response planning, intelligence collection and analysis, and logistical planning. Those personnel need access to the information feeds that are currently only available in the EOC. The SEOC's existing analog distribution system cannot utilize digital information without downgrading/degradation to an analog signal, and is also unable to distribute additional feeds to overflow/breakout areas. The Training Room houses the Public Information Phone System (PIPS) call center, and the changes will improve setup time and overall functionality. No other suitable facilities are available.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Construct a new 1200 SF Kitchen addition at various Readiness Centers across the state. The existing kitchens at these RCs do not meet current building code requirements; are not in compliance with Occupation, Safety and Health regulations and are not adequate to meet the needs of the assigned units. Adding the Kitchen Additions to the RCs will rectify most of these issues. No other suitable facilities are available.

Additional Professional Services/Fees were requested to allow the Design of approximately 5 Kitchens in the first year, thus creating "shelf-ready" projects for the last 3 years.

This is an Annualized Project. The project total as of this year is \$904,089 (SFY19) + \$1,633,058 = \$2,537,147, and will increase over the next 5 years to equal a total of \$8,806,699 (SFY24).

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Install a Back Up Generator and associated Switch Gear for the Server Room.
2. Alterations to the existing POV Parking Lot to improve Traffic Circulation, Force Protection Standoff Distance, and add Anti-Vehicle Barriers.
3. Demo the existing four (4) sets of Store-Front Doors / Windows, and in-fill the openings with exterior brick veneer and CMU to match the existing walls, along with three new single Hollow-metal Doors (1 Access-Controlled Entrance, 2 Exit Only).
4. Alter the existing Truck Entrance Exterior Gate to allow a wide enough opening for large tractor-trailer trucks to enter, and also provide Dumpster Pads/Coral.

The Army Air Missile Defense Command (AAMDC) that is stationed at the Anderson RC has Federal Missions that require continuous Operational and Information-Technology Support, increased Security & Force Protection. Also, some changes to the building are needed to increase its efficiency and suitability of the existing Readiness Center.

No other suitable facilities are available or would cost far more to alter to meet the requirements.

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Replace the existing inadequately sized Storm Water System Outfall with new stormwater pipes and boxes with backfill to repair the erosion at existing SW outfall channel.

Stormwater has eroded the existing channel along the South side of the property and cut a 25' deep gully at the stormwater outfall that extends for approximately 100'. The above repairs are required to correct existing problems and prevent any future erosion on the site.

No other suitable facilities are available.

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Provide all labor materials and equipment to demolish the existing armory to include asbestos and lead abatement. Contractor will be responsible for the off-site disposal of all demolished debris and any asbestos and lead containing materials in accordance with SCDHEC requirements.

The McCormick Armory was constructed in 1960, and due to a lack of substantial funding, it is in a failing condition. The SCARNG has re-assigned the units to another Readiness Center due to the armory's unusable condition. The McCormick Armory was identified in the Master Plan to be demolished and the Plan has been approved by the Adjutant General. It has been determined that it is uneconomical to repair the facility for effective and long-term use.

No other suitable facilities are available.

Description

The Agency requests funding for all labor, materials, and equipment to:
 1. Provide all labor materials and equipment to repair damage from extensive water intrusion and winds to the existing Sumter, Marion, Mullins and Manning Readiness Centers.

On September 12, 2018, Hurricane Florence made landfall in New Bern, North Carolina. The Pee Dee Region of the State of South Carolina experienced Hurricane Force and Tropical Storm Force winds, 20 inches of rain and flooding. The President declared a state of emergency for the State of South Carolina and ordered federal aid to supplement state and local recovery efforts. Pee Dee Region Readiness Centers suffered significant damage from the hurricane, which is impacting South Carolina National Guard mission readiness and soldier morale. No other suitable facilities are available.

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Complete LED retrofit of McCrady Training Center (MTC) Building 3800- Regional Training Institute (RTI). The Agency will provide all fixtures, ballast, and bulbs needed. Contractor provides all labor and additional material needed to replace all existing lighting with high efficiency LED lighting.

The energy upgrades listed above will reduce energy consumption by the South Carolina Army National Guard. It will assist with compliance of Executive Order 13154, The Energy Independence Act of 2007 as well as Executive Order 13834 Efficient Federal Operations Act of 2018. In addition to other Federal and state statues and regulations. The Life Cycle Cost Analysis was conducted using a standard spreadsheet and data tables developed and provided annually by the National Institute of standards and Technology. Combined Resource Savings: 376,422 kWh/year; Cost Savings: \$48,934.80/year; Implementation Cost: \$255,200; Simple Payback Period: 5.22 years; SIR: 2.4

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Demo what remains of the existing Personally Owned Vehicle (POV) Parking Areas, either completely or in damaged areas, re-compact Subgrade, apply Asphalt Overlay, and re-stripe. Work will be completed at various armories across the state with repairs per armory based on conditions. POV parking areas at numerous armories are in disrepair and/or complete failure and cannot be utilized for Soldier or Public parking. Repairs and or replacement of the parking surface will provide improved parking. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$175,500, and will increase over the next 4 years to equal a total of \$877,500 in the final year (SFY24).

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Mill/Remove approximately 8,000 SF of existing Asphalt Layer (2.5") on Taxiway at its connection with Runway 14-32. Repair/Replace existing damaged Concrete Slab Base. Overlay with new Asphalt for the full width (150') for a distance of 477' and Re-Stripe. Work will also include minimal grading (10' max) along the edges of the Taxiway for the full length, to remove grass and dirt that prevents proper Storm Water runoff the runway.

An evaluation of the existing Taxiway indicates severe cracking of the asphalt overlay for the entire length of Runway 05-23 to Runway 14-32. Centerline Patching of the existing cracks has been completed, however, this has not resolved the same issues associated with the outer portions of the Taxiway. Previous asphalt overlay occurred in the 1960s. As the Taxiway receives both Rotary and Fixed Wing Aircraft, improvements to the entire width is required to reduce potential impact to the aircraft Engines.

No other suitable facilities are available.

Description

The Agency requests funding for significant repairs/replacements at the ten (10) Readiness Centers (aka; Armories) that are in the worst conditions of disrepair of the 63 RCs (chosen based on the A/E's assessment/design): Greenwood, Lancaster, Greenville, Florence, Sumter, Clemson, Laurens, Union, Hartsville, Easley. Each of these facilities have varying issues that need to be repaired or renovated, but the major cost items include; Roof, HVAC Systems, Exterior Windows, Doors & Storefront Systems, Latrines, Kitchen, Lighting, Fire Suppression, Electrical Systems, and Site Improvements. In accordance with Federal law, the State of South Carolina is obligated to National Guard Bureau to provide operation and maintenance funding for these facilities as long as there is a federally recognized unit assigned to the facilities. The facilities are in poor condition, undersized, do not meet current building codes, nor current Security & Force Protection standards. This agency has relocated and/or consolidated force structure to other RCs and closed the sub-standard RCs that could be closed. NOTE: This is an Annualized Project. The project total for this year is \$23,346,000 (SFY19 & 20) + \$6,726,000 = \$30,072,000, and will increase over the next 3 years to equal a total of \$45,524,000 in the final year (SFY23). Reference E240-P-2021-1061.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Renovate and expand existing the Female Latrine in various Readiness Centers across the state. Scope of work includes renovating existing female latrine and constructing additional authorized space to include new utilities and fixtures, along with any required mechanical, electrical and plumbing work.

Per NG Pam 415-12, the assigned unit(s) are authorized 2,000 SF of latrine space. Army regulations have been amended since the construction of the majority of the SCARNG's RC opening up additional positions to female Soldiers thus creating a deficit of female space at most SCARNG RCs.

No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$850,000 (SFY19&20) + \$600,000 = \$1,450,000, and will increase over the next 3 years to equal a total of \$2,650,000 in the final year (SFY23).

Maintenance and Repairs	Federal Funds - Existing	Indefinitely	750
			1,500

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Replace the six (6) HVAC units. The units and their cooling sizes are: SHP-2 (3 ton), SHP-3 (5 ton), SHP-9 (5 ton), SHP-10A (3.5 ton), SHP-10B (4 ton), and SHP-14 (3 ton).

The HVAC Units servicing SCEMD's main facility were manufactured in 1999 and are nearing the end of their serviceable life. These 20+ years old HVAC units all use R-22 refrigerant. Since R-22 is being phased out and costs are increasing, we need to modernize our HVAC infrastructure for R-410A, a safer and compliant refrigerant. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$150,000 , and will increase over the next 3 years to equal a total of \$472,875 in the final year.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Demolish an existing WWII Era barracks and Construct a replacement 3,200 SF TT ENL Barracks at the two Training Sites listed below. Each Barracks building will be of permanent Construction with a finished interior, including MEP systems, a Latrine with showers, urinals, toilets, sinks and washer/dryer connections. Installation of utilities and the extension of utilities to the nearest service lines. This project will replace one barracks at each site per year.
 - McCrady Training Center (MTC) (#3511, #3510, #3501, #3502, #3934).
 - Clarks Hill Training Site (CHTS) (#4423, #3334, #4723, #4722, #4721).

The barracks to be replaced are no longer sufficient for the housing of Soldiers; the structures are not insulated properly; the roofs are cost prohibitive to repair; no latrine; single pane windows; and old/energy inefficient light fixtures. Due to their age and condition, the existing barracks no longer support the SCARNG's mission. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$2,740,832 (SFY19&20) + \$1,326,416 = \$4,067,248, and will increase over the next 5 years to equal a total of \$8,046,496 in the final year. Reference E240-P-2021-1063.

			7,000

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Construct a new 1200 SF Kitchen addition at various Readiness Centers across the state. The existing kitchens at these RCs do not meet current building code requirements; are not in compliance with Occupation, Safety and Health regulations and are not adequate to meet the needs of the assigned units. Adding the Kitchen Additions to the RCs will rectify most of these issues. No other suitable facilities are available.

Additional Professional Services/Fees are requested to allow the Design of approximately 5 Kitchens in the first year, thus creating "shelf-ready" projects for the last 3 years.

This is an Annualized Project. The project total as of this year is \$2,537,147 (SFY19-20) + \$1,633,058 = \$4,170,205, and will increase over the next 4 years to equal a total of \$8,806,699 (SFY24). Reference E240-P-2021-1066.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Demo what remains of the existing Personally Owned Vehicle (POV) Parking Areas, either completely or in damaged areas, re-compact Subgrade, apply Asphalt Overlay, and re-stripe. Work will be completed at various armories across the state with repairs per armory based on conditions. POV parking areas at numerous armories are in disrepair and/or complete failure and cannot be utilized for Soldier or Public parking. Repairs and or replacement of the parking surface will provide improved parking. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$175,500 (SFY20) + \$175,500 = \$351,000, and will increase over the next 3 years to equal a total of \$877,500 in the final year (SFY24). Reference E240-P-2021-1065.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Replace asphalt Shingle Roofs with Standing Seam Metal on multiple SCARNG buildings across the state. Initial group of buildings are listed below. This project will replace the Roofs on 1-2 Buildings per year.
 - McCrady Training Center (MTC) (bldg #3908, #3909, #3850, #3852).
 - Clarks Hill Training Site (CHTS) (bldg #6140, #5001, #5005, #5002).

These Roof Replacement projects will extend the life of these facilities by 25+ years. Replacing with asphalt Shingles will be less effective.
No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$409,500 (SFY-20) + \$409,500 = \$819,000, and will increase over the next 4 years to equal a total of \$2,047,500 in the final year (SFY24).

Description

NOTE: This project was originally planned for Construction in 2015, then it was changed to 2017, but NGB has subsequently ordered the design to be paused and delayed its construction until 2022. NGB should authorize the completion of the Design 18-24 months prior to FY2022.

The Agency requests funding for: Building a new Muti-Purpose Machine Gun Range, to be located on Ft. Jackson. The facilities will consist of 6 firing points with automated target system. The supporting facilities include the range control tower, operations/storage building, concrete pad for Port-O-Lets, range operation and maintenance building, covered mess, ammo breakdown building, covered bleachers, classroom, and utilities. The range will train the individual soldiers on the skills necessary to identify, engage, and hit stationary infantry targets. The MPMG Range is needed by the SCARNG to allow its Soldiers to qualify on their assigned weapons. No other similiar ranges are available in the State. The SCARNG has tried to utilize other ranges on Ft. Jackson, but they were not designed to meet the uniques requirements fo MPMG Qualification. 100% Federal Funds (No State Match Required).

	1,120,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	General Funds - Existing	Indefinitely	4,000
			4,000

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Repair/Replace/Re-seal all of the exterior masonry venier (brick & mortar) of the Pine Ridge Armory. The Pine Ridge Armory was built in the early 1990s, and over 25 years later, all of the exterior masonry venier walls have severe oxidization causing the lentils/rebar to rust and force the mortar to push out from in-between the brick courses. If this is not addressed soon, this condition could cause leaks and other rapid deterioration within the structure of the building. Repair/Replace/Re-seal the exterior masonry venier will help ensure the integrity of the building. No other suitable facilities are available, and no alternatives are as cost effective.

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Replace the existing inadequately sized Sewage Lift Station with new Lift Station & Gravity Sewer that supports the Regional Training Institute, Building 3800, on the McCrady Training Center.

The existing Sewage Lift Station that supports the RTI was installed in 1998 and is nearing the end of its serviceable life. The RTI has been plagued with Lift Station failures and repairs over decade, which has directly affected their Federal mission which supports the US Army's Training and Doctrine Command (TRADOC). These failures included numerous sewage flooding into the RTI's building interior. The new Lift Station & Gravity Sewer will be designed to meet current and future demands of the training center. No other suitable facilities are available.

