

VC Summer AP1000 Units 2/3

- Interest in the 2216Mw VCS plant has resurged after the Fall '24 white paper.
- Working with Centerview Partners, we created an RFI package for the industry
- So far there have been 65+ parties interested, and numerous site visits conducted
- SC plans to evaluate proposals and select an approach by summer.

We continue to support the RFI effort with our existing site team to perform limited site cleanup, scaffolding (for inspection access) and historic document retrievals as requested.

In parallel we are checking certain inventory items, underground installation %, and clarifying what we can about the material status of the facility in response to questions.