Description

The Agency requests funding for significant repairs/replacements at the ten (10) Readiness Centers (aka; Armories) that are in the worst conditions of disrepair of the 63 RCs (chosen based on the A/E's assessment/design): Greenwood, Lancaster, Greenville, Florence, Sumter, Clemson, Laurens. Union, Hartsville, Easley. Each of these facilities have varying issues that need to be repaired or renovated, but the major cost items include; Roof, HVAC Systems, Exterior Windows, Doors & Storefront Systems, Latrines, Kitchen, Lighting, Fire Suppression, Electrical Systems, and Site Improvements. In accordance with Federal law, the State of South Carolina is obligated to National Guard Bureau to provide operation and maintenance funding for these facilities as long as there is a federally recognized unit assigned to the facilities. The facilities are in poor condition, undersized, do not meet current building codes, nor current Security & Force Protection standards. This agency has relocated and/or consolidated force structure to other RCs and closed the sub-standard RCs that could be closed. NOTE: This is an Annualized Project. The project total for this year is \$30,072,000 (SFY19-21) + \$6,726,000 = \$36,798,000, and will increase over the next 2 years to equal a total of \$45,524,000 in the final year (SFY23). Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Renovate and expand existing the Female Latrine in various Readiness Centers across the state. Scope of work includes renovating existing female latrine and constructing additional authorized space to include new utilities and fixtures, along with any required mechanical, electrical and plumbing work.

Per NG Pam 415-12, the assigned unit(s) are authorized 2,000 SF of latrine space. Army regulations have been amended since the construction of the majority of the SCARNG's RC opening up additional positions to female Soldiers thus creating a deficit of female space at most SCARNG RCs.

No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$1,450,000 (SFY19-21) + \$600,000 = \$2,050,000, and will increase over the next 2 years to equal a total of \$2,650,000 in the final year (SFY23).

Description

The Agency requests funding for all labor, materials, and equipment to:

1. Replace the six (6) HVAC units. The units and their cooling sizes are: SHP-4A (3.5 ton), SHP-4B (4 ton), SHP-11A (5 ton), SHP-11B (5 ton), SHP-12A (5 ton), and SHP-12B (5 ton).

The HVAC Units servicing SCEMD's main facility were manufactured in 1999 and are nearing the end of their serviceable life. These 20+ years old HVAC units all use R-22 refrigerant. Since R-22 is being phased out and costs are increasing, we need to modernize our HVAC infrastructure for R-410A, a safer and compliant refrigerant. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$150,000 (SFY21) + \$157,500 = \$307,500, and will increase next year to equal a total of \$472,875 in the final year (SFY24).

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Demolish an existing WWII Era barracks and Construct a replacement 3,200 SF TT ENL Barracks at the two Training Sites listed below. Each Barracks building will be of permanent Construction with a finished interior, including MEP systems, a Latrine with showers, urinals, toilets, sinks and washer/dryer connections. Installation of utilities and the extension of utilities to the nearest service lines. This project will replace one barracks at each site per year.
 - McCrady Training Center (MTC) (#3511, #3510, #3501, #3502, #3934).
 - Clarks Hill Training Site (CHTS) (#4423, #3334, #4723, #4722, #4721).

The barracks to be replaced are no longer sufficient for the housing of Soldiers; the structures are not insulated properly; the roofs are cost prohibitive to repair; no latrine; single pane windows; and old/energy inefficient light fixtures. Due to their age and condition, the existing barracks no longer support the SCARNG's mission. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$4,067,248 (SFY19-21) + \$1,326,416 = \$5,393,664, and will increase over the next 3 years to equal a total of \$8,046,496 in the final year. Reference E240-P-2022-1074.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Demo what remains of the existing Personally Owned Vehicle (POV) Parking Areas, either completely or in damaged areas, re-compact Subgrade, apply Asphalt Overlay, and re-stripe. Work will be completed at various armories across the state with repairs per armory based on conditions. POV parking areas at numerous armories are in disrepair and/or complete failure and cannot be utilized for Soldier or Public parking. Repairs and or replacement of the parking surface will provide improved parking. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$351,000 (SFY20-21) + \$175,500 = \$526,500, and will increase over the next 2 years to equal a total of \$877,500 in the final year (SFY 2024). Reference E240-P-2022-1077.

			7,000

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Construct a new 1200 SF Kitchen addition at various Readiness Centers across the state.

The existing kitchens at these RCs do not meet current building code requirements; are not in compliance with Occupation, Safety and Health regulations and are not adequate to meet the needs of the assigned units. Adding the Kitchen Additions to the RCs will rectify most of these issues.

No other suitable facilities are available.

Additional Professional Services/Fees are requested to allow the Design of approximately 5 Kitchens in the first year, thus creating "shelf-ready" projects for the last 3 years.

This is an Annualized Project. The project total for this year is \$4,170,205 (SFY19-21) + \$1,633,058 = \$5,803,263, and will increase over the next 3 years to equal a total of \$8,806,699 (SFY24).

Description

The Agency requests funding for:
Construct a new 45,582 SF National Guard Readiness Center that supports the training, administrative, and logistical requirements for the SCARNG. This facility will be built on State land, specifically planned to be on the Aiken Technical School Campus. Construction of this Readiness Center is required to house all elements of WY1DAA 1221st Engineer Company, allowing the unit adequate training, logistical and administrative space to train and prepare for its wartime mission. Also, demolition of an existing too-small and failing armory from the SCARNG's facilities. and provides an appropriately-sized RC with stationing flexibility to meet future force structure changes. This facility will house approximately 5 authorized full-time employees and 145 M-Day Soldiers. Currently the unit is assigned to a 44 years-old Armory that does not comply with the criteria of NG Pam 415-12 dated 25 January 2015, nor does it meet Anti-terrorism/Force Protection (AT/FP) standards. No other facilities are available to house the new units. Reference E240-P-2022-1071.

Description

The Agency requests funding for significant repairs/replacements at the ten (10) Readiness Centers (aka; Armories) that are in the worst conditions of disrepair of the 63 RCs (chosen based on the A/E's assessment/design): Greenwood, Lancaster, Greenville, Florence, Sumter, Clemson, Laurens. Union, Hartsville, Easley. Each of these facilities have varying issues that need to be repaired or renovated, but the major cost items include; Roof, HVAC Systems, Exterior Windows, Doors & Storefront Systems, Latrines, Kitchen, Lighting, Fire Suppression, Electrical Systems, and Site Improvements. In accordance with Federal law, the State of South Carolina is obligated to National Guard Bureau to provide operation and maintenance funding for these facilities as long as there is a federally recognized unit assigned to the facilities. The facilities are in poor condition, undersized, do not meet current building codes, nor current Security & Force Protection standards. This agency has relocated and/or consolidated force structure to other RCs and closed the sub-standard RCs that could be closed. OTE: This is an Annualized Project. The project total for this year is \$36,798,000 (SFY19-22) + \$6,726,000 = \$43,254,000, and this is the final year (SFY23). Reference E240-P-2023-1078.

Utilities	General Funds - Additional	Indefinitely	2,500
Utilities	Federal Funds - Additional	Indefinitely	2,500
			7,000

Description

The Agency requests annualized funding for all labor, materials, and equipment to:
 1. Construct a new 1200 SF Kitchen addition at various Readiness Centers across the state.
 The existing kitchens at these RCs do not meet current building code requirements; are not in compliance with Occupation, Safety and Health regulations and are not adequate to meet the needs of the assigned units. Adding the Kitchen Additions to the RCs will rectify most of these issues.
 No other suitable facilities are available.

Additional Professional Services/Fees are requested to allow the Design of approximately 5 Kitchens in the first year, thus creating "shelf-ready" projects for the last 3 years.

This is an Annualized Project. The project total as of this year is \$5,803,263 (SFY19-22) + \$1,545,498 = \$7,348,761, and will increase next year to equal a total of \$8,806,699 (SFY24).

Description

The Agency requests funding for:
 Construct a new 45,048 SF National Guard Vehicle Maintenance Shop (FMS) that supports the training, administrative, and logistical requirements for the SCARNG. This facility will be built on State land, replacing the existing FMS.
 Construction of this FMS is required to provide a vehicle maintenance facility for W8SZ14 FMS-14 to maintain equipment for supported units for their peace-time training and ensure the equipment is prepared for mobilization. Also, demolition of the existing over 39,000 SF too-small and failing FMS from the SCARNG's facilities will provide sufficient space. This facility will house approximately 40 authorized full-time employees to maintain up to 639 vehicles.
 Currently the existing FMS is over 50 years-old that does not comply with the criteria of NG Pam 415-12 dated 25 January 2015, nor does it meet Anti-terrorism/Force Protection (AT/FP) standards. Renovation of the existing FMS will not meet the requirements, and no other facilities are available to the SCARNG to replace it.

Description

The Agency requests funding for significant repairs/replacements at two (2) additional Readiness Centers (aka.; Armories) that are in the worst conditions of disrepair of the 63 RCs (chosen based on the A/E's assessment/design).

Each of these facilities have varying issues that need to be repaired or renovated, but the major cost items include; Roof, HVAC Systems, Exterior Windows, Doors & Storefront Systems, Latrines, Kitchen, Lighting, Fire Suppression, Electrical Systems, and Site Improvements.

In accordance with Federal law, the State of South Carolina is obligated to National Guard Bureau to provide operation and maintenance funding for these facilities as long as there is a federally recognized unit assigned to the facilities. The facilities are in poor condition, undersized, do not meet current building codes, nor current Security & Force Protection standards.

This agency has relocated and/or consolidated force structure to other RCs and closed the sub-standard RCs that could be closed.

NOTE: This is NOT an Annualized Project.

Maintenance and Repairs	Federal Funds - Additional	Indefinitely	(5,000)
Utilities	Federal Funds - Additional	Indefinitely	(2,000)
			(7,000)

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

- Demolish an existing WWII Era barracks and Construct a replacement 3,200 SF TT ENL Barracks at the two Training Sites listed below. Each Barracks building will be of permanent Construction with a finished interior, including MEP systems, a Latrine with showers, urinals, toilets, sinks and washer/dryer connections. Installation of utilities and the extension of utilities to the nearest service lines. This project will replace one barracks at each site per year.
 - McCrady Training Center (MTC) (#3511, #3510, #3501, #3502, #3934).
 - Clarks Hill Training Site (CHTS) (#4423, #3334, #4723, #4722, #4721).

The barracks to be replaced are no longer sufficient for the housing of Soldiers; the structures are not insulated properly; the roofs are cost prohibitive to repair; no latrine; single pane windows; and old/energy inefficient light fixtures. Due to their age and condition, the existing barracks no longer support the SCARNG's mission. No other suitable facilities are available.

This is an Annualized Project. The project total for this year is \$6,720,080 (SFY19-23) + \$1,326,416 = \$8,046,496, which is the final year.

Description

The Agency requests annualized funding for all labor, materials, and equipment to:

1. Replace asphalt Shingle Roofs with Standing Seam Metal on multiple SCARNG buildings across the state. Initial group of buildings are listed below. This project will replace the Roofs on 1-2 Buildings per year.
 - McCrady Training Center (MTC) (bldg #3908, #3909, #3850, #3852).
 - Clarks Hill Training Site (CHTS) (bldg #6140, #5001, #5005, #5002).

These Roof Replacement projects will extend the life of these facilities by 25+ years. Replacing with asphalt Shingles will be less effective.
No other suitable facilities are available.

This is an Annualized Project. The project total is \$1,638,000 (SFY20-23) + \$409,500 = \$2,047,500, which this is the final year.

Description

The college is currently in the process of constructing a new nursing and health science building. Upon completion of the new facility, the existing nursing and health science building, built in the 1980s, will need considerable renovations as this space will be repurposed for other programs in nursing and health science. A master plan study conducted in 2014 shows proposed renovations to this facility, with an estimated cost of approximately \$4 million. The plan shows the need for extensive upgrades to the electrical systems and HVAC systems as well as other renovations. The building's HVAC system is beyond its estimated life expectancy, so replacement is planned with goals to improve indoor air quality. The building also needs electrical systems upgrades to support increased technology in the facility. Other infrastructure upgrades, such as water/sewer, IT cabling, etc. are also needed. The college has no alternatives to consider, as this space has not undergone any major renovations or upgrades in its 30 year existence.

Description

Buildings A-J are the oldest on campus, with aging electrical and HVAC systems that have either reached end of life or are approaching end of life. Most of the project funds would be used to replace electrical systems, chillers, heat pumps, HVAC controls, etc., with more energy efficient systems. The college also has several areas within these facilities to renovate/repurpose (including upgrading restrooms) in addition to the electrical and HVAC upgrades.

Description

The college desires to make major renovations to three adjacent buildings (Buildings L, M, &N) that serve the advanced manufacturing programs. These three facilities total approximately 35,000 square feet. The renovation will replace end of life HVAC systems with more energy efficient systems, update building infrastructure (electrical systems, IT cabling, water/plumbing, sidewalks, drainage, related parking, etc), and address safety concerns with some existing restrooms with outside access by relocating and/or changing access. The college also desires to renovate and repurpose classroom and lab space for best use by the advanced manufacturing programs, especially those that have seen tremendous enrollment increases the past few years. The college's estimated cost of \$4 million for this project is based on estimates it has received to renovate its nursing and health science building (which is approximately the same square footage and needs similar upgrades to HVAC and electrical).

Description

The college desires additional space to support existing and emerging manufacturing careers in Orangeburg and Calhoun counties. According to the most recently updated Academic/Facilities Master Plan, there is a need for approximately 25,000 square feet of additional space to support the following academic programs: Electronics Instrumentation Technology, Industrial Maintenance Technology, Mechatronics, and Engineering Graphics Technology. The current space does not provide the quantity or the quality of space to adequately train students as manufacturing continues to evolve in our region. These programs not only represent high wage high demand jobs in the current marketplace, but are expected to grow exponentially as companies in the aerospace and automotive sectors make Orangeburg and Calhoun counties their home. The college is considering a location in close proximity to Buildings L and N (two current advanced manufacturing program buildings). The additional space could be a new facility between the two existing facilities or an addition to one of those existing facilities. The total cost of the project is estimated at \$10 million.

Description

Piedmont is requesting funding for an addition and renovations to two existng buildings which will house Nursing / Science Programs and office support space. The current Science Building (S) has a building condition of 81 and was originally built in 1991. The nursing / science program is strong and growing in the service area of the college and the state. The existing buildings do not provide adequate teaching and lab space and are in need of renovations. The proposed building will be a two story facility with approx. 30,000 sq.ft.. In today's construction climate nursing / science building costs are approx. \$250.00 per sq.ft.. The cost of designing/engineering, building, and inspections have an internal projected cost estimate is \$ 9,150,000. Piedmont Technical College will provide 20% of the cost per state statute.

Description

Piedmont's Sheet Metal Training lab is located in the back of an existing building. Space is very limited and creates an unsafe environment for handling metal. Machines are close together leaving little room to properly instruct or lookover the students work. The metal holding area is undesirable and hard to access. The existing lab is located away in another building away from the HVAC Training Complex causing students to move from one part of campus to another for lab and hands on instruction. In order for the program to provide a safe and appropriate training space, it is Piedmont's desire to build a new Sheet Metal Training facility to be located adjacent to the HVAC Training Complex. The projected building size is 10,000 sq.ft.. The new building and professional fees in-house cost estimate is approx. \$2,240,000. PTC will provide 20% of cost per State statute.

Description

H, S, G and C Building Renovation Project consist of four older buildings. H Building was built in 1982. These building house a portion of the nursing department which includes labs, classrooms and faculty offices. The S Building was built in 1991 which houses Health Science labs and classrooms on the second level. The G building was built in 1973. A portion of the G building is utilized for Nursing labs, data labs, and classrooms. A new elevator is needed to satisfy the ADA concerns located at the south end of the campus where H and S buildings are located. All buildings are in need of deferred maintenance and code upgrades especially the labs. HVAC, EMS and lighting upgrades are included in this plan. New technology requires additional space in labs and new design to be functional. H, S and G Buildings are located on the Greenwood Campus. PTC will provide 20% of project cost.

Description

In order to meet ADA concerns, PTC is requesting funding for a project which includes an elevator, ramp and associated renovations to D and F Buildings. This area is the traffic hub of the campus. An elevator would serve four buildings allow people to travel both upstairs and down from building to building. Renovations would need to occur to accommodate both the elevator and ramp. With the increasing population of individuals with accessibility challenges that includes students, staff, instructors and visitors it is critical to address these ADA accessibility issues.

Description

Piedmont Technical College has been aggressive in implementing energy initiatives by installing high performance equipment, LED lighting, water saving devices, and controlling HVAC / Mechanical equipment. Equipment that is over 25 years old will be evaluated and replaced as needed. PTC will be installing a solar field to generate power to one of our high energy use buildings. A complete campus energy audit will be conducted not only of buildings but detailed equipment status and performance. A complete upgrade of campus Energy Management Systems is also part of the overall project. This project includes all PTC Campuses (Greenwood, Abbeville, McCormick, Newberry, Edgefield, Laurens - (LHEC & CAM) and Saluda).

Roofing Repair and Replacement	1,400,000	State Funds - Appropriations	1,445,000
	1,445,000		1,445,000

Description

In 2009, the University invested in a campus wide roof assessment that identified \$5.2M in roofing needs campus wide. Roof replacements are prioritized to include: Turner Hall (built 1956, 111,658 sq ft; Program/Academic - \$800,000); Williams Hall (built 1966, 36,320 sq ft; Auxiliary/Housing - \$190,000); Staley Hall (built 1954, 30,675 sq ft; Program/Academic - \$325,000); and Crawford Zimmerman (built 1982, 48,980 sq ft; Support Services - \$130,000). Roof repairs, Phase I, is 30% of the overall project cost of \$5.2M.

Justification: This project is necessary to protect the assets of the University.

Alternatives Considered: The University has made repairs to the roofs, which is just a temporary fix to the much needed replacements to ensure health/safety issues and protect the life of the buildings overall.

Professional Services/Fees	800,000		4,400,000
	4,400,000		

Description

Truth Hall is a 14-story residence hall that was taken off-line in 2015 due to maintenance needs and lack of enrollment. In 2017, a limited number of floors were brought back on-line to accommodate housing needs. SC State University needs the 384 beds that Truth Hall provides the University to accommodate the enrollment growth and the need to take other residence halls off-line. The renovations include addressing life and safety concerns (fire suppression and fire alarm systems), mechanical concerns (replacement of chiller, fan coil units, and stand alone boilers for heating and domestic hot water), new elevators, technology matters, and interior renovations to bathrooms, lobby, and bedrooms.

Justification: This project is necessary to protect the safety of students and the University's asset.

Alternatives Considered: The University continues to made on-going repairs and will continue to make the temporary fixes until funding is available to move forward with this major renovation.

Professional Services/Fees	55,000	State Funds - Appropriations	3,361,000
	3,361,000		3,361,000

Description

The Student Success Enrollment and Retention upgrades and renovation component includes creating a one-stop shop of support service departments and renovations to the existing student center. The one-stop shop would use the Crawford Zimmerman Building and create a systemic order of support offices (Financial Aid, Admissions, Student Accounts, One Card, Bookstore) to facilitate in a shorter time to handle enrollment/registration through payment for those persons unable to use the online process. Renovations to the existing student center would provide a more enjoyable for students which helps with student retention.

Justification: This project is necessary to improve the quality of the student environment and increase the retention rate of the student body.

Alternatives Considered: The University has not identified any alternative at this time.

			1,700,000

Description

Wilkinson Hall was built in 1938 from funding from the New Deal Program after the Great Depression and named after the University's second president, Robert Shaw Wilkinson, a South Carolina native. The original use of the Hall was a library until it was repurposed to be used for student support by housing Admissions, Financial Aid, and other student support offices. In 2007 the building had to be vacated due to its deteriorated state as a result of maintenance being deferred which lead to a deteriorated roof, flooding, molding, peeling walls, and poor air quality.

Due to the historic presence and the university's concern to preserve its assets, this capital funding request will assist the university in restoring a valuable asset. The funding will be used for roof replacement, a new chiller, a new boiler, new flooring, and wall and ceiling repairs. After renovations, the building will be used to house the Registrar's Office and an Office for Veteran Affairs Support.

Justification: This project is necessary to protect the assets of the University.

Alternatives Considered: The University has made repairs to the roofs, which is just a temporary fix to the much needed replacements to ensure health/safety issues and protect the life of the buildings overall.

Other Costs	3,960,000	Previously Requested	
Roofing Repair and Replacement	240,000	State Funds - Capital Reserve Fund	4,200,000
	4,200,000		4,200,000

Description

Truth Hall is a 14-story residence hall that was taken off-line in 2015 due to maintenance needs and lack of enrollment. In 2017, a limited number of floors were brought back on-line to accommodate housing needs. SC State University needs the 384 beds that Truth Hall provides the University to accommodate the enrollment growth and the need to take other residence halls off-line. The renovations include addressing life and safety concerns (fire suppression and fire alarm systems), mechanical concerns (replacement of chiller, fan coil units, and stand alone boilers for heating and domestic hot water), new elevators, technology matters, and interior renovations to bathrooms, lobby, and bedrooms.

Justification: This project is necessary to protect the safety of students and the University's asset.

Alternatives Considered: The University continues to made on-going repairs and will continue to make the temporary fixes until funding is available to move forward with this major renovation.

Roofing Repair and Replacement	2,608,300	State Funds - Appropriations	2,658,300
	2,658,300		2,658,300

Description

In 2009, the University invested in a campus wide roof assessment that identified \$6.6M in roofing needs campus wide. Roof replacements are prioritized to include: Hugine Suites (built 2007, total 246,033 sq ft; Auxiliary/Housing - \$2,342,200) and Washington Dining Hall (built 1962, 22,308 sq ft; Auxiliary/Food Service - \$316,100) . Roof repairs, Final Phase, is 40% of the overall project cost of \$6.6M. Roof repairs - Phase I is 22% and Phase II is 38%.

Justification: This project is necessary to protect the assets of the University.

Alternatives Considered: The University has made repairs to the roofs, which is just a temporary fix to the much needed replacements to ensure health/safety issues and protect the life of the buildings overall.

			1,125,000

Description

Mays I, Mays II, and Queens Village are residential housing facilities that have deteriorated due to the limited resources and the inability of the university to provide all the needed upkeep. The current state of the building has made renovating not an option. Demolishing the building will give the university the ability to construct new learning living facilities that meet current times.

Justification: This project is necessary to protect the safety of students and others on campus and improve the campus infrastructure and student learning environment.

Alternatives Considered: The University has not identified any alternative at this time.

	500,000		500,000

Description

The I.P. Stanback Museum and Planetarium is used by the university's academic personnel to add to the learning experience for the arts and sciences. The facility was also used by area schools for the same purpose. Receiving this funding will allow the university to perform needed roof repairs, HVAC upgrades and exterior waterproofing to preserve the collections displayed.

Justification: This project is necessary to improve the quality of the student learning environment and promote outreach programs that strengthen the relationship between the university and the community.

Alternatives Considered: The University has not identified any alternative at this time.

Project Costs	Amount	Fund Sources	Amount
Professional Services/Fees	300,000	Previously Requested	
Site Development	300,000	Other Funds	3,450,000
Utilities	2,850,000		3,450,000
	3,450,000		

Description

SCSU Storm Water Infrastructure Repairs and Renovations project is essential to prevent future flooding of University assets. The University has experienced at least 5 floods that were costly to the University with regards to damage and funds spent. The existing storm water piping is not capable of removing water from roads and around buildings during heavy rainfall. This project will allow for civil upgrades (additional piping and piping with a wider diameter) around Hugine Suites (Auxiliary/Housing) and additional storm water piping installation at the front of the campus (Parking/Roads) and around Belcher Hall (Program/Academic), Nance Hall (Program/Academic), and Martin Luther King Auditorium (Program/Academic/Recreational).

Justification: This project is necessary to ensure safety of students and prevent future flooding of the University's asset.
 Alternatives Considered: The University continues to take preventative steps to minimize/prevent flooding when sufficient warning is provided.

Maintenance and Repairs	General Funds - Existing	Indefinitely	(10,000)
Utilities	General Funds - Existing	Indefinitely	(7,000)
			(17,000)

Description

The Central Campus utilizes a central energy plant (CEP) providing chilled water to its eight (8) major buildings. The CEP consists of three (3) primary chillers ((1)-700 Ton, (2) 400 Ton) which includes a 1989 400 Ton chiller. The 400T chiller continues to fail and requires extensive maintenance and is unreliable especially during peak heat loads during the summer. The college master plan is to add a 70,000 SF STEM building when funding becomes available requiring additional chilled water for cooling load. This project proposes to replace the existing 400T chiller and cooling tower with at least a comparable sized chiller and cooling tower providing additional system capacity and in planning for an additional campus building. Costs to replace and upsize the chiller and its cooling tower is estimated at \$550,000. This project would require mechanical engineering services and contracted mechanical services to include a 5 year warranty on the cooling tower.

Description

SCC is working with Cherokee County Schools to develop an Early College Program in concert with its Institute of Innovation (Technology Center) located adjacent to SCC's Center for Advanced Manufacturing & Industrial Technologies (CAMIT). Additional classroom space is needed to accommodate early college students. SCC's Cherokee County Campus Parris Bldg has an open space available that would require closing in an overhead space in an existing high bay area. Project scope would include installing a floor system and walling in to include mechanical, electrical, and finishes. Architectural, mechanical, and electrical design services would be required.

Note: 2019-20 Funding from Lottery Certified Surplus.

			(17,000)

Description

The Jack A. Powers Building (formerly West Building) was originally constructed in 1969 with three wings, (B, C, and D). Wing (A) was added in 1973. All its roofs were first replaced in the early 1990's. The A-Wing roof had its 2nd replacement in 2019. This project entails replacement of the B-Wing & C-Wing roof systems (34,000 SF) which were first replaced in 1992 (27 years ago). The project would require tear off of the existing Built UP roofs and replacement with a TPO membrane roof. The CHEMIS Building Condition Code (BCC) for the Powers Building is rated 56 of 100, one of the lowest building ratings for the college. The rating is heavily affected by its roof system condition. Costs to reroof both B & C Wings is estimated at \$544,000. This project would require architectural engineering services and contracted roof replacement services to include a 20 year warranty.

Note: This project was previously submitted as a comprehensive project including multiple phases. The project is now being submitted based upon Capital Budgeting guidance that successive renovations to the Powers Building will require A-1 approvals. Successive renovations will have to be phased in over time due to the major student loading of that building. Funding will be from College Plant Funds.

			(8,696)

Description

The Tyger River Building (362,000 SF) is an Enterprise Campus Authority, utilized for both academic programs and economic and workforce development for Spartanburg County. The building was originally constructed in 1986. Its roof systems are varied with both membrane roofs over some office areas but primarily insulated metal roofs over the majority of the building. The '86 warehouse area (17,390 SF) is a metal roof (30+ years age) requires covering the existing metal roof with insulation and a TPO membrane. The CHEMIS Building Condition Code (BCC) for the Tyger River Building is rated 71 of 100, one of the lower building ratings for the college. The rating is heavily affected by its roof system condition. Costs to reroof the 86 Warehouse is estimated at \$163,000. This project would require architectural engineering services and contracted roof replacement services to include a 20 year warranty. Funding will be from College Plant Funds.

Maintenance and Repairs	General Funds - Existing	Indefinitely	(5,000)
			(5,000)

Description

This project entails renovation of the Central Campus Jack A. Powers Building (formerly West Building) Chemistry Labs B5, B10 and shared Prep Room (3,029 SF). Scope of work would include demolition of casework, equipment, ceilings and lights, flooring, mechanical, electrical, concrete and masonry. New finishes would include wall, floor, ceiling finishes, plumbing, HVAC systems, electrical service & distribution, energy efficient lighting & branch wiring, communication/fire alarm & branch wiring. Mechanical and plumbing would include exhaust fans and ductwork, plumbing and gas rough-ins. The CHEMIS Building Condition Code (BCC) for the Powers Building is rated 56 of 100, one of the lowest building ratings for the college. The rating is heavily affected by its HVAC system condition and dated finishes. The above demolition work requiring removal of mechanical ductwork and piping in the ceilings would result in considerable impacts to the interior finishes of the renovated wings. This project would require engineering services and contracted construction services.

Note: This project was previously submitted as a comprehensive project including multiple phases. The project is now being submitted based upon Capital Budgeting guidance that successive renovations to the Powers Building will require A-1 approvals. Successive renovations will have to be phased in over time due to the major student loading of that building. Funding will be from College Plant Funds.

Description

This is the second phase of a two phase project to construct an academic/student services classroom building. This building will include a 70,000 sq. ft. academic center with Associate of Science (AS) classrooms, a student study area, meeting rooms and conference space. The primary purpose of this facility is to provide science laboratories, biology, chemistry and physics classrooms, distance learning classrooms, advanced composite materials laboratories, testing center and a teaching and learning center, conference space, and a much needed food service operation. With the continued growth of our college transfer programs, using older labs for teaching curriculum intensive sciences are inadequate as existing classrooms were built for technical and vocational training. The college plans to utilize the \$5.83M phase I cost as the required match for state funding in this phase. The college currently has no classrooms or labs designed specifically for use by the AS programs. The college's transfer programs require that we have adequate program specific labs and classrooms to accommodate and meet educational requirements. Also it would support Advanced Composite Materials and Chemical Processing Technology Programs. This project has been reflected on CPIP since 2007. An Academic Master Plan for SCC was completed in 2015 with a new cost estimate for site development for parking/utilities, site development for storm water modifications, and new construction totalling \$25,674,000.

Description

SCC anticipates an opportunity to acquire an adjoining property to its Central Campus located on Business 85 and Brisack Road. The property has a 225,000 SF light manufacturing/warehousing/distribution facility situated on approximately 23 acres. The building is presently leased, through 2019. The property owner is interested to sell the property and SCC has had some preliminary discussions with the owner's broker. This matter is anticipated to resurface in 2019, the last year of the lease. This project is included on the CPIP in anticipation thereof. It is believed the property can be purchased at or below \$6 Million. The College is interested in the property as an investment for future campus development considering the growth in economic development along the I-85/I-26 corridors in Spartanburg County. No other adjoining properties are presently on the market, suitable for campus development.

Description

This project is to expand the existing Union County Campus Bldg (14,000 SF) by 20,000 SF to include spaces for classrooms, office spaces, storage rooms, and restrooms. An addition to the existing building would be necessary for a machine tool room. The expansion would be accommodated on the existing building site. Union County workforce demands additional skilled workforce in advanced manufacturing, science, and healthcare. Additional programs would be for machine tool, biology, LPN, and certified nursing assistant. In addition to the skilled workforce programming is the need for general classroom space for dual education with an office space. The building expansion would require engineering services to include architectural, civil, structural, mechanical/HVAC, fire protection, plumbing, and electrical.

This project entails replacement of the D-Wing roof system (22,000 SF) which was first replaced in 1992 (27 years ago). The project would require tear off of the existing Built UP roof and replacement with a TPO membrane roof. The CHEMIS Building Condition Code (BCC) for the Powers Building is rated 56 of 100, one of the lowest building ratings for the college. The rating is heavily affected by its roof system condition. Costs to reroof the D-Wing is estimated at \$352,000. This project would require architectural engineering services and contracted roof replacement services to include a 20 year warranty.

Note: This project was previously submitted as a comprehensive project including multiple phases. The project is now being submitted based upon Capital Budgeting guidance that successive renovations to the Powers Building will require A-1 approvals. Successive renovations will have to be phased in over time due to the major student loading of that building. Funding will be from College Plant Funds.

Description

This project entails renovation of the Central Campus Jack A. Powers Building (formerly West Building) HVAC system converting from unit ventilator and fan coil systems to a variable air volume (VAV) system. The Powers Building was constructed in 1969 with three wings, (B, C, and D). Another wing (A) was added in 1973. The D wing was renovated to the VAV system in 2006. The C wing underwent its HVAC system upgrade to VAV in 2018/19. The HVAC system in wings A, B, are aged at 40+ years, far exceeding equipment life expectancy. The CHEMIS Building Condition Code (BCC) for the Powers Building is rated 56 of 100, one of the lowest building ratings for the college. The rating is heavily affected by its remaining HVAC system condition. Costs to renovate the HVAC system in the B-Wing is estimated at \$1,266,318. The HVAC renovations require removal of mechanical ductwork and piping in the ceilings resulting in considerable impacts to the interior finishes of the renovated wing. Renovations would also include replacing the ceiling grid/tiles, upgrading to energy efficient lighting systems, and the repainting of all finishes. The work also requires the installation of a roof top air handler requiring roof penetration and structural support. This project would require architectural, electrical, mechanical, and structural engineering services and 3rd party inspection services.

Note: This project was previously submitted as a comprehensive project including multiple phases. The project is now being submitted based upon Capital Budgeting guidance that successive renovations to the Powers Building will require A-1 approvals. Successive renovations will have to be phased in over time due to the major student loading of that building. Funding will be from College Plant Funds.

Description

SCC's Tyger River Center for Business and Entrepreneurial Development (CBED) continues to to be fully utilized for Spartanburg County economic development activities. Most recently, 2016, the CBED was expanded by renovating 20,000 SF of office space to accommodate the growing need for expanding and new companies locating to Spartanburg County. That space was quickly utilized. Based on continued announcements (namely BMW Mfg), there is the need to further expand the CBED area another 20,000 SF. Renovations would entail expanding into the existing warehouse with walling for new offices, meeting and collaboration spaces, providing electrical, HVAC, fire protection, water, toilet facilities, new ceilings with energy efficient lighting, and new finishes. Based on the recent renovations it is estimated to cost \$2.125M for procuring A&E services and the renovations. No other alternatives considered viable for this project.

Description

Replacement and upgrade of the Ledbetter Building second floor HVAC system to include digital controls. The Ledbetter Building was constructed in 1966 and is mostly operating with original HVAC equipment far exceeding its life cycle. The lower floor was renovated in 2004-5. All second floor air handler units, boiler, and ductwork needs replacing and operating controls upgraded to digital to interface with the College building automation system. There is no viable alternative to this project.

			(44,500)

Description

The Hull Building (formerly East Building) was originally constructed in 1963 and with five subsequent additions through 2002. The overall single story area encompasses 94,431 SF. The roof systems are built up asphaltic roofs except for two roof sections that are now TPO membrane roofs. This project entails replacement of the remaining roof area, 89,391 SF. The project would require tear off of the existing Built UP roofs and replacement with a TPO membrane roof. The CHEMIS Building Condition Code (BCC) for the Hull Building is rated 64 of 100, the lowest building ratings for the college. The rating is heavily affected by its roof system condition. Costs to reroof the remaining portion of the Hull Bldg is estimated at \$1,430,250. This project would require architectural engineering services and contracted roof replacement services to include a 20 year warranty.

Other Permanent Improvements	200,000	Fully Collected/Committed	
	200,000	Other Funds - Operating Revenue	200,000
			200,000

Description

The Housing Authority's Information Technology Data Center has NO fire suppression system. The installation of a new system will include equipment and hardware costs, as well as contractual costs for the installation in the building facility. Since this will be installed in the building, if the Housing Authority was to move from this facility, the system would not be transferrable, but would stay with the current building.

Type of system: Wet, dry or mixed fire suppression system.

The systems will need plumbing/pipe work, electrical/breaker panel work, and possibly some custom fabrication work. Possible expenses or components would include enunciators, strobes, lights, alarms, smoke/heat detectors, extinguisher heads/ports, halon tank and charging.

This project was not completed in FY 2019 as originally submitted. It is expected to be completed in the first quarter of FY 2020.

			650,000

Description

The agency's Forensics Laboratory provides forensics laboratory services to the state's various law enforcement agencies. The lab is completely out of space and as a result, is not able to add the resources to address an ever increasing workload and also attempt to reduce and existing backlog of cases. Site limitations and construction logistics made it impractical to expand the existing structure to meet the agency's needs. The Legislature provided \$54M in funding for a replacement facility. This project has completed design development and construction documents are under way. The facility is designed at 117,000 SF with a projected hard construction budget of \$46M. The building is being placed on a site deeded to SLED by the SC Department of Juvenile Justice. Current projects are for completion of construction in the summer of 2021.

			425,000

Description

The construction of the replacement Forensics laboratory will vacate the former 60,000 SF Forensics Laboratory building. This facility is on SLED's main campus. The agency currently experiences a severe shortage of office space and only has a limited number of small conference spaces. Several of the agency's functional units are broken apart and work in different locations due to space considerations. This lack of consolidated space contributes to ongoing inefficiencies. Renovation of this facility into an office building will allow for functional consolidation of work units and allow the removal of personnel from buildings not suitable for utilization as office facilities. This step will allow the Regulatory department, currently spread into multiple locations, to be consolidated into a single location. The Midlands District and Narcotics units will then be allowed to return to the Broad River Road campus. The agency plans a Phase I project initiation and space study in 2021 with renovation to take place once the structure is vacated.

Description

The CJIS facility houses the agency's IT, Data Center, Regulatory and NCIC functions. The facility is currently heated and cooled by nine rooftop units. These units are of varying age and most have a lower efficiency rating. This project would remove those units and replace them with a single non-rooftop high efficiency system. The agency conducted an energy study which identified all possible alternatives and specified the ROI on each alternative. The preferred high efficiency solution is projected to result in energy savings with a projected 9 year payback vs standard replacement of existing units and provide for better climate control in the facility. All other alternatives have decreasing ROI over their respective life spans.

Description

The CJIS facility houses the agency's IT, Data Center, Regulatory and NCIC functions. The current roll roof is at end-of-life cycle. The facility houses in excess of \$8M in IT equipment, paper records and mission critical functions. Scheduled replacement of the roof will provide continuing water tight protection to the facility. Newer technology roofing applications will dramatically improve the energy efficiency of the structure and reduce the cost associated with HVAC control of the facility. This project is to be preceded by a project to replace the rooftop HVAC units with a single VRF HVAC system. In addition to the end-of-life cycle replacement, this would also address the nine rooftop penetrations that would no longer be needed. The area to be addressed is approximately

Proposed Permanent Improvement Project Details

Technical College of the Lowcountry

Description

College seeks to reclaim academic space in Bldg 6 for expansion of Health Science programs. A phased renovation plan entails interior renovation Bldg #8 (Moor Hall) and Building 6 on the Beaufort campus. Interior renovation of Bldg #8 includes the addition of an elevator in order to comply with ADA standards. Bldg #8 is 78 years old, historically significant, and linked to historic Mather School (1868). Vacant for over 18 years, the two-story, 8,700 sq/ft structure is prominent in its location astride a main Beaufort thoroughfare. Load-bearing structure is sound. Building exterior was renovated in 2011. With existing state of its interior, Building #8 cannot be occupied. Only alternative to renovation is demolition. Given historical significance of Moor Hall to the College and local community, renovation should be pursued. Affiliated project is interior renovation of Bldg #6, Beaufort Campus; a single story building (6600 sq/ft), approx. 1/4 academic space, 3/4 administration offices, built 1973, with partial interior renovation in 1993. Interior renovation of Bldg 8, first, will allow consolidation of senior staff and admin support offices (that will include several offices located elsewhere on campus) followed by interior renovation of Bldg#6 with limited exterior renovation to achieve a high quality academic building. The total project cost for interior renovations is expected to be \$5 million.

Description

College seeks to construct a Regional Work Force Development Center at its New River Campus in Bluffton, SC. The need for general education classroom and technical workforce learning programs has outpaced existing classrooms and lab capacity at the New River Campus. A Regional Workforce Training Center will feature general education classrooms, health-science labs, and industrial technology space. Project entails construction of an approximately 40,000 gross square foot building with 10 classrooms, 9 laboratories, faculty/staff offices, student lounge, and flexible industrial labs/technology bays to support projected demand of approximately 1,000 full-time equivalent students. Classrooms and technology bays will allow a variety of classroom arrangements that can be supported by modern instructional technology and IT infrastructure. Project has been on College's Master Facilities Plan since 2007.

Description

Daniel Library was constructed in 1959 (60 years old) and is approximately 56,075 square feet. The original HVAC systems are still in operation although it had an expected lifespan of only 20 years. The building houses the Library, Citadel Museum, Faculty and Staff offices, the Rare Book Room and Archives.

This project would encompass asbestos abatement, replacement of the steam lines, chilled water lines, five air-handling units and controls, and a new specialized air-handling unit in the archive area.

The existing HVAC system is in poor condition with antiquated controls which are beyond repair. The deteriorated condition of the existing HVAC systems has a negative effect on interior air quality for the students and faculty. System failures would preclude the use of the building and cause damage to the contents and historic artifacts due to humidity and temperature. This project is desperately needed to provide proper heating and air-conditioning in all three floors of the building. There are no alternative options.

			(29,000)

Description

This project is a gift in-kind of engineering and construction to replace the existing natural field turf at Johnson Hagood Stadium with synthetic turf. Sansom Field is approximately 85,000 square feet in size, and the natural grass field was originally constructed in 1948. It plays host as the football home of the NCAA FCS Southern Conference Citadel Bulldogs, and is also used for club sports and outside events. Extent of the new synthetic turf shall be the football field itself to include the sidelines between the east and west grandstands, and a section of turf behind each end zone. During the fall football season game days it hosts up to 15,000 spectators, players, coaches and staff. The field also serves club sports events at the college. Other revenue generating events such as high school football jamborees, bowl games, concerts and trade shows could be hosted without fear of damage to the field turf. The current natural field surface has become maintenance intensive, and has extensive drainage and flooding problems.

Description

The project will replace a 20 year old bed modular trailer (VTR) with a 50-52 bed, R-2 modular unit. The current facility with 2,514 SF only accomodates 16 students. The new facility will be approximately 8,000 SF which would accommodate up to 52 students. The demand for the new facility is to house overflow students from the barracks during the fall semester until normal attrition allows for those students to move into the barracks. The remainder of the school year the facility would be used by visiting teams and athletic teams at The Citadel during campus closures over Thanksgiving, Christmas, and spring furloughs, as well as after graduation in May, as needed.

Description

This project replaces the existing Capers Hall academic facility. Capers Hall is a 75,116 SF facility, which currently houses much of the School of Humanities & Social Sciences and the Zucker School of Education. The existing Capers Hall was constructed in two phases in the 1940's & 1970's. The facility does not meet the requirements of current teaching techniques and the physical structure has outlived its useful life. A comprehensive engineering Structural Building Evaluation was completed on this facility in June 2014 to understand the feasibility of modifying the existing structure to meet current seismic standards which led to the decision that it was more feasible to replace the 1940's wing as well in order to best meet seismic codes and modern standards for teaching methods and techniques. Also, there is not sufficient existing facility space to house all of the School of Humanities & Social Sciences departments for current and future requirements. The Lee Avenue face of the replacement 107,700 SF academic building is to closely match the existing facility Lee Avenue alignment. The classrooms and faculty offices will be temporarily relocated to alternate spaces across campus to better facilitate a single phase demolition, and a single phase construction.

Description

This project repairs the exterior building envelope of the administrative offices and athletic club level and suites attached to the West Stands at Johnson Hagood Stadium. Numerous instances of rain water infiltration from the roof of the plaza and the north and south stairwells along with minor exterior facade separation have been realized. This project will identify and repair the sources of the leaks, seal roofs, windows and doors, and repair the damaged interior sheetrock and window and door finishes. Funding for this project is 50% Athletic fees and 50% SC Army National Guard.

Description

Byrd Hall was constructed in 1968 (51 years old) and is approximately 49,675 square feet. The building houses the Chemistry department, classrooms, laboratories, a small auditorium, and faculty & staff offices. This project would encompass an interior renovation (updating interior finishes in corridors and classrooms) as well as a roof replacement, elevator replacement, and the installation of a fire alarm system.

The majority of this building remains in its original 1968 condition. The original elevator is still in operation and is in poor condition with antiquated controls beyond repair. The elevator does not meet current code requirements and breaks down frequently. The existing roof has exceeded its life expectancy and has been patched multiple times. Numerous leaks continue to damage interior finishes. The classrooms and corridors still appear as they did in 1968 and reflect 51 years of use. The original fire alarm system is still in operation, and it is a sounding system only. It does not meet current code requirements and does not report to anyone outside of the building. Elevator failures preclude use of the building for deliveries as well as handicap access, and the roof is beyond repair. There are no other alternatives.

Description

This project reconstructs the East Grandstands of Johnson Hagood Stadium at The Citadel. The former grandstands were demolished in 2017 due to structural, environmental and financial issues. One thousand temporary stands were erected in order to offer patrons a seating option on the east side of the stadium. The temporary stands will be removed and relocated elsewhere on campus, or sold. The project will provide new stadium seating for use at football games as well as other future events. Also, the project will develop a commercial building behind the new stands of approximately 60,000 SF which will be leased to private tenants. The Citadel Real Estate Foundation intends to construct the facility using non-state funds via a ground-lease arrangement with The Citadel in which The Citadel would have no financial obligation related to the project. Currently, the vacated east side of the stadium hinders athletic recruitment and provides for a poor game day atmosphere. Additionally, there is a demand for office space in the Charleston area that makes the project financially attractive.

			(10,000)

Description

Duckett Hall was constructed in 1969 (50 years old) and is approximately 23,900 square feet. The building houses the Biology department, classrooms, laboratories, a small auditorium, and faculty & staff offices. This project would encompass an interior renovation and reprogramming/reutilization of the spaces in the building as well as HVAC and elevator replacement. Scope includes reallocation of spaces for better classroom & office utilization, upgrade laboratory spaces, interior finishes and upgrade electrical, lighting & HVAC systems.

The majority of this building remains in its original 1969 condition. The original HVAC systems are still in operation and are in poor condition with antiquated controls beyond repair. The deteriorated condition of the existing HVAC systems has a negative effect on interior air quality for the students and faculty. System failures of the HVAC would preclude the use of the building.

Description

The Stevens Barracks was originally constructed in 1942 and was refurbished in 1977. Due to the age of the structure, Stevens requires continual maintenance and received renovations in Summer 2017. Based upon a building assessment performed in 2015, notation was made that the majority of the building components would need to be replaced within the next ten (10) years, including the sprinkler syetem, electrical system, and HVAC system. Stevens Barracks is the only wood framed, non-seismic code compliant barracks remaining on campus. This project will bring Stevens Barracks in-line with the cadet housing standards of the other four barracks.

			0

Description

Renovate existing academic office space (3,600 sq. ft.) in Fulp Hall (Health Science building) and convert the space to science labs in support of the growing Bridge to Clemson program.

Projected enrollment growth in the Bridge program over the next 2-3 years will require two additional labs. The space programming and utilization study in the College's recently completed 10 year Master Facility Plan supported the need for these additional labs. The addition of these labs can most cost effectively and efficiently be done by converting academic offices adjacent to other science labs in Fulp Hall and relocating the offices to Miller Hall vacated during recent renovations of Ruby Hicks.

The only alternative would be to find space to add these labs on the Pendleton Campus outside of Fulp Hall, which would be much more expensive and would separate these labs from the remainder of the science programs and not address the issue of overall lack of space to expand on the landlocked campus.

The consequence of not funding this project is the inability to continue to support the enrollment growth projections for this high-demand and highly successful program.

Description

Renovate and repurpose 20,000 sq. ft. of vacated space due to transition of services to the new Student Success Center and Ruby Hicks Hall, and relocate College programs and/or services to Miller Hall based on prioritized needs. Needs include moving Human Resources and Campus Police closer to the front of campus and creation of office space for academic faculty relocated due to the renovation of the College's Health Science building, Fulp Hall. Miller Hall was built in 1970 and the last capital investment in this building, excluding normal building maintenance, HVAC/roof, was completed in 2002. The only alternative would be to not renovate the building to maximize the use of this valuable space in the center of campus. Another alternative would be to demolish the building and leave the space as open green space on campus. Because the Pendleton Campus is landlocked, this alternative is not considered optimal at this time. The consequence of not funding this project is the inability to optimize valuable space on the Pendleton Campus.

Description

Renovate and repurpose 22,000 sq. ft. of Anderson Hall for an Event/Assembly/Exhibition space. This space in Anderson previously housed the College Cafe. The cafe was relocated to the newly constructed Student Success Center and this open space is ideal for events (student orientations, career fairs, other large assemblies, etc.). The College's recently completed Master Facility Plan recognized the need for additional assembly/exhibition space on the campus.

The only alternative would be to not renovate the building and maximize the use of this valuable space in the center of campus. Another alternative would be to demolish the building and leave the space as open green space on campus. Because the Pendleton Campus is landlocked, this alternative is not considered optimal at this time.

The consequence of not funding this project is the inability to optimize valuable space on the Pendleton Campus.

			(79,907)

Description

Renovate existing classrooms on all three floors to make them more efficient, functional, and consistent with the College's active learning delivery mode. Additionally this project contemplates expansion or replacement of the existing stairwells in Oconee Hall to meet current building code. The College's recently completed Master Facility Plan acknowledged that Oconee Hall is the most highly utilized academic building on the Pendleton Campus and whose utilization exceeds the SC CHE utilization standard of 30 hours per week. The current stairwells are code-compliant due to "grandfathered" provisions; however, the stairwells are narrow and could present a life safety issue if not addressed. Additional life safety upgrades are necessary throughout the building. Oconee Hall was built in 1979 and the last capital investment in this building, excluding normal building maintenance, HVAC/roof, was completed in 2004. The only alternative would be to do nothing or demolish the building and rebuild with wider stairwells. Neither of these alternatives is considered acceptable.

The consequence of not funding this project is to not bring the current classroom up to the most current research-based, instructional methodologies or pedagogy or remediate an identified issue with the stairwells.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Tri-County Technical College

Description

Renovation of the current Industrial Technology Center to increase program offerings that focus on training and work force development.

Tri-County's current Automotive Technology program is currently delivered in Wilson Hall on the Pendleton Campus and is designed to prepare students to become proficient, entry-level automotive technicians.

This program has grown from 4.9 FTEs in Fall '11 to 42.7 in Fall '18. Data supports that demand for this program will continue to increase in the future. Additionally, the College is researching the economic need and feasibility of adding Diesel Maintenance to the Automotive Program. Currently there are no diesel training programs in our service area and with the increase in manufacturing this program is in high demand.

Scheduling in the current location is maximized preventing the addition of any additional cohorts. Wilson Hall will not accommodate this growing program or the addition of the diesel maintenance. The plan is to expand and relocate this program to TCTC's Industrial Technology Center in Sandy Springs. This will also free up space in Wilson Hall which can be re-purposed for classrooms or other instructional space on the space-strapped Pendleton Campus.

The alternative to expanding this program in another location on the Pendleton Campus is not feasible as this campus is landlocked.

This program is heavy equipment intensive and has a large footprint. Because space is available at our ITC location, non-College owned sites were not considered as they were not deemed cost effective or necessary at this time.

The consequence of not funding this project is the inability to expand and relocate this program and address the demand in our service area. It will also preclude the College from re-purposing valuable space on the main Pendleton Campus for additional instruction needs.

Description

Renovate existing classrooms throughout Anderson Hall to make them more efficient, functional, and consistent with the College's active learning delivery mode. Anderson Hall was built in 1968 and the last capital investment in this building, excluding normal building maintenance, HVAC/roof, was completed in 2001.

The only alternative would be to do nothing or demolish the building and rebuild. Neither of these alternatives is considered acceptable.

The consequence of not funding this project is to not bring the current classroom up to the most current research-based, instructional methodologies or pedagogy.

Description

This economic development project will renovate the Berkeley County campus to address the challenges of providing transportation, distribution and logistics (supply chain) services to the region; to accommodate the workforce needs of diverse employment sectors; and to increase flexible classroom and training space. Renovated space will house Commercial Driving License (CDL) training and a new diesel mechanic program that will expand the talent pipeline to serve the logistics sector. More than 600 logistics companies now operate in S.C, including transportation and air freight providers as well as warehouse and distribution centers. To serve the transportation and logistics needs of existing and new industries, including the growing manufacturing plants located nearby, the 37-year-old main building on Berkeley Campus must be repurposed. This project will create flexible classroom space for additional training activities as well as economic development functions such as supplier and indirect purchasing outreach events, job fairs, community workforce information sessions and career exploration events. STEM-related renovations will include new science labs, and additional space will provide high-speed broadband access within a learning resources center. This facility will serve as a high-tech workforce training facility for Trident Tech students including apprentices and adults seeking new skills and job opportunities. Berkeley is one of the fastest growing counties in both S.C. and the country.

Description

This project will replace the Thornley Campus underground electrical distribution system to include but not limited to the underground duct bank, high voltage conductors, and transformer switches. The underground electrical distribution system is over 35 years old and is in dire need of replacement. We have experienced many system failures that have caused the College to close for business. A major system failure could potentially close the College for weeks. The alternative is to continue to make costly repairs to the existing system and hope for the best.

			4,000,000

Operating Budget Impact	Fund Group	Recurs	Amount
Utilities	General Funds - Existing	>5 Years	(2,000)
			(2,000)

Description

DESCRIPTION: The project will replace the entire mechanical HVAC system to include air handlers, ductwork, VAV boxes and digital controls. The scope of work will also install a sprinkler system, replace the fire alarm system and provide new lighting. The work will require existing suspended ceilings be removed to access the plenum to remove the existing HVAC system and install a new system. New ceilings will be reinstalled. The occupants of the building will be relocated in two phases. A previous approval only contemplated the replacement of the air handler units due to a shortfall in funding.

JUSTIFICATION: The existing HVAC is 46 years old and has outlived its serviceable life. The system is vulnerable to failure at any time and the project has been the highest maintenance priority for the Aiken campus for many years. Other improvements such as a sprinkler system and a new fire alarm system will update the life-safety aspects of the building to meet current codes.

ALTERNATIVES: The existing building is a significant facility. The systems are at the end of their service life and maintenance and replacement is required.

Phase I has been approved by the State for \$22,500 to cover professional fees.

Description

The project will renovate an underutilized gymnasium space and convert it to academic and office space. Offices for faculty and staff are needed to meet growth in student enrollment. There will also be a large multi-purpose conference center that can double as a classroom(s). Given the fact that the existing space is under utilized, this is the most economical option to increase academic and office space needs.

Description

The HVAC system was installed in 1977 and has not been updated. It is reaching the end of its serviceable life. It no longer provides the needed cooling and HVAC needed for a building of this type. Maintenance has extended the life of the system, but it is now becoming cost prohibitive to maintain. The project will replace air handlers, VAVs, controllers, thermostats, chiller, and associated duct piping and components.

Description

Description: USC Aiken intends to establish a learning commons that brings together library, technology, advising, student support, career services, veterans services and other offices will benefit our students long-term and enhance their experience in a way that promotes increased retention and graduation. The current library is approximately 43,600 square feet. Plans for this renovation include incorporation of an academic advisement center to provide a more functional space for career services. Additional components include both individual and group study rooms, additional collaborative work space areas; an state of the art teaching lab and classroom; and flexible spaces and technology. This renovation would also incorporate an area for an 'Engineering/Innovation Lab', which would house educational technology integral to our growing engineering program curriculum. Justification: The purpose of this effort is to renovate the USC Aiken library into a "learning commons" concept that aligns library and academic support resources for students to assist them in their progression and graduation through the University. Alternatives Considered: Due to current space constraints the opportunities considered were renovation and new construction. USC Aiken believes renovation of existing space is the best and lowest cost option for the University

Description

Maintenance is a continued cost of ensuring the learning infrastructure is managed in a manner to maximize the educational use while maintaining a strong sense of stewardship for the assets and available resources. We are proposing a match on a 1:1 basis whereby USC Aiken would use any proceeds received to address a variety of deferred or appropriate critical repair and related maintenance, and or address any other critical equipment, and systems repair. Key focus is upon using funds on life and safety maintenance matters to maintain an efficient and effective operation of USC Aiken’s educational missions.

University of South Carolina – Beaufort Campus

Description

Description: The Library Expansion Project will include the renovation of two classroom spaces in the Science & Technology Building to become Natural Science laboratories; replace those two classrooms by adding space to an existing building; renovation of the traditional library book stack space into modern 21st century Learning Resource Center; adding academic support space to include faculty offices, seminar rooms, and fabrication space for classroom support materials; adding a technology laboratory to support the growing graphics design and computational science programs. Justification: This facility is needed to provide additional classroom space, with accompanying faculty offices for our growing student population. Since opening, enrollment has increased 62%. USCB's Bluffton campus currently has only 18 general purpose classrooms. As documented in USCB's Facilities Master Plan prepared in 2010, USCB has immediate classroom space needs and a major future classroom space deficit. This space deficit is projected to worsen and, without additional classrooms, become unmanageable over the next 5 years. Additionally, many faculty currently share office space and this problem is projected to worsen. Alternatives Considered: None. USCB is located in a remote area in Southern Beaufort County, there are no viable buildings to lease for the anticipated growth.

Description

Description: USCB will construct a new Academic Classroom Building consisting of approximately 48,500 square feet of floor space. This facility will be adjacent to the Science and Technology building and will be part of the central academic core of the USCB's Bluffton Campus. This new facility will include approximately 12 classrooms, one 40 seat computer classroom, 40 faculty offices, and administrative workspace with 15 work stations.

Justification: This facility is needed to provide additional classroom space, with accompanying faculty offices for our growing student population. Since opening in Fall 2004, enrollment has increased 62%. USCB's Bluffton campus currently has only 18 general purpose classrooms. As documented in USCB's Facilities Master Plan prepared in 2010, USCB has both immediate classroom space needs and a major future classroom space deficit. This space deficit is projected to worsen and, without additional classrooms, become unmanageable over the next five years. Additionally, many faculty currently share office space and this problem is also projected to worsen.

Alternatives Considered: None. USCB is located in a relatively remote area in Southern Beaufort County, there are no viable buildings to lease for the anticipated growth.

Description

This project is to design and construct an approximately 60,000 sq. ft multi-purpose building containing about 3,500 seats to hold convocation, commencement and other University events and activities. The building will be located on the USCB Bluffton campus.

Description

This project is to design and construct an approximately 9,902 sq. ft. building on the USCB Bluffton campus to house the Osher Lifelong Learning Institute. The building will contain a 145 seat auditorium, a 50 seat classroom, a demonstration kitchen, a great room, and OLLI staff offices and workroom.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

University of South Carolina – Columbia Campus

Description

Description: Stage one of the Campus Village Residential Development project will abate and demolish the Cliff Apartments Building and construct four new residential buildings providing no less than 1800 beds and a transportation facility. The development occurs entirely on property owned by the university and bounded by Bull, Whaley, and Sumter Streets, and a railroad right-of-way. Ground-level public functions in the four residential buildings will include dining space, a police sub-station, secure residential lobbies, multi-purpose meeting rooms, a coffee shop, a small retail canteen-style grocery store, and a transportation hub. Five levels of student residential housing occurs above the ground level. The housing environment will be consistent with recently constructed or renovated student housing elsewhere on the campus. The Campus Village has been designed with emphasis on landscaped green space between the buildings and a complete living/learning experience for university students. For more information, refer to the Phasel/Phase II documentation that has been submitted simultaneous with CPIP.

Justification: Extraordinary enrollment growth has mandated the need for additional beds to meet freshman and upperclassmen on-campus housing demand.

Alternatives Considered: Off-campus housing is not considered an acceptable alternative.

Utilities	Other Funds - Existing	>5 Years	(150,000)
			(11,450,000)

Description

The project would construct two modern efficient facilities for the School of Medicine, located closer to the university and clinical partners in Columbia. New facilities reflect a more economical and effective long-term strategy for teaching and research when compared to increasing the already high operational and maintenance costs in order to remain at the historic Dorn VA Center which the university currently leases until 2030. In stage one of the development, a new Medical Teaching Facility will be approximately 130,000 square feet and will include instructional spaces and faculty/administrative office space. Stage two will provide a new Research Facility of approximately 162,000 square feet providing research space and wet labs for numerous university health and science disciplines with associated support spaces, offices, and structured parking. The estimated cost to renovate the leased Dorn VA Center space to become serviceable for another generation of instruction and research is in excess of \$220 per sq. ft. (\$75,000,000) while current annual operations and maintenance expenses of \$5,800,000 are expected to exceed \$8,000,000 annually in the next ten years. Future costly annual operating expenses, exorbitant renovation costs, coupled with expected annual lease payments in excess of \$7,800,000 after 2030, compel the University to consider an alternative location for a new Health Sciences Campus in Columbia.

			(16,165)

Description

Description: The project will renovate the first floor of Jones PSC to adapt space currently allocated to aged chemistry teaching labs to become modern biology teaching labs for the College of Arts and Sciences. The project will gut the basement and first floor at the south wing of Jones PSC. The demolition will include abatement of asbestos and lead paint on these two floors. The first floor upfit will provide four modern biology teaching labs, three prep rooms, a classroom, a collaborative study area, faculty offices and accessible toilet rooms. New mechanical HVAC construction on the fourth level will support the renovated spaces below.

Justification: This project follows a long-range plan for adding and improving science teaching labs that addresses a shortfall of labs made more acute by enrollment growth. Enrollment in biology labs is projected to increase. Adaptively reusing existing space is more economical than constructing a new facility.

Alternatives Considered: Constructing new space will not be as economical as renovations and Jones' location is ideally suited to expand biology teaching.

Professional Services/Fees	50,000	Other Funds - Auxiliary Reserves	3,300,000
	3,300,000		3,300,000

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	General Funds - Existing	5 Years	4,167
			4,167

Description

Description: The project will acquire 300 acres for the purpose of developing outdoor intramural recreation fields and a small support building for equipment storage and restrooms for student use. Portions of the land will also be reserved for athletic practice facilities to support the golf teams. Much of the property is in the flood plain of the Congaree River and consequently the land cost per acre is relatively economical when compared with land in the Central Business District. The land is also flat making it ideal for recreation fields. Development of the site is not included with the land acquisition project and will be a future separate project.

Justification: Our most recent Master Plan has identified, based on current and expected enrollment, a deficit of 16 multi-purpose fields and 6 softball fields. The development of these fields will enable USC to terminate the rec field lease with the National Guard and use those funds for maintenance and operation of the new development. The acreage allocated to the men’s and women’s golf teams, when developed in the future, will be a more convenient location for practice. Currently the teams travel approximately 20 miles to practice at Cobblestone Park country Club.

Alternatives: Perpetuating a severe shortage of rec fields is not an acceptable option.

	1,630,000		1,630,000

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

Description: A comprehensive renovation of the 1908 historic Taylor House. The project will expand upon the minor renovation scope included as part of the Law School construction and other recently completed maintenance needs projects. New work covered by this project will include the replacement of windows where historic windows have been removed and other restoration to the exterior. Interior renovation will restore certain architectural elements and will entirely replace the home's mechanical, plumbing and electrical system. An elevator will be incorporated into the building. The renovation will include necessary functional modifications.

Justification: The Taylor House will most likely accommodate the Rule of Law Center which is affiliated with the School of Law. Relocating the Rule of Law to the Taylor House will create space on campus which can accommodate other academic functions.

Alternatives Considered: The Taylor House is a fine historic structure and must be preserved. The house is long overdue for a renovation and the option of allowing the house to deteriorate is unacceptable.

Description

Description: The project will comprehensively renovate the residential portion of Thornwell College to include replacement of mechanical and electrical infrastructure and replacement of interior finishes. Electronic access door hardware will be added to unit entrances to match university housing standards. Windows will be evaluated to determine if they require replacement.

Justification: The residence hall has not been renovated in decades and requires systems replacement and new finishes to be consistent with the quality and functionality of other university housing.

Alternatives Considered: There is no alternative to conducting this maintenance and electrical enhancement if the building is to be retained and continue to serve the University.

			325,322

Description

Description: The Honors College Expansion will construct a third wing for the existing Honors College Residence to complete the development of this project as originally planned. This proposed third wing would provide a combination of student residential suites, faculty offices, classrooms and meeting spaces to serve the Honors College. The addition will contain approximately 48,000 square feet with classrooms and offices on the first floor, other academic and support space in the basement, and approximately 130 beds above on four residential floors. This will expand the living learning environment created during the original construction of the Honors College building.

Justification: The additional beds and academic space will respond to enrollment growth in the Honors College.

Alternatives Considered: The project completes the original master plan for the Honors College Building. Other Honors College buildings have been recently renovated and their beds are maximized to the extent possible.

	1,850,000		

Operating Budget Impact	Fund Group	Rekurs	Amount
Maintenance and Repairs	General Funds - Existing	>5 Years	(66,000)
			(66,000)

Description

Description: The project will replace the natural grass turf surface of three outdoor recreation fields located adjacent to the Strom Thurmond Well Center. The fields are used by the student population for intramural athletics. The existing turf will be removed, the land regraded, and a new artificial turf system will be installed with engineered drainage.

Justification: Artificial turf is superior to natural turf in this situation due to the frequency of the use that these fields must sustain. Savings from not maintaining and restoring natural turf will ultimately be realized.

Alternatives: Maintaining natural turf is considered less practical.

Maintenance and Repairs	General Funds - Existing	>5 Years	19,614
Utilities	General Funds - Existing	>5 Years	28,476
			48,090

Description

Description: The project will acquire approximately 1/2 of an acre on a city block that is bounded by Assembly, Greene, Devine and Main Streets. The entire remainder of the block is owned by the university. The parcel to be acquired contains three existing buildings- a residence, a church community building and a small church. The buildings will serve the College of Music for performance, tutoring and student practice. The parcel and the buildings will be donated to the university with no acquisition cost.

Justification: The College of Music needs additional tutor and practice space. The church's sanctuary space can be used for orchestral performances. The three buildings are situated near to the College of Music.

Alternatives Considered: The availability of these donated buildings makes the acquisition a superior option compared to constructing new facilities with the construction cost being borne by the university.

	6,500,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	Other Funds - Additional	>5 Years	30,000
Utilities	Other Funds - Additional	>5 Years	10,000
			40,000

Description

Description: The project will develop up to 800 surface parking spaces adjacent to the Greek Village in multiple phases of work and on two parcels of land. Primary vehicular access to the parcels will be from Devine Street and Gadsden Streets. There will be pedestrian and vehicular access directly to the Greek Village under the Blossom Street bridge. Two existing one-story industrial buildings will be demolished to create space for the surface parking on the parcel of land between Blossom Street and Devine Street. The cost to relocate academic programs in these buildings is included in the project budget to renovate other interior space in an existing building currently partially occupied by USC.

Justification: The project will respond to a shortfall of parking which has occurred due to the extraordinary growth in Greek life participation. Greek students return to their respective houses for meals and for those who drive, parking has become an acute problem. For the larger organizations, only a small percentage of a fraternity's or sorority's members actually live in the house thus many members commute.

Alternatives Considered: Shuttle service to the village exists but there is still a demand for parking service as many upperclass students live off-campus and commute to have meals at the fraternity or sorority house.

			(3,000)

Description

Description: The project will remove the existing roof and replace it with a new membrane roof. The new roof will provide a twenty-year warranty. The roof area is approximately 41,000 square feet. The roof replacement was not included in the recently approved renovation which was limited to interior maintenance and renovation. Funding is now available and the project will be bid directly to a roof contractor avoiding general contractor mark-up.

Justification: The University must maintain roofs to protect the interior against moisture intrusion.

Alternatives: No alternatives exist as the life span of the existing roof has been exhausted.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

University of South Carolina – Columbia Campus

Description

Description: The project will develop outdoor intramural recreation fields for student use. The number of fields to be developed in this first phase will be determined by the limits of the project budget. The project will also develop a roadway for access, parking, lighting and irrigation to support the fields. A toilet facility building will be erected to serve the students and provisions for equipment storage.

Justification: Our most recent Master Plan has identified, based on current and expected enrollment, a deficit of 16 multi-purpose fields and 6 softball fields. The development of these fields will enable USC to terminate the rec field lease (rent) with the National Guard and use those funds for maintenance and operation of the new development.

Alternatives: Perpetuating a severe shortage of rec fields is not an acceptable option.

	2,850,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	Other Funds - Existing	>5 Years	(50,000)
			(50,000)

Description

Description: The project will replace the roof membrane in its entirety. The existing roof membrane is over 20 years old, beyond its warranty and allowing water to intrude into the building. The new roof will be a white TPO membrane with a 20-year warranty. A portion of the existing rigid insulation has been ruined by moisture and must also be replaced. The Phase I analysis will enable the university to establish how much insulation must be replaced. The project will also address moisture that is intruding at clerestory window glazing.

Justification: Intruding moisture from roof and wall leaks is damaging interior finishes and impairing the use of the arena. The existing roof is over 20 years old and must be replaced to restore the envelope to its original integrity. Funds are being expended annually to patch the roof and repair damage from leaks.

Alternatives Considered: Allowing a roof and exterior wall to continue to leak is not considered to be an acceptable option. The roof system proposed for the replacement is similar to the original and is typical for a building of this type.

Maintenance and Repairs	General Funds - Existing	Indefinitely	35,180
			35,180

Description

DESCRIPTION: The project will execute maintenance work needed to reoccupy and utilize the historic Horry-Guignard House (circa 1813) for the Veterans Legal Clinic. Work will include addressing water intrusion at the basement and mechanical and electrical system upgrades. Structural remediation is needed at the wood floor structure. The renovation scope will sensitively adapt the house to serve as a location for the Veterans Legal Clinic, other Veterans Administration support services, and potentially a Constitution Law Resource Center.

JUSTIFICATION: The exterior was recently restored through a limited maintenance project. This new project will enable occupancy so that the house can be utilized to serve the veteran clinic which is operated in association with the School of Law located immediately behind the house. The Horry-Guignard House is listed on the National Register of Historic Places and must be preserved. Revitalizing the property for the noble purpose of supporting veterans is considered to be an ideal use for the house.

ALTERNATIVES: Alternatives include finding a remote campus location for the Veterans Legal Clinic not near to the School of Law. This alternative is undesirable when compared to the opportunity of locating the Clinic near the School of Law where faculty, staff, administration and parking already exist to support the Veterans Legal Clinic.

Description

Maintenance is a recurring cost of ensuring the learning infrastructure is managed in a manner to maximize the educational use while maintaining a strong sense of stewardship for the assets and available resources. We are proposing a match on a 1:1 basis whereby USC Columbia would use any proceeds appropriated state funds received to address a variety of deferred or appropriate critical repair and related maintenance, and address any other critical equipment, and systems repair. Key focus is upon using funds on life safety maintenance matters, repair of building envelope, and repair and replacement of critical building systems such as HVAC, plumbing, and electrical systems to maintain an efficient and effective operation of USC Columbia’s institution’s educational missions. Significant E&G buildings that require capital renewal include the Swearingen Engineering Center, the Humanities Classroom Building, the Welsh Humanities Office Building, Coker Life Sciences Building, and Jones Physical Sciences Building. Based on recent building condition reports, and the 2017 CHE Building Condition Survey, these buildings have the most significant maintenance and repair needs.

Description

Description: The historic War Memorial Building was constructed in 1935 to honor the military personnel who served in World War I. Currently, the building is used for office space. This project will return the building to assembly occupancy and provide public accommodation for student and University events. The first floor could serve as exhibition space and the second floor could serve as a lecture hall or event space. Work will include exterior restoration including window refurbishment and limestone cleaning and interior renovation of historic finishes. Renovations are to include the addition of an elevator, life safety egress stairs and restrooms to comply with life safety code and accessibility requirements. Mechanical, electrical and plumbing systems will be upgraded/replaced. This project will alleviate all existing maintenance needs.

Justification: The project is needed to address maintenance issues in the building, upgrade/replace building systems as needed, address accessibility and life safety code issues, and to restore the building to a use more compatible with the original building design.

Alternatives Considered: The alternative to this project is to continue to use the building for office functions in its existing condition and deferring maintenance needs.

Description

Description: The project will comprehensively renovate Woodrow College which is a historic residential building in the historic core of the campus. The renovation will include replacement of finishes, mechanical, plumbing, electrical and life safety equipment maintenance and replacement.

Justification: The University must routinely execute maintenance projects to ensure residential buildings are safe and functional. The building is a contributing resource to the university's historic campus and must be maintained. Renovation is a more economical alternative to replacement.

Alternative: Not maintaining the historic building is not feasible, therefore no alternatives exist.

--------------------------------	-------------------	---------------	---------------

Description

Description: Acquire property near the Gamecock Park for use to construct an indoor tennis facility for both NCAA competition and student intramural use. Outdoor courts would also be developed on the site.

Justification: There is a shortage of tennis courts for student use and inclement weather impacts the ability Athletics to hold NCAA tournaments.

Alternatives Considered: The University is still evaluating options to lease space in existing facilities, however, there are currently no good options in lieu of construction. If a facility were to be constructed by a private entity, a leasing arrangement would be considered.

--------------------------------	-------------------	---------------	---------------

Description

Description: The Indoor Tennis Facility project will construct an indoor facility to house six (6) regulation tennis courts and associated support amenities. The project has been contemplated in the planning of the Athletics Village for many years. Additional outdoor courts may also be developed to support a demand from students for intramural tennis.

Justification: The project is required to provide indoor facilities for the men’s and women’s tennis teams in the event of inclement weather and to accommodate winter matches and/or tournaments. The teams currently have no indoor facilities.

Alternatives Considered: The university is still evaluating options to lease space in existing facilities, however, there are currently no good options in lieu of construction. If a facility were to be constructed by a private entity, a leasing arrangement would be considered.

Site Development	750,000		
	6,000,000		

Operating Budget Impact	Fund Group	Recurs	Amount
--------------------------------	-------------------	---------------	---------------

Description

Description: The project will construct a new remote storage facility for library books, periodicals and other resources. The building must provide reliable and strictly controlled environmental conditions.

Justification: The existing Annex is nearly full and a new facility will allow the library to continue relocating resources from the valuable space at the Thomas Cooper Library. Space that was once occupied by books is routinely repurposed for student study space consistent with national trends in higher education. The Annex is cheaper than a library expansion in the core of campus. Books can be routinely retrieved from the Annex upon request.

Alternatives: Constructing other more expensive space on campus for critical study space to enable the books to remain at the Thomas Cooper Library is considered less desirable and ignores trends which support moving books to peripheral locations.

Description

Description: The project would comprehensively renovate the 49 year old residential building which has 184,541 gross square feet. The scope of work will include the replacement of windows and exterior caulking for returning water-tight integrity and enhancing energy efficiency. Interior work will include the abatement of asbestos and lead paint. New finishes, mechanical, plumbing, electrical and life safety systems will be replaced throughout.

Justification: Most building systems are at the end of their serviceable life and require replacement and maintenance.

Alternatives: The building is an iconic tower at the east end of the campus and renovation is considered to be the most economical option at this time.

Operating Budget Impact	Fund Group	Recurs	Amount
-------------------------	------------	--------	--------

Description

The project will address campus-wide maintenance needs. These maintenance items focus on providing a safe and productive learning environment on campus. Maintenance items include:

- Physical Plant Repairs - \$1,500,000, Renovations for Bradley Building, Dowling Building, and Bradley and Gregory Wellness Center HVAC upgrades
- Parking Lot Repaving - \$500,000, Parking lots for the Gregory Health & Wellness Center and Dowling Building need resurfacing, restriping and repairs made to the curbing.
- Athletic Field Upgrades - \$100,000, Access to the soccer field for athletes and spectators needs to be upgraded at USC Lancaster for safety and accessibility purposes. This project will define a pedestrian access to the field behind the Dowling building. Playing surface improvements are needed for athlete safety and to maintain NJCAA requirements.
- Landscaping Improvements - \$250,000, USC Lancaster will continue to build on exterior improvements defined in the campus master plan. The upgrades will improve campus safety by directing students to defined road crossings and delineating a parking area for food trucks on campus.

	100		100

Project Costs	Amount	Fund Sources	Amount
Contingency	500,000	Initial Request	
Professional Services/Fees	500,000	State Funds - Appropriations	5,000,000
Site Development	4,000,000		5,000,000
	5,000,000		

Operating Budget Impact	Fund Group	Recurs	Amount
Maintenance and Repairs	General Funds - Existing	>5 Years	20,000
Utilities	General Funds - Existing	>5 Years	4,000
			24,000

Description

Description: The project will construct a pedestrian bridge over the Route 9 Lancaster Bypass Roadway. The length of the bridge is estimated to be approximately 150' – 180' to span the roadway with additional site development of the access stairs, ramps, and potentially an elevator. The bridge is anticipated to be pre-engineered steel with a concrete walking surface.

Justification: USC Lancaster students frequently cross Route 9 from campus to access retail development on the opposite side of the road. The wide roadway is heavily travelled by vehicular traffic making it dangerous for pedestrians to cross.

Alternatives Considered: Other pedestrian amenities such as signage, better lighting and speed reduction are not considered adequate or superior to a bridge that will separate pedestrians from the vehicular traffic altogether.

Interior Renovations	965,200		2,413,000
Professional Services/Fees	241,300		
	2,413,000		

Description

The project will address maintenance items campus wide. These maintenance items need to be addressed in order to provide a safe and productive learning environment on campus. Maintenance items include:

- Campus Signage (Allendale and Walterboro): \$315,000, Update signage on both campuses.
- Science and Administration Building (Allendale): \$400,000, New roof in response to multiple leaks
- Main Building (Walterboro): \$1,000,000, Roof evaluation to determine how to ensure its longevity and implementation of that plan and building mechanical repairs/upgrades.
- Spruce Hall (Allendale): \$200,000, Exterior painting and plumbing improvements.
- HVAC (Allendale and Walterboro): \$30,000, Replace HVAC units
- Faculty House, Art House, and Athletic Information Buildings (Allendale): \$468,000, Due to the age and condition of these buildings, it is cost prohibitive and unjustifiable to improve these inefficient buildings for campus use. These buildings need environmental studies, demolition, and clean-up of the area left behind.

Other Costs	125,000		
Professional Services/Fees	225,000		
	2,250,000		

Description

Description: Renovate the current 23,000 square foot building to provide classrooms and laboratories for the Math, Science, and the Engineering Division. Renovation also includes office space for division faculty.
The scope of work will include continuing upgrades to science labs which will replace HVAC systems, electrical systems, and equipment. Other renovations will include maintenance to the exterior skin and interior finishes.
Justification: Current laboratory facilities are over 50 years old. These outdated labs also have to double for lecture rooms. Air quality, health, and safety are major issues.
Alternatives Considered: New construction was considered but determined to be less economical.

	7,750,000		

Description

Athletics Facility: \$7,000,000

The USC Sumter Fire Ants athletics teams have expanded in recent years and are significant for recruitment. As new sports have been added, USC Sumter has outgrown the current athletic facilities both for practice, competition and administration. The indoor basketball court is decades old and unsafe for competitive basketball. This project will replace the current facilities with an updated facility that will meet the current needs and allow programs to expand.

Softball field: \$750,000

The USC Sumter Fire Ants Softball team has expanded in recent years and has become significant for athletic recruitment. Currently, the team does not have a competition quality playing field. The practice field is inadequate and unsafe. This project will replace the current practice field with a new field that will meet the practice needs and competition needs of the softball team.

Maintenance and Repairs	General Funds - Existing	>5 Years	15,000
			15,000

Description

DESCRIPTION: The project will authorize USC Upstate to acquire 5.64 acres of private property that is within the campus realm.
 JUSTIFICATION: The acreage will enable the future realignment of the curvilinear drive accessing the west side of the campus from Valley Falls Road. The effect of realigning the road would provide a more direct and safer entrance to the west side of the campus and, more importantly, enable the creation of a running track and parking adjacent to existing recreation fields.
 ALTERNATIVES: No alternatives were considered. The landowner intends to sell the property and it is ideally located to serve the university.

Other Expenses	General Funds - Existing	>5 Years	34,000
Utilities	General Funds - Existing	>5 Years	42,000
			113,000

Description

Description: The project will continue the interior renovations of Smith Science Building to improve existing instructional labs.
Justification: There is a need for improving labs to meet student demand for an effective learning environment and to provide proper ventilation for health and safety concerns. This second phase of work in the Smith Science Building is concentrated on further interior renovation of the existing labs in the building.
Alternatives Considered: Not improving existing labs is not considered a viable alternative. Incidentally, for purposes of efficiency, USC Upstate intends to explore the option of combining the \$3,000,000 of 2019 appropriated state funding with the 2018 funding so that this action will increase the area of the building that may be renovated in a single project. A future third phase of work will expand the building for additional instructional labs.

Description

Maintenance is a continued cost of ensuring the learning infrastructure is managed in a manner to maximize the educational use while maintaining a strong sense of stewardship for the assets and available resources. We are proposing a match on a 1:1 basis whereby USC Upstate would use any proceeds received to address a variety of deferred or appropriate critical repair and related maintenance, and or address any other critical equipment, and systems repair. Key focus is upon using funds on life and safety maintenance matters to maintain an efficient and effective operation of USC Upstate’s educational missions.

COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

University of South Carolina – Upstate Campus

Description

Description: This project will remedy major HVAC issues and replace the roof. Installation of new fire sprinkler system will be evaluated and added if code requires.

Major renovations to the interior spaces, (70,250 gsf), and new addition, (25,000 gsf), to create Library improvements needed to meet current needs from many previous years of student growth and projected future growth.

Justification: In the current Library Building, the HVAC is past its life cycle and parts are virtually non-existent. Minor up-fits for program growth have been hampered by the HVAC distribution system. The teaching and learning environment is compromised for most of the year as mechanical equipment and air distribution is inefficient and inadequate. Renovations and expansion of space is needed to match growth

Alternatives Considered: We continue making minor repairs to equipment as required. We have considered furniture replacement to improve some inefficiencies but will need significant expansion to meet growth.

Description

Reroof Anderson VR Center building consisting of approximately 26,750 square feet of roof deck with a white reflective roofing system. Remove existing built-up roof then apply roof insulation and SBS smooth-granular surfaced modified bitumen roofing system with associated flashings and metal work. The project may require removal and disposal of asbestos containing roofing and flashing materials.

The roof is approximately 30 years old and has exceeded its life expectancy.

Alternative: Do not replace the roof.

Capital Reserve Bill H5002 2016 provides \$112,000 for this project.

Description

At its offices and work training centers throughout the state, SCVRD has 77 HVAC systems that are more than 15 years old. All of these units use HCFC-22 or R142b refrigerants, which will no longer be produced or imported after 2020, and will be available only through stockpiled quantities. SCVRD will work with the State Energy Office in assessing all aging HVAC units and developing plans for replacement or repair. Replacement will also assist agency in achieving the State Energy Office's required 20% reduction in energy usage by 2020.

Professional Services/Fees	33,011	State Funds - Contingency Reserve	100,000
	185,000		185,000

Description

Replacement of HVAC system in the Auditorium Building which consists of 8,320 square feet. The system is more than 13 years old and has been evaluated by an independent contractor after we had recent issues that resulted in significant repairs that will only keep the system patched up in the short run. That evaluation showed spelled out the estimated costs to set a new 40 ton system consisting of two (2) 20 ton condensing units and one (1) 40 tone condensing unit plus all connection parts, piping, duct work and estimated labor related to removal and installation. Agency concerns are that we host graduation ceremonies for our students in June for all classes completed during the fiscal year and any degradation of HVAC will require significant contingency if we do not upgrade the system prior to the end of the school year (June 2020). Alternatives are limited but a one for one replacement seems to be the most cost effective course of action according to industry professionals.

Interior Renovations	165,000	State Funds - Capital Reserve Fund	300,000
	300,000		300,000

Description

This project is to improve security in the classroom building by installing doors with new hardware that will close and lock to the inside of the classroom building allowing staff to secure the doors in case of an emergency or a security breach. We also intend on updating the tile floors from the original 50 year old tile to a more modern maintenance free tile and creating a Wil Lou Gray floor logo to the main entrance of the classroom building. The change to the floors will require some asbestos abatement and removal. The upgrades will also require new code base and painting of all hallway surfaces.

STATE OF SOUTH CAROLINA
COMPREHENSIVE PERMANENT IMPROVEMENT PLAN

Proposed Permanent Improvement Project Details

Williamsburg Technical College

Description

WTC has established a need for a Science and Technology building to meet the needs of the college. The preliminary plans include classrooms and labs to support Science, Allied Health, and advance manufacturing/welding. The building will also house student center /study areas and office space.

The Science and Technology Building will provide the space for expanding programs, enrollment growth and updated labs and educational space. Last building was completed in 1985 when our enrollment was 421 that has nearly doubled.

WTC has looked into purchasing and renovating existing building in our area. However the buildings that are currently available are not cost effective to bring up to code to meet our needs. As local buildings become available the college continues to assess the feasibility for renovation and repurposing.

Williamsburg Technical College

Project	Weatherazation energy and infrastructure upgrades	Plan Year	2021
Reference	T380-P-2021-1010	Plan Year Priority	2/2
Submission Type	CPIP Submission - Resubmission	Overall Priority	2/2

Project Type	Percentage	Facility Type	Percentage
Repair/Renovate Existing Facility/System	100	Agency/Institution/Campus Wide	100
	100		100

Project Costs	Amount	Fund Sources	Amount
Exterior Renovations	750,000	Previously Requested	
Other Permanent Improvements	500,000	State Funds - Appropriations	1,250,000
	1,250,000		1,250,000

Operating Budget Impact	Fund Group	Recurs	Amount
Utilities	Other Funds - Existing	Indefinitely	(3,500)
			(3,500)

Description

The project includes comprehensive weatherization and energy performance upgrades to the building envelope, and upgrading infrastructure campus wide. The project will include replacing windows and exterior doors, sealing existing joints and seams and recladding exterior walls with more energy efficient weather impervious materials. The project will also include infrastructure upgrades and repairs campus wide. The lighting and sidewalks are the original from the year 1969 with the basic repairs that were necessary to address safety issues. These systems must be replaced to address safety and mobility issues.

WTC buildings were constructed in 1969 and 1985. The windows and doors are the originals and have recieved repairs maintenance over the years. Due to age of facilities it is now more cost effective and energy efficient to replace them. The infrastructure campus wide needs to be updated with priority given to sidewalks and lighting. WTC needs to remove and replace the walkways and outdoor lights. These upgrades will provide energy efficiency and safety, resulting in improved student learning environments.

	100		100

Project Costs	Amount	Fund Sources	Amount
Contingency	200,000	Fully Collected/Committed	
Professional Services/Fees	200,000	Federal Funds	1,200,000
Utilities	1,600,000	State Funds - Appropriations	800,000
	2,000,000		2,000,000

Operating Budget Impact	Fund Group	Recurs	Amount
-------------------------	------------	--------	--------

Description

This project is a component of the Winthrop Strategic Risk Management plan and will replace the 46-year old electric distribution system. The main substation will be replaced by a substation with five 4,160-volt circuit breakers and wiring that would be significantly more reliable. Currently, only four of five circuit breakers continue to function and the connecting wiring is at the end of its useful life. Despite regular and careful maintenance, ongoing issues with cracks and leakages create a potential for system failure. While the need for this type of project may not be apparent to students, faculty, and staff, it will enhance the university's capacity to provide a learning and living environment that is dependable, safe, and efficient, meeting Winthrop's sustainability and energy efficiency goals while reducing the university's vulnerability to system failures.

Description

This project is a component of the Winthrop Strategic Risk Management plan and will replace the underground steam and condensate pipes that date back to the 1960's and serve thirteen campus buildings. Despite regular and careful maintenance, the steam network is at substantial risk of failure and operates inefficiently as a result of extensive cracks and leakages. While the need for this type of project may not be apparent to students, faculty, and staff, it will enhance the university's capacity to provide a learning and living environment that is dependable, safe, and efficient, meeting Winthrop's sustainability and energy efficiency goals while reducing the university's vulnerability to system failures.

Description

This project is a component of the Winthrop Strategic Risk Management plan and will replace and/or upgrade the university's fire alarm systems in the following buildings: Johnson Hall, Bancroft Hall, Joynes Hall, and Thurmond Hall. Project will also include the design and installation of sprinkler system in Rutledge Hall. Although the systems have been regularly maintained, the replacement parts have become scarce and the software used is no longer supported. Upgrades include adding a new central receiver in our Police Department, rewiring building interiors, and replacing and adding additional strobes, horns, public notification screens, and pull stations to meet current standards. NOTE: The scope of this project has changed requiring funding request increase.

Description

Covered under this project is an expansion of the Dalton Hall Science facility to add teaching labs, classrooms, and faculty offices. The expansion would benefit Biology, Biochemistry, Chemistry, and Human Nutrition programs which are experiencing growth that create stress on the current facilities has strained the space availability. In addition, all Winthrop students are required to take a laboratory science class, creating a greater need for lab space. The programs and degrees offered in this facility produce graduates who attend both South Carolina medical schools as well as programs for physical therapy, nursing, industry, forensics, pharmacy study, medical research, materials research and development, and human nutrition. Such facility improvements will support traditional and returning adult students as they hone their technology skills in an array of laboratories and equipment in demand throughout medicine, business and industry. Students majoring in Biology, Chemistry, and Human Nutrition have increased by double digit percentages. These programs require students to participate in practical applications of the knowledge learned through undergraduate research or internships/practica. Additional specialized learning spaces are needed for the growing number of students in these programs.

Description

This project is a component of the Winthrop Strategic Risk Management plan and will address mechanical systems replacement and upgrades to Kinard Hall. While the need for these types of projects may not be apparent to students, faculty, and staff, they will enhance the university's capacity to provide a learning and living environment that is energy and cost efficient, dependable, and safe, thus reducing the university's vulnerability to system failures.

Description

The proposed addition will add a much needed practice area for the teams of our varsity sports programs. Currently the main arena floor is the practice space for men’s and women’s varsity basketball and women’s volleyball. The 58,000 sq. ft. plan shows the space of with full size basketball/volleyball court and stands for tournament play. It also contains an 8000 sq. ft. weight room, team room, two locker rooms, two offices, concessions, restrooms and 15 future offices on the second floor.

Description

This project is to renovate and repurpose Bldg K. Built in 1974, the 19,176 SF building is also outdated and in need of modernization. Bldg K is former home of our food services and student activities center. With these functions moving to our new Learning Commons, there is a need for more flexible academic space and student support services. The College proposes to renovate the building so that it can be used for student orientations, enrollment management, student support, classrooms, public safety services, and other functions to support students success. The empty space needs to be utilized to benefit students justifying the reason to repurpose and renovate. Building a new building is another alternative, however it would add additional ongoing operating expenses. The College would prefer to repurpose space anytime it can to maximize space utilization and avoid additional operating expenses. *****Proviso 25.9 redirected \$6,500,000 to Bldg K & East Perimeter Rd projects. \$2,407,482 has been allocated toward East Perimeter Road. College will request remaining \$ 4,092,518 to be allocated toward Bldg K or Bldg H Renovation. Estimated total project costs not increased but values were revised based on recent feasibility study.

Description

This project is to renovate Bldg H. Built in 1970, the 15,000 SF building is also outdated and in need of modernization. This building houses the college's administrative staff and has not undergone any changes since offices in the IT area were remodeled and a new HVAC system was installed in the rear half of the building in 1996. Carpets, walls, HVAC, and lighting need to be modernized to provide a better work environment that is more energy efficient. Exterior Facade and site improvements would also be beneficial to the modernization. The college has held off renovation of this building because the first priority must be spaces used by students. Building a new building is another alternative, however it would add additional ongoing operating expenses. The College would prefer to renovate/repurpose space anytime it can to maximize space utilization and avoid additional operating expenses. ***Proviso 25.9 redirected \$6,500,000 to Bldg K & East Perimeter Rd projects. \$2,407,482 has been allocated toward East Perimeter Road. College will request remaining \$ 4,092,518 to be allocated toward Bldg K or Bldg H Renovation. Estimated total project costs increased \$69,834 based on recent feasibility study completed in May 2019. Revisions to line items made based on study.

Description

This project consist of renovations and improvements to the Baskins Road corridor which currently separates Building M from the main campus. The scope includes repaving Baskins Rd, adding curb & gutter, improving storm drainage, utility relocates, pedestrian/street lighting, new sidewalks and a mini-roundabout . Baskins Road is a over 20 years old and in need of repair. This corridor is very dark at night which provides an unsafe area for students crossing and vehicular traffic. The addition of a mini-roundabout per the City of Rock Hill's recommendation along with closure of an unnecessary entrance will help calm traffic flow. Also, the relocation of an existing crosswalk per SC DOT recommendations and addition of lighting will provide better visibility. Connection of the campus Frontage Road to Baskins Road will complete northern perimeter road for the campus supporting the Campus Master Plan and mission to maximize student success. A larger roundabout solution was considered but was less cost effective. The City of Rock Hill and SC DOT agreed that the mini-roundabout would work for the volume of traffic at this intersection.
